

Document Title	Specification of Ethernet
Document Title	Interface
Document Owner	AUTOSAR
Document Responsibility	AUTOSAR
Document Identification No	417

Document Status	published
Part of AUTOSAR Standard	Classic Platform
Part of Standard Release	R24-11

	Document Change History					
Date	Release	Changed by	Description			
2024-11-27	R24-11	AUTOSAR Release Management	 IEEE1722 streams support Independent VLAN learning support Editorial changes 			
2023-11-23	3-11-23 R23-11	AUTOSAR Release Management	 New chapters for: Firewall support Communication Editorial changes 			
2022-11-24	R22-11	AUTOSAR Release Management	 Migration from word document to LaTex Changed [SWS_EthIf_00498] and [SWS_EthIf_00504] to Valid New chapters for: CellularV2x (V2X for China) CAN-XL MACSec Editorial changes 			

		\triangle	·
			Updates on 10BASE-T1S
			EthenetWakeOnDataLine Specification items valid (no "Draft" tag)
			Clarification on Return codes and error reporting
2021-11-25	R21-11	AUTOSAR Release	Updates on ReworkofPNCrelatedCom- MandNMhandling Concept
		Management	Clarification on "Synchronous/Asynchronous" APIs
			Removed section EthIfSwitchTimeStampIndicationConfig
			Removed [SWS_EthIf_00248]
			Update uptraces of Security Event tables
		AUTOSAR Release Management	Introduction of Security Event reporting (DRAFT)
2020-11-30	R20-11		Introduction of EthernetWakeupOnDataline (DRAFT)
			Introduction of 10BASE-T1S (DRAFT)
			Some empty pages removed
			API Table for EthIf_MainFunctionRx_ <priorityprocessing shortname=""> corrected</priorityprocessing>
			EthSwt_PortModeType introduced to explicitly distinguish between Port Mode and Transceiver Mode
2019-11-28	R19-11	AUTOSAR Release Management	Missing and duplicate service IDs corrected
			Missing API of EthSwt and EthTrcv are added in EthIf
			"BSWDistribution" CONC_643 added as draft
			Changed Document Status from Final to published

			•
2018-10-31	4.4.0	AUTOSAR Release Management	 Explicite link control in Ethernet transceiver minor corrections / clarifications / editorial changes; For details please
			refer to the ChangeDocumentation
2017-12-08	4.3.1	AUTOSAR Release	Improved transceiver tests (Signal quality)
		Management	 Enhanced sequence charts (Ethernet switch handling)
			Diagnostics access APIs added
		AUTOSAR	gPTP Timestamp rework
2016-11-30	4.3.0	Release Management	Ethernet Switch enhancements (Port Groups)
			Wireless Ethernet support
	4.2.2	AUTOSAR Release Management	EthIf_TransceiverInit and EthIf_ControllerInit removed
2015-07-31			_
			 Development Error Tracer renamed to Default Error Tracer
2014-10-31	4.2.1	AUTOSAR Release Management	 Change from Synchronous to Asynchronous API gPTP Timestamp Support Ethernet Switch Support
			Ethernet Wakeup Support
2014-03-31	4.1.3	AUTOSAR Release	Extended UL_RxIndication
2019 00 01	1.1.5	Management	Editiorial changes
			Introduction of Eth_GeneralTypes.h
			Support of API deviation for asynchronous implementation
2013-10-31	4.1.2	AUTOSAR Release Management	Changes in API of EthIf_ProvideTxBuffer and EthIf_SetPhysAddr
			Editiorial changes
			Removed chapter(s) on change documentation

 \triangle

			Remove "Comercial Off The Shelf" use
		AUTOSAR	case
2013-03-15	4.1.1	Administration	VLAN support
			1000MBit Ethernet support
2011-12-22	4.0.3	AUTOSAR	Description of payload data in
2011-12-22	4.0.3	Administration	EthIf_Cbk_RxIndication adapted
			Further post-build configurable parameters
2010-09-30	3.1.5	AUTOSAR Adiministration	EthIf_MainFunctionTx functional requirements improved (functionality split)
		Administration	'Instance ID' removed from Version Info (concerns EthIf_GetVersionInfo API)
			Additional development error in EthIf_GetVersionInfo API
2010-02-02	3.1.4	AUTOSAR Administration	Initial Release

Known Limitations

Currently, chapter 5 Dependencies to other modules does not describe the versions of dependent modules. Thus, a version check will extend the chapter.

1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module Ethernet Interface.

In the AUTOSAR Layered Software Architecture [1], the Ethernet Interface belongs to the ECU Abstraction Layer, or more precisely, to the Communication Hardware Abstraction.

This indicates the main task of the Ethernet Interface:

Provide to upper layers a hardware independent interface to the Ethernet Communication System comprising multiple different wired or wireless Ethernet controllers and transceivers. This interface shall be uniform for all Ethernet controllers and transceivers, as well as Cellular V2X controllers. Thus, the upper layers (TCP/IP [2], EthSM [3], CDD, V2x modules) may access the underlying bus system in a uniform manner.

The Ethernet Interface does not directly access the Ethernet hardware (Ethernet Communication Controller and Ethernet Transceiver) but by means of one or more hardware-specific driver modules.

[SWS_EthIf_00111] In order to access the Ethernet controller(s), the Ethernet Interface shall use one or multiple Ethernet Driver modules, which abstract the specific features and interfaces of the respective Ethernet controller(s).

[SWS_EthIf_00123] In order to access the Ethernet transceiver(s), the Ethernet Interface shall use one or multiple Ethernet Transceiver Driver modules, which abstract the specific features and interfaces of the respective Ethernet transceiver(s).

[SWS_EthIf_00228] [In order to access the Ethernet switch(es), the Ethernet Interface shall use one or multiple Ethernet Switch Driver modules, which abstract the specific features and interfaces of the respective Ethernet switch(es).]

[SWS_EthIf_00112] [Therefore, the Ethernet Interface executable code (however, not the configuration used during runtime) shall be completely independent of the Ethernet Communication Controller(s).

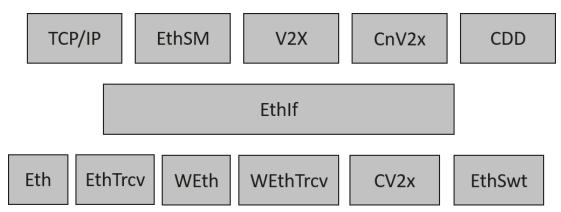

Figure 1.1: Ethernet stack module overview

Note: The Ethernet Interface is specified in a way that allows for object code delivery of the code module, following the "one-fits-all" principle, i.e. the entire configuration of the Ethernet Interface can be carried out without modifying any source code. Thus, the configuration of the Ethernet Interface can be carried out largely without detailed knowledge of the underlying hardware.

2 Acronyms and Abbreviations

The glossary below includes acronyms and abbreviations relevant to the Ethernet Interface module that are not included in the [4, AUTOSAR glossary].

Abbreviation / Acronym:	Description:	
CBR	Channel Busy Ratio	
CIT	Channel Idle Time	
CV2x	Cellular Vehicle to X driver	
Eth	Ethernet Controller Driver (AUTOSAR BSW module)	
Ethlf	Ethernet Interface (AUTOSAR BSW module)	
EthSM	Ethernet State Manager (AUTOSAR BSW module)	
EthTrcv	Ethernet Transceiver Driver (AUTOSAR BSW module)	
IP	Internet Protocol	
MCG	Module Configuration Generator	
MII	Media Independent Interface (standardized Interface provided by Ethernet controllers to access Ethernet transceivers)	
RSSI	Received Signal Strength Indicator	
TCP	Transmission Control Protocol	
TCP/IP Stack	Ethernet communication stack	
VLAN	Virtual Local Area Network	
WEth	Wireless Ethernet Driver	
WEthTrcv	Wireless Ethernet Transceiver Driver	
OA TC10	Open Alliance TC10 Specification [5]

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [6, SWS BSW General], which is also valid for Ethernet Interface.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Ethernet Interface.

4 Constraints and assumptions

4.1 Limitations

The Ethernet Interface is conceptually able to access one or more Ethernet Driver and one or more Ethernet Transceiver Driver.

It is not possible to transmit data which exceeds the available buffer size of the used Ethernet controller. Longer data has to be transmitted using the Internet Protocol (IP) or Transmission Control Protocol (TCP).

4.2 Applicability to car domains

The Ethernet BSW stack is intended to be used wherever high data rates are required but no hard real-time is required. Of course, it can also be used for less-demanding use cases, i.e. for low data rates.

5 Dependencies to other modules

This chapter lists the modules interacting with the Ethernet Interface module.

Modules that use Ethernet Interface module:

- Ethernet Communication Stack (TCP/IP Stack [2])
- Ethernet State Manager (EthSM) [3]
- V2xGn [7]
- CnV2xNet [8]
- CnV2xM [9]

Dependencies to other Modules:

- The Ethernet Interface module doesn't take care of configuring Ethernet Driver [10] but requires its preceding initialization and configuration.
- The Ethernet Interface module doesn't take care of configuring Ethernet Transceiver Driver [11] but requires its preceding initialization and configuration.

6 Requirements Tracing

The following tables reference the requirements specified in [12, SRS BSWGeneral] and [13, SRS Ethernet] and links to the fulfillment of these. Please note that if column "Satisfied by" is empty for a specific requirement this means that this requirement is not fulfilled by this document.

Requirement	Description	Satisfied by
[FO_RS_Fw_00011]	Hardware-Accelerated Filtering Support	[SWS_EthIf_91023] [SWS_EthIf_91024] [SWS_EthIf_91025] [SWS_EthIf_91027]

Table 6.1: Requirements Tracing

7 Functional specification

7.1 Ethernet BSW stack

As part of the AUTOSAR Layered Software Architecture [1], the Ethernet BSW modules also form a layered software stack. Figure 7.1 depicts the basic structure of this Ethernet BSW stack. The Ethernet Interface module accesses several Ethernet controllers using the Ethernet Driver layer, which can be made up of several Ethernet Drivers modules.

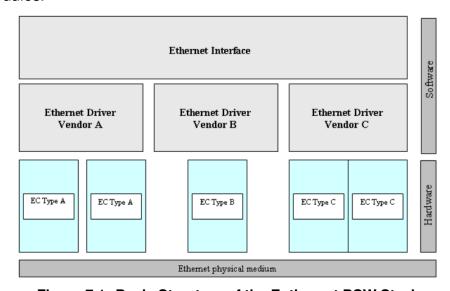

Figure 7.1: Basic Structure of the Enthernet BSW Stack

7.1.1 Indexing scheme for Ethernet controller

In case CAN XL is used as physical medium, the configuration will contain an EthIfEth-CanXLCtrlRef instead of an EthIfEthCtrlRef and an EthIfCanXLTrcvRef instead of an EthIfEthTrcvRef. In this case, APIs denoted as <EthDrv>_Xxx will be called as CanXL_Xxx, otherwise as Eth_Xxx, and likewise APIs denoted as <EthTrcv>_Yyy will be called as CanXLTrcv_Yyy, otherwise EthTrcv_Yyy.

Users of the Ethernet Interface identify Ethernet controller resources using an indexing scheme as depicted in Figure 7.2.

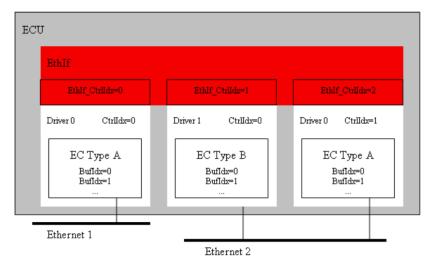

Figure 7.2: Ethernet Interface controller indexing scheme

[SWS_EthIf_00003] [The Ethernet Interface is using an index (EthIfCtrIldx) to abstract the access to VLANs from the underlying communication system compromised of Ethernet Controller and Ethernet Transceiver.

Therefore the Ethernet Interface shall implement a mapping from Ethernet Interface controllers (EthIfCtrIldx) to respective hardware ressource controllers (EthCtrIld + EthTrcvId).

7.1.2 Indexing scheme for Ethernet switches

Since the EthIf is not concerned with the individual EthSwtPorts which belong to the individual EthSwtes there is no indexing scheme for EthSwtPorts required in the EthIf. Any BSW module which interacts with EthSwtPorts can directly refer to the ECU configuration of the EthSwtPort for the indexing.

[SWS_EthIf_00224] [The EthIf shall dispatch all accesses by the EthIfSwitchIdx index to the respective EthSwt driver module with the EthSwtIdx value]

7.1.3 Initialization

The EthIf module is initialized via EthIf_Init, and de-initialized via EthIf_-DeInit. Except for EthIf_GetVersionInfo, EthIf_Init and any EthIf scheduled function (e.g. EthIf_MainFunctionTx), the API functions of the EthIf module may only be called after the module has been properly initialized.

[SWS_EthIf_00651] DET error reporting of ETHIF_E_UNINIT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386, SRS_BSW_00450

[If development error reporting is enabled via EthIfDevErrorDetect, the EthIf module shall call Det_ReportError with the error code ETHIF_E_UNINIT when any API other than EthIf_Init, EthIf_GetVersionInfo or any EthIf scheduled function (e.g. EthIf_MainFunctionTx) is called in uninitialized state.

7.1.4 Ethernet Interface main function

[SWS_EthIf_00004] [The Ethernet Interface shall implement main functions to be used for frame transmission confirmation and frame reception in polling mode with a calling period configurable at system configuration time.]

7.1.5 Requirements

This chapter lists requirements that shall be fulfilled by Ethernet Interface module implementations.

The Ethernet Interface module environment comprises all modules which are calling interfaces of the Ethernet Interface module.

[SWS_EthIf_00005] [The Ethernet Interface module shall support pre-compile time, link time and post-build time configuration.]

[SWS_EthIf_00006] [The header file EthIf.h shall include a software and specification version number.]

[SWS_EthIf_00007] The Ethernet Interface module shall perform a consistency check between code files and header files based on pre-process-checking the version numbers of related code files and header files.

[SWS_EthIf_00008] [In case development error detection is enabled for the Ethernet Interface module: The Ethernet Interface module shall check API parameters for validity and report detected errors to the DET.|

DET API functions are specified in [14, Specification of Default Error Tracer].

[SWS_EthIf_00010] The Ethernet Interface module shall implement the API functions specified by the Ethernet Interface SWS as real C-code functions and shall not implement the API as macros for object code deliveries.

[SWS_EthIf_00011] [None of the Ethernet Interface module header files shall define global variables.]

7.1.6 Configuration description

[SWS_EthIf_00012] The Ethernet Interface module shall provide an XML file that contains the data, which is required for the SW identification (it shall contain the vendor identification, module ID and software version information), configuration and integration process. This file should describe vendor specific configuration parameters as well as it should contain recommended configuration parameter values.

[SWS_EthIf_00117] The MCG shall read the ECU configuration description of the Ethernet Driver and the Ethernet Interface module(s). While cluster related configuration parameters are contained in the Ethernet Interface module configuration description, Ethernet Driver related configuration data is contained in the Ethernet Driver module configuration description. The Ethernet Interface module specific configuration tool shall read both ECU module descriptions to derive the configuration data for all Ethernet Drivers mapped to the Ethernet Interface module.

[SWS_EthIf_00118] [The MCG shall ensure the consistency of the generated configuration data. |

[SWS_EthIf_00013] [The configuration of the Ethernet Interface module shall be configured at ECU configuration time. None of the communication parameters shall be configured at runtime.]

[SWS_EthIf_00014] [The start address of post-build time configuration data shall be passed during module initialization.]

An assignment of those configuration classes to configuration parameters can be found in chapter 10.

A detailed description of all Ethernet Interface related configuration parameters can be found in chapter 10 of this document. Additionally, the configuration description of the Ethernet Driver (see chapter 10 of [10, Specification of Ethernet Driver]) shall be evaluated for Ethernet Interface module configuration.

7.1.7 VLAN support

[SWS_EthIf_00128] [The Ethernet Interface shall support Virtual Local Area Networks (VLAN). |

[SWS_EthIf_00129] [The Ethernet Interface shall encapsulate Virtual Local Area Networks (VLAN) into virtual controllers (Ethernet Interface controller) representing a dedicated VLAN.

All BSW modules above the Ethernet Interface shall interact based on those virtual controllers.

The Ethernet Driver and Transceiver deal only with real controllers and are not aware of the existence of virtual controllers.

Caveat: the virtual controller represents the untagged VLAN if no VLAN ID is set.

[SWS_EthIf_00130] [The Ethernet Interface shall use the buffers provided by the Ethernet Driver for VLAN support. If Can XL is used the Ethernet Interface shall use the buffers provided by the Can XL Driver. |

7.1.8 Wake up support

The Ethernet Interface supports wake up depending on the parameter EthIfWakeUp-Support.

Note: Enabling wake-up support in Ethlf makes only sense if the underlying EthTrcv supports also wake up.

7.1.9 Ethernet Switch Management support

Ethernet switch management enables the possibility to control an Ethernet frame regarding an Ethernet switch port specific ingress and egress handling as well as providing a Ethernet switch port specific timestamp. This functionality is essential for other BSW modules, in particular for EthTSyn, which requires Port specific information associated to a time synchronization [15] or path-delay measurement frame.

For an introduction of the basic HW architecture and interaction, please refer to [10, Specification of Ethernet Driver].

For more details regarding functional sequences, please refer to [16, Specification of Wireless Ethernet Driver].

Note: Ethernet switch management API's supporting the <Upper Layer> to gather / modify Ethernet switch port specific communication attributes.

7.1.10 Handling of maintained Ethernet hardware

The Ethernet Interface handle the maintained Ethernet hardware due to its configuration:

- EthlfPhysController (representing physical Ethernet controller)
- EthlfController (representing virtual Ethernet controller to support VLANs)
- EthIfTransceiver (representing PHYs)
- EthIfSwitch (representation of an Ethernet switch)
- EthIfSwitchPortGroups (representing groups of EthSwtPorts)

At least one EthIfPhysController should be present in the configuration to interact with the Ethernet driver. EthIfController represent the connection between the physical Ethernet controller and used Ethernet hardware to communicate on and Ethernet network. This could be either an EthIfTransceiver or an EthIfSwitch or an EthIfSwitchPortGroup. If an upper layer wants to control the communication on a particular Ethernet network, it calls the corresponding EthIfController via EthIf_SetControllerMode. The Ethernet Interface handle a communication request, such that it takes care to forward the request to the corresponding Ethernet hardware:

- EthIfTransceiver
- EthlfSwitch
- EthIfSwitchPortGroup with reference of type "control"

For EthIfController with reference of type "link-information" to an EthIfSwitchPortGroup, the Ethernet Interface supervise the link state of all EthSwtPorts within a EthIfSwitchPortGroup and signal the accumulated link state to the corresponding upper layer (EthSM [3]). Those EthIfSwitchPortGroups are controlled via a call of EthIf_SwitchPortGroupRequestMode. This is used if EthIfSwitchPortGroups are controlled according to partial network requests. Partial network requests are forwarded to BswM and a particular rule in the BswM lead to an action to control the corresponding EthIfSwitchPortGroup. Thus the upper layer of the Ethernet Interface to control the communication is EthSM and the BswM, if EthIfSwitchPortGroup switching is used. Independent if an EthIfController or an EthIfSwitchPortGroup are addressed for a communication request, the upper layer request the Ethernet Connection to be ACTIVE (ETH_MODE_ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST) or DOWN (ETH_MODE_DOWN). The Ethernet Inteface requests the corresponding lower layer to switch on the corresponding Ethernet Hardware for a DOWN-request.

7.1.10.1 EthlfSwitchPortGroup

The Ethernet Interface supports the grouping of Ethernet switch ports (EthIfSwitch-PortGroup). The request (either ACTIVE or DOWN) will be handled and rated by the

Ethernet Interface. The Ethernet Interface has to decide either to put the EthifSwitch-PotGroup to DOWN or ACTIVE state. ACTIVE-request for EthIfSwitchPortGroup will always overrule DOWN-request for EthIfSwitchPortGroups. If a DOWN-request for an EthIfSwitchPortGroup is ready for execution, the EthIf will check the EthSwtPorts which are referenced by the EthIfSwitchPortGroup and decide if the EthSwtPort can be set to DOWN state. If this is valid, the EthSwtPort is set to DOWN state after the configured switch off delay timer has expired.

Note: Further requirements for switching of EthIfSwitchPortGroups are available in chapter 7.1.10.2 and 8.4.5.4.

7.1.10.1.1 Link state accumulation of EthlfSwitchPortGroup

The Ethernet Interface need to know the actual link state of the EthIfSwitchPortGroups. The link state for an EthIfSwitchPortGroup is computed over all link states of the EthSwtPorts which are referenced by the EthIfSwitchPortGroup. The execution of the computation is called "link state accumulation" and the result is called "accumulated link state". The accumulated link state of the EthIfSwitchPortGroup is the actual state of the EthIfSwitchPortGroup. The actual state of the EthIfSwitchPortGroup. The actual state of EthIfSwitchPortGroups referenced by an EthIfController is reported to the EthSM by calling EthSM_TrcvLinkStateChg. The actual state of EthIfSwitchPortGroups which are not referenced by any EthIfController is reported to the BswM by calling BswM_EthIf_PortGroupLinkStateChg.

[SWS_EthIf_00259] [The link state for an EthIfSwitchPortGroup is computed over all link states of the EthSwtPorts which are referenced by the EthIfSwitchPortGroup. Its status is ETHTRCV_LINK_STATE_DOWN (link down) if one of the following conditions is met:

- Referenced EthSwtPort with the role "host port" or the role "up link port" has link down state
- All referenced EthSwtPort without a role have link down state

Otherwise its accumulated link state is ETHTRCV_LINK_STATE_ACTIVE (link up).

[SWS_EthIf_00260] [If the EthIfCtrl references a EthIfSwitch but no port group is configured, the EthIf shall indicate the link state of the host port to the EthSM by calling EthSM_TrcvLinkStateChg for the EthIfController when the link state changes.]

[SWS_EthIf_00261] [In case a EthIfSwitchPortGroup is not connected to any EthIf-Controller, the EthIf shall indicate the accumulated link state of the EthIfSwitchPort-Group to the BswM by calling $BswM_EthIf_PortGroupLinkStateChg$ for the EthIfSwitchPortGroup when the link state changes (refer to [SWS_EthIf_00259] for link state accumulation).

Note: Reporting of <code>BswM_EthIf_PortGroupLinkStateChg</code> is intentionally reporting the accumulated link state of the port group independent of any EthIf controller mode.

[SWS_EthIf_00262] [In case a EthIfSwitchPortGroup is connected to a EthIfController, the EthIf shall indicate the accumulated link state of the EthIfSwitchPortGroup to the EthSM by calling EthSM_TrcvLinkStateChg for the EthIfController when the link state changes (refer to [SWS_EthIf_00259] for link state accumulation).

7.1.10.2 Switching of EthlfController and the corresponding Ethernet hardware

Switching of an EthIfController is triggered via a call of EthIf_SetControllerMode. Switching of an EthIfController implicitly include the switching of the corresponding Ethernet hardware (PHY, Ethernet switch, Ethernet switch port). The Ethernet Interface interact with the lower layer via asynchronous callback notification (e.g. EthIf_Trcv-ModeIndication). The chapter describe the interaction of the APIs used to switch the EthIfController and the corresponding Ethernet hardware.

Note:

- 1. A call of the EthIf_SetControllerMode causes an asynchronous indication by calling EthIf_CtrlModeIndication, if the mode of the referenced EthIf-PhysController has changed.
- 2. The requirements assume that Ethernet Controller (EthlfPhysControllerldx) and the referenced Ethernet hardware (e.g. PHY, Ethernet Switch) are controlled independent from each other. For example, if ETH_MODE_ACTIVE or ETH_MODE_-ACTIVE_WITH_WAKEUP_REQUEST has been requested and Ethernet Controller Driver of the affected Ethernet Controller (EthlfPhysControllerldx) has NOT indicated ETH_MODE_ACTIVE yet, then those requests can be forwarded directly to the corresponding lower layers of the referenced Ethernet hardware. An implementation has to consider the following points:
 - ETH_MODE_ACTIVE and ETH_MODE_DOWN are activating and de-activiating the communication capability of an Ethernet Controller, but not the control capability of connected Ethernet hardware (e.g. MDIO).
 - The implementation has to ensure, that the control capabilities via an Ethernet controller are always available, if needed by the driver modules (e.g. Ethernet switch driver)
- 3. EthIf has to ensure that a request with ETH_MODE_ACTIVE_WITH_WAKEUP_-REQUEST is not overwritten by another call of EthIf_SetControllerMode with ETH_MODE_ACTIVE, if the request is deferred due to the EthIfPhysController has not already indicated ETH_MODE_ACTIVE.

[SWS_EthIf_00035] [The function EthIf_SetControllerMode shall forward the call to function <EthDrv>_SetControllerMode of the corresponding Ethernet Controller Driver (EthIfPhysControllerIdx) with ETH_MODE_ACTIVE, if mode ETH_MODE_-ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST has been requested and the corresponding Ethernet Controller Driver (EthIfPhysControllerIdx) has NOT already indicated ETH_MODE_ACTIVE.

[SWS Ethlf 00266]

Upstream requirements: SRS_Eth_00157

[If EthIf_SetControllerMode has been called for an EthIfController with ETH_-MODE_ACTIVE and this EthIfController has a reference to an EthIfTransceiver, then EthIf shall forward the call to the following functions in the given order, if the current mode of the EthIfTransceiver is ETH_MODE_DOWN:

- 1. <EthTrcv>_SetTransceiverMode with ETH_MODE_ACTIVE
- 2. <EthTrcv>_TransceiverLinkStateRequest with ETHTRCV_LINK_- STATE_ACTIVE

1

[SWS_EthIf_00478]

Upstream requirements: SRS_Eth_00157

[If EthIf_SetControllerMode has been called for an EthIfController with ETH_-MODE_ACTIVE and this EthIfController has a reference to an EthIfSwitch, then EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the referenced switch if mode ETH_MODE_ACTIVE has been requested and the current EthSwtPort mode is ETH_MODE_DOWN:

- 1. EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE
- 2. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE

[SWS Ethlf 00264]

Upstream requirements: SRS_Eth_00157

[If EthIf_SetControllerMode has been called for an EthIfController with ETH_-MODE_ACTIVE and this EthIfController has a reference to an EthIfSwitchPortGroup of type "control", then EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the respective EthIfSwitchPortGroup if the mode ETH_-MODE_ACTIVE has been requested for the first EthIfSwitchPortGroup referencing the EthSwtPort and the current EthSwtPort mode is ETH_MODE_DOWN:

- 1. EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE
- 2. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE

Note: EthIfController that reference EthIfSwitfhPortGroups and the reference is of type "link-information" (see [ECUC_EthIf_00048]), then those EthIfSwitchPortGroups could be switched according to PNC states via a dedicatd rules in the BswM. The BswM rule can be configured via the BswMEthIfSwitchPortGroupRequestMode action. The BswM call the API EthIf_SwitchPortGroupRequestMode to switch the corresponding EthIfSwitchPortGroup.

[SWS_EthIf_00272] [If EthIf_SwitchPortGroupRequestMode has been called with ETH_MODE_ACTIVE, EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the respective EthIfSwitchPortGroup:

- 1. Call EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE, if the current mode is ETH_MODE_DOWN.
- 2. Call EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE, if the current link state is ETHTRCV_LINK_STATE_DOWN

[SWS Ethlf 00479]

Upstream requirements: SRS Eth 00157

[Everytime EthIf_SetControllerMode has been called for an EthIfController with ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST and this EthIfController has a reference to an EthIfTransceiver, then EthIf shall forward the call to the following functions in the given order, independent of the current mode:

- <EthTrcv>_SetTransceiverMode with ETH_MODE_ACTIVE_WITH_-WAKEUP_REQUEST
- 2. <EthTrcv>_TransceiverLinkStateRequest with ETHTRCV_LINK_-STATE_ACTIVE, only if the current state is ETHTRCV_LINK_STATE_DOWN

1

[SWS Ethlf 00480]

Upstream requirements: SRS Eth 00157

[Everytime EthIf_SetControllerMode has been called for an EthIfController with ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST and this EthIfController has a reference to an EthIfSwitch, then EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the respective EthIfSwitchPortGroup, independ of the current mode:

1. EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE_WITH_WAKEUP_RE-QUEST

2. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE, if the current mode is ETHTRCV_LINK_STATE_DOWN

[SWS Ethlf 00481]

Upstream requirements: SRS_Eth_00157

[Everytime EthIf_SetControllerMode has been called for an EthIfController with ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST and this EthIfController has a reference to an EthIfSwitchPortGroup of type "control", then EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the respective EthIf-SwitchPortGroup, independent of the current mode:

- 1. EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST
- 2. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE, if the current mode is ETHTRCV_LINK_STATE_DOWN

[SWS Ethlf 00482]

Upstream requirements: SRS_Eth_00157

[Everytime EthIf_SwitchPortGroupRequestMode has been called with ETH_-MODE_ACTIVE_WITH_WAKEUP_REQUEST, EthIf shall forward the call for all EthSwt-Ports of the respective EthIfSwitchPortGroup to the following functions in the given order independent of the current EthSwtPort mode:

- 1. EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST
- 2. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE, only if current link state is ETHTRCV_LINK_STATE_DOWN

Rational for [SWS_Ethlf_00479], [SWS_Ethlf_00480], [SWS_Ethlf_00481] and [SWS_Ethlf_00482]: A wake-up request has always to be forwarded to the lower layer independent of the current mode to ensure that a wake-up is triggered on the network. This could be used for e.g. communication channels where the Ethernet hardware is compliant to OA TC10 (see [5, OPEN Sleep/Wake-up Specification for Automotive Ethernet])

[SWS Ethlf 00483]

Upstream requirements: SRS_Eth_00157

[If EthIf_SwitchPortGroupRequestMode is called with ETH_MODE_ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST, then a running timer to delay the switch off all ports of the respective EthIfSwitchPortGroup (PortGroupIdx) shall be canceled.

[SWS_EthIf_00263] [EthIf shall call the function <EthDrv>_SetControllerMode of the corresponding Ethernet Controller Driver (EthIfPhysControllerIdx) with ETH_- MODE_DOWN, if EthIf_SetControllerMode has been called with mode ETH_- MODE_DOWN for all Ethernet Interface Controller referencing the Ethernet Controller.

Note:

• In case of VLAN support, EthIf has to store internally the state of each EthIfController in order to filter out the requests from upper layers and disable the callouts to upper layers when the EthIfController is disabled.

[SWS_EthIf_00484] [If EthIf_SetControllerMode is called for an EthIfController with ETH_MODE_DOWN and this EthIfController has a reference to an EthIfTransceiver, then EthIf shall forward the call to the following functions in the given order, if the current mode of the EthIfTransceiver is ETH_MODE_ACTIVE:

- 1. <EthTrcv>_SetTransceiverMode with ETH_MODE_DOWN
- 2. <EthTrcv>_TransceiverLinkStateRequest with ETHTRCV_LINK_- STATE_DOWN

[SWS_EthIf_00485] [If EthIf_SetControllerMode is called for an EthIfController with ETH_MODE_DOWN and this EthIfController has a reference to an EthIfSwitch, then EthIf shall forward the call to the following functions in the given order for all EthSwt-Ports, where the current mode of the EthSwtPort is ETH_MODE_ACTIVE:

- 1. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_DOWN
- 2. EthSwt_SetSwitchPortMode with ETH_MODE_DOWN

[SWS_EthIf_00265] [If EthIf_SetControllerMode is called for an EthIfController with ETH_MODE_DOWN and this EthIfController has a reference to an EthIfSwitchPort-Group of type "control", then EthIf shall forward the call to the following functions in the given order for all EthSwtPorts of the respective EthIf_SwitchPortGroup, but only for those EthSwtPorts where all referencing EthIfSwitchPortGroups has been requested with ETH_MODE_DOWN and the current mode of the EthSwtPort is ETH_MODE_ACTIVE:

- 1. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_DOWN
- 2. EthSwt_SetSwitchPortMode with ETH_MODE_DOWN

Rationale: In case the respective EthIfController has no reference to an EthIf_SwitchPortGroup or the reference is of type "link information" the requested modes are not forwarded. This EthIf_SwitchPortGroups will be requested by an upper layer (e.g. BswM) with API EthIf_SwitchPortGroupRequestMode.

[SWS_EthIf_00661] Setting of TrcvLinkState in configured state change function when the referenced controller is not referencing a transceiver, nor a switch or switch port group [If EthIf_CtrlModeIndication is called and the controller (either Ethernet of CanXL) given by CtrlIdx is referenced by a EthIfController which neither has a EthIfEthTrcvRef or EthIfCanXLTrcvRef nor a reference to a EthIfSwitch or EthIfSwitchPortGroup configured, then for this EthIfController which has a state change function configured (see EthIfTrcvLinkStateChgFunction) the User_TrcvLinkStateChg shall be called and TrcvLinkState shall be used according to the following mode / transceiver link state mapping:

- 1. if ETH_MODE_ACTIVE has been indicated, then ETHTRCV_LINK_STATE_ACTIVE shall be propagated as TrcvLinkState
- 2. if ETH_MODE_DOWN has been indicated, then ETHTRCV_LINK_STATE_DOWN shall be propagated as TrcvLinkState

[SWS_EthIf_00649] Controller mode request ETH_MODE_ACTIVE or ETH_MODE_-ACTIVE_WITH_WAKEUP_REQUEST for an EthIf controller which is not referencing a transceiver, switch or switch port group

Upstream requirements: SRS Eth 00157

[If EthIf_SetControllerMode has been called for an EthIfController with ETH_MODE_ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST and this EthIfController has no reference to an EthIfTransceiver or EthIfSwitch or EthIfSwitchPortGroup, then EthIf shall call EthSM_TrcvLinkStateChg and all configured <User>_TrcvLinkStateChg functions with this EthIfController index and link state set to ETHTRCV_LINK_STATE_ACTIVE.

[SWS_EthIf_00650] Controller mode request ETH_MODE_DOWN for an EthIf controller which is not referencing a transceiver, switch or switch port group

Upstream requirements: SRS Eth 00157

[If EthIf_SetControllerMode has been called for an EthIfController with ETH_MODE_DOWN and this EthIfController has no reference to an EthIfTransceiver or EthIfSwitch or EthIfSwitchPortGroup, then EthIf shall

call EthSM_TrcvLinkStateChg and all configured <User>_TrcvLinkStateChg functions with this EthIfController index and link state set to ETHTRCV_LINK_-STATE_DOWN.

7.1.10.3 Additional Ethernet switch port handling

The following additional Ethernet switch port handling has been introduced to support a use case for a passive wake up of an ECU where all Ethernet switch ports of the corresponding Ethernet switches shall be switched on immediately. E.g. after a wakeup occurred. Afterwards it is checked if a PN request is received via NM frames within EthlfPortStartupActiveTime. If a PN request is received, then the corresponding EthlfSwitchPortGroups are requested with ETH_MODE_ACTIVE and corresponding EthlfSwitchPortGroups are not requested (due to no according PN request received within EthlfPortStartupActiveTime) are switched off.

[SWS_EthIf_00275] [If EthIf_StartAllPorts has been called, then EthIf shall forward the call to the following functions in the given order to all EthSwtPorts of all configured EthIfSwitches:

- 1. Call EthSwt_SetSwitchPortMode with ETH_MODE_ACTIVE, if the current mode is ETH_MODE_DOWN.
- 2. Call EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_ACTIVE, if the current link state is ETHTRCV LINK STATE DOWN

and start a timer with EthIfPortStartupActiveTime for all these ports.

[SWS_EthIf_00276] [After EthIf_StartAllPorts has been called, EthIf shall deactivate all those ports activated due to EthIf_StartAllPorts (see [SWS_EthIf_00275]) which are not requested with ETH_MODE_ACTIVE within EthIf-PortStartupActiveTime by calling the following functions in the given order:

- 1. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_DOWN
- $\textbf{2.} \ \texttt{EthSwt_SetSwitchPortMode} \ \textbf{with} \ \texttt{ETH_MODE_DOWN}$

Rational: Delaying with EthIfPortStartTime is needed to ensure that NM messages with PNC information are received and the requested PNCs are activated.

Note:

1. EthIf_StartAllPorts could be called in context of BswM_EcuM_Current-Wakeup. After a wakeup occurred on the wakeup line, all EthIfSwitchPortgroups shall be activated to enable communication stack to receive NM messages (PNC)

information). With this it is possible to start the EthIfSwitchPortGroups without starting a PNC.

2. Further requirements for switching of EthSwtPorts, if an EthIfController referencing an EthIfSwitch are available in chapter 7.1.10.2.

7.1.11 Communication control

The Ethernet Interface has to provide a kind of communication control to support the so-called "silent communication". Silent communication is used for mode management to support a communication mode where the transmission path for a particular EthIfController is disabled, while the reception path is still enabled (see COMM_SILENT_COMMUNICATION). Disabling of the transmission path is exclusively introduced in the Ethernet Interface and has no impact on the used Ethernet hardware.

[SWS Ethlf 00504]

Upstream requirements: SRS_Eth_00157

[If EthIf_SetControllerMode is called for an EthIfController with ETH_MODE_-ACTIVE_TX_OFFLINE and the latest accepted controller mode for this EthIfController is ETH_MODE_ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST, then ETH_-MODE_ACTIVE_TX_OFFLINE shall be stored as current controller mode. Otherwise the requested controller mode shall be rejected and function shall return with E_NOT_-OK.]

Note: The transmission related API (see [SWS_EthIf_00075]) will only forward transmission requests, if the stored communication mode is ETH_MODE_ACTIVE or ETH_-MODE_ACTIVE_WITH_WAKEUP_REQUEST.

7.1.12 Communication

The Ethernet Interface support a PDU-based communication approach to transfer data from the lower layer to the upper layer and vice versa. The EthIf module interchange PDUs with the upper layers (e.g. [17, SWS IEEE1722Tp module]) via the [18, SWS L-SDU router module]. This approach interchanges frame-specific information via specific PDUs. The APIs carries PduId and PduInfoPtr. PduId identifies the according PDU. PduInfoPtr contains SduDataPtr, which addresses the location of buffer where data is provided and SduDataLength which denotes the length of the provided data. Optionally, meta data can be used to transfer additional frame specific information (see 7.1.12.5 "Meta data handling")

PDUs are configured in PDU pools. Multiple PDU pools could be configured per EthIfFrameType. The PDU pools are organized in EthIfFrameRx-Pools and EthIfFrameTxPools. A EthIfFrameRxPool could contain multiple

EthIfFrameTxPdus and a EthIfFrameTxPool multiple EthIfFrameTxPdus. A PDU pool could reference a specific EthIfController, i.e. the PDU pool is utilized for communication via this specific EthIfController. Such PDU pools are called "fixed" PDU pools. Fixed PDU pools are used per EthIfFrameType and EthIfController. PDU pools without an configured reference to an specific EthIfController are called "floating" PDU pools. Such PDU pools are configured per EthIfFrameType and shared across configured EthIfController. PDUs of PDU pools should have the same PDU properties configured, since they are used for the same purpose.

[SWS_EthIf_CONSTR_00010] Same configuration of PDUs that belong to the same PDU pool for KeepLocalPduBuffer

Status: DRAFT

[All EthIfFrameRxPdus that belong to the same EthIfFrameRxPool and all EthIfFrameTxPdus that belong to same EthIfFrameTxPool shall have the same value for KeepLocalPduBuffer configured (either TRUE or FALSE)]

Note: Please refer to (see 7.1.12.5 "Meta data handling") for configuration of Meta-DataItems

The Ethlf need to translate between PDU-based communication and frame-based communication for the interaction with the Eth driver and vice versa, since the Eth driver is not PDU-aware:

- The Eth driver provide frame specific API parameter via EthIf_RxIndication and EthIf translate the frame specific parameter to a PDU-based reception indication.
- The upper layer modules (e.g. IEEE1722Tp module) request the EthIf to transmit PDUs with frame specific information via meta data (e.g. VLAN-priority), and the EthIf translate the PDU-based transmission request to an frame-based transmission request towards the Eth driver:
 - direct data provision: the upper layer request EthIf to forward the provided data directly to Eth driver
 - indirect data provision: the upper layer request EthIf to call the upper layers TriggerTransmit function to retrieve data, and EthIf trigger transmission afterwards

7.1.12.1 Reception

If EthIf is indicated via a call of EthIf_RxIndication to receive an Ethernet frame, then EthIf need to check if the frame type of the received Ethernet frame matches to a configured EthIfFrameType. If a match is identified and the referencing

EthIfFrameConfig of the matching EthIfFrameType have an EthIfFrameRx-Pool configured, then EthIf has to search for an available EthIfFrameRxPdu. If a EthIfFrameRxPdu is available, then this EthIfFrameRxPdu is used to perform the receive processing.

The reception is indicated and forwarded to the destination upper layer. The destination upper layer receive an indication and perform a reception processing. Optionally, if the reception processing is finalized, the upper layer could explicitly indicate to release the EthIfFrameRxPdu with a call of EthIf ReleaseRxBuffer. This behaviour is configurable and used to support hardware supported data transfer (e.g. via DMA) from the lower layer buffers to the upper layers destination receive buffer. As long as the asynchronous data transfer is not finalized, the EthCtrlConfigIngressQueue element is locked, and consequently also the used EthIfFrameRxPdu. For further receptions that matches the same EthIfFrameType another EthIfFrameRxPdu of the corresponding EthIfFrameRxPool has to be used. A call of EthIf ReleaseRxBuffer is only expected by the Ethlf, if a global PDU is configured with KeepLocalPduBuffer set to TRUE. KeepLocalPduBuffer set to TRUE indicate, that the destination upper layer may trigger a hardware supported data transfer. Therefore the EthCtrlConfigIngressQueue element need to be locked until the upper layer indicate to release EthCtrlConfigIngressQueue element. If a global PDU is configured with KeepLocalPduBuffer set to FALSE, the Ethlf module call directly Eth_ReleaseRxBuffer after the RxIndication function call returns.

[SWS_EthIf_00663] Reception handling with fixed EthIfFrameRxPools

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_RxIndication is called and the following conditions are true:

- the given FrameType match to EthIfFrameType of a configured EthIfFrameConfig
- the matching EthIfFrameConfig has an EthIfFrameRxPool configured, where at least one EthIfFrameRxPdu is in state PDU_AVAILABLE
- the VLAN-ID of the received Ethernet frame match to the EthIfVlanId of the EthIfController which is referenced via EthIfFrameRxControllerRef

then the Ethlf shall perform the following actions:

- set the RxPduId to the PDU-ID of the PDU, which is referenced by the EthIfFrameRxPdu
- transfer the given DataPtr and DataLen to the PduInfoPtr of the used EthIfFrameRxPdu
- if MetaDataItem TIMETUPLE_TYPE_PTR is configured at the used PDU, which is referenced by the EthIfFrameRxPdu:

- produce MetaDataItem TIMETUPLE_TYPE_PTR and transfer the given IngressTimeTuplePtr to the produced MetaDataItem TIMETUPLE_-TYPE_PTR
- add a pointer of the produced MetaDataItem to the PduInfoPtr of the used EthIfFrameRxPdu
- set the EthIfFrameRxPdu to state PDU_IN_USE
- store a mapping of the given RxHandleId with the PDU-ID of the used EthIfFrameRxPdu
- call LSduR_EthIfRxIndication with created PduInfoPtr and RxPduId of the used EthIfFrameRxPdu

[SWS_EthIf_00664] Reception handling with floating EthIfFrameRxPools

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_RxIndication is called and the following conditions are true:

- the given FrameType match to EthIfFrameType of a configured EthIfFrameConfig
- the matching EthIfFrameConfig has an EthIfFrameRxPool configured, where at least one EthIfFrameRxPdu is in state PDU_AVAILABLE
- the EthIfFrameRxPool is not assigned to an specific EthIfController, i.e. EthIfFrameRxControllerRef is not configured
- the VLAN-ID of the received Ethernet frame match to the EthIfVlanId of an configured EthIfController

then the Ethlf shall perform the following actions:

- set the RxPduId to the PDU-ID of the PDU, which is referenced by the EthIfFrameRxPdu
- transfer the given DataPtr and DataLen to the PduInfoPtr of the used EthIfFrameRxPdu
- if MetaDataItem TIMETUPLE_TYPE_PTR is configured at the used PDU, which is referenced by the EthIfFrameRxPdu:
 - produce MetaDataItem TIMETUPLE_TYPE_PTR and transfer the given IngressTimeTuplePtr to the produced MetaDataItem TIMETUPLE_-TYPE PTR
 - add a pointer of the produced MetaDataItem to the PduInfoPtr of the used EthIfFrameRxPdu
- set the EthIfFrameRxPdu to state PDU_IN_USE

- store a mapping of the given RxHandleId with the PDU-ID of the used EthIfFrameRxPdu
- call LSduR_EthIfRxIndication with created PduInfoPtr and RxPduId of the used EthIfFrameRxPdu

[SWS_EthIf_00665] Abort of reception indication process

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_RxIndication is called, then the EthIf shall first try to find a matching EthIfFrameRxPdu from an fixed EthIfFrameRxPool and second from an floating EthIfFrameRxPool. If no matching EthIfFrameRxPdu is available, then the processing of the reception indication shall be aborted.

[SWS_EthIf_00638] Error handling for aborted reception indication process

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If a reception indication processing is aborted, then EthIf shall call Eth_ReleaseRxBuffer with the given RxHandleId.]

[SWS_EthIf_00639] Recpetion handling for PDUs with KeepLocalPduBuffer set to FALSE

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If LSduR_EthIfRxIndication returns and the used PDU-ID refer to a global PDU which has KeepLocalPduBuffer set to FALSE, then the EthIf shall perform the following actions:

- set the affected EthIfFrameRxPdu to state PDU_AVAILABLE
- release the local buffer produced for this PDU
- remove the mapping between the RxHandleId and the PDU-ID of the used EthIfFrameRxPdu
- call Eth_ReleaseRxBuffer with RxHandleId mapped to the given RxPduId

1

[SWS_EthIf_00640] Recpetion handling for PDUs with KeepLocalPduBuffer set to TRUE

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If LSduR_EthIfRxIndication returns and the used PDU-ID refer to a global PDU which has KeepLocalPduBuffer set to TRUE, then the EthIf shall keep the local

buffer and the state of the used PDU, until $Ethlf_ReleaseRxBuffer$ for the used PDU-ID is called.

[SWS Ethlf 00641] Handling if Ethlf ReleaseRxBuffer is called

Status: DRAFT

Upstream requirements: SRS BSW 00350, SRS BSW 00386

[If EthIf_ReleaseRxBuffer is called and the following conditions are true:

- the given PduId refer to a PDU-ID, where a mapping is stored to a corresponding RxHandleId
- the EthIfFrameRxPdu is in state PDU_IN_USE

then the Ethlf shall perform the following actions. Otherwise the function shall return with $\texttt{E}_N\texttt{OT}_\texttt{OK}$:

- set the affected EthIfFrameRxPdu to state PDU_AVAILABLE
- release the local buffer produced for this PDU
- remove the mapping between the RxHandleId and the PDU-ID of the used EthIfFrameRxPdu
- call Eth_ReleaseRxBuffer with RxHandleId mapped to the given RxPduId

Note:

- EthIf_ReleaseRxBuffer could be called by the upper layer in context of the LSduR_EthIfRxIndication
- Eth_ReleaseRxBuffer could be called by the EthIf in context of the EthIf_-RxIndication

7.1.12.2 Transmission

If EthIf is requested via a call of EthIf_Transmit to transmit a PDU, then EthIf need to check the availability of EthIfFrameTxPdu addressed with the given TxPduId. For an available EthIfFrameTxPdu, EthIf transform the given PduInfoPtr together with the given meta data to a frame-based API call towards the Eth driver. Whereat, the EthIf module need to consider the data provision of the upper layer. The EthIf module support transmission requests with "indirect data provision" and with "direct data provision":

• Indirect data provision: If EthIf_Transmit is called with PduIn-foPtr.SduDataPtr set to NULL_PTR, then the EthIf allocate a queue element at an egress queue with a call to Eth_ProvideTxBuffer, call the TriggerTransmit and call to EthIfTriggerTransmit and call

afterwards Eth_Transmit to trigger the transmission of the data stored in the allocated egress queue element.

• direct data provision: If EthIf_Transmit is called with PduIn-foPtr.SduDataPtr set to data pointer, then the EthIf prepare the data and forward the call directly to the Eth driver via a call of Eth_ImmediateTransmit

[SWS_EthIf_00670] Evaluation of transmission request with direct data provision

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_Transmit is called with PduInfoPtr.SduDataPtr set to a data pointer, then the EthIf shall proceed with an deferred forwarding, if the following conditions are true. Otherwise the EthIf shall proceed with an immediate forwarding:

- the given TxPduId match to a EthIfFrameTxPduId aggregated by a EthIfFrameTxPdu of a configured EthIfFrameTxPool
- the EthIfFrameTxPdus of this EthIfFrameTxPool have KeepLocalP-duBuffer set to FALSE
- the affected EthIfController refer to an EthIfPhysController that references an EthCtrlConfig at the Eth driver that have EthCtrlEnableEgressHardwareSupportedDataTransfer set to TRUE

1

[SWS_EthIf_00666] Transmission request with direct data provision and immediate forwarding

Status: DRAFT

Upstream requirements: SRS BSW 00350, SRS BSW 00386

[If EthIf qualified an immediate forwarding (see [SWS_EthIf_00670]) for a transmission request with direct data provision and the following conditions are true:

- the given TxPduId match to a EthIfFrameTxPduId aggregated by a EthIfFrameTxPdu of a configured EthIfFrameTxPool
- the referenced PDU of the matching EthIfFrameTxPduId is in state PDU_AVAILABLE

then the Ethlf shall perform the following actions as preparation for a call of Eth_-ImmediateTransmit. Otherwise the function shall return with E NOT OK:

- set the CtrlIdx parameter to the corresponding EthIfPhysController which belongs to the referencing EthIfController
- set the TxHandleId parameter to the matching EthIfFrameTxPduId of the used EthIfFrameTxPdu

- set priority to either configured value of EthIfFrameTxPriority of the corresponding EthIfFrameTxPool, if available, otherwise to the priority from the configured MetaDataItem PRIORITY_8
- create a list-element-struct of type ListElemStructType according to [SWS_EthIf_00667] and set the HeaderListPtr parameter to the address of the created list-element-struct
- set the PayloadPtr to the SduDataPtr given with the received PduInfoPtr and the PayloadLength to the SduLength given with the received PduInfoPtr foPtr
- call Eth_ImmediateTransmit with CtrlIdx, TxHandleId, priority, HeaderListPtr, PayloadPtr and PayloadLength set to values as described by the previous steps

[SWS_EthIf_00667] Creation of a list-element-struct of type ListElemStruct-Type

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf has to create a list-element-struct of type ListElemStructType due to a transmission request with direct data provision and the given TxPduId match to EthIfFrameTxPduId which reference a PDU that has MetaDataItemType ETH-ERNET_MAC_64 configured, then EthIf shall consider the following points to create a list-element-struct of type ListElemStructType:

- consume destination MAC address from the MetaDataItem ETHERNET_MAC_- 64
- derive the source MAC address from the EthCtrl which corresponds to the EthIfPhysController that is referenced by the EthIfController that belongs to the respective EthIfFrameTxPool
- use the EthIfFrameType of the EthIfFrameConfig which aggregates the EthIfFrameTxPool that refers to the used EthIfFrameTxPdu
- derive the VLAN-ID of the EthIfController which is referenced by the EthIfFrameTxPool of the used EthIfFrameTxPdu
- use either the configured priority value of EthIfFrameTxPriority of EthIfFrameTxPool which aggregates the used EthIfFrameTxPdu, if available, otherwise the priority of the configured MetaDataItem PRIORITY_8
- create an Ethernet header according the [19, IEEE 802.3 Std 2022] (Dst-MacAdr;SrcMacAdr;QTag;EtherType) and use the pointer to the constructed header for <code>DataPtr</code> and length of the Ethernet header for <code>DataLength</code> of the create a list-element-struct

• If the referenced PDU has MetaDataItemType LISTELEM_PTR configured, then consume the HeaderListPtr from MetaDataItem LISTELEM_PTR and set NextListElemPtr of the created list-element-struct to the address of the consumed HeaderListPtr. Otherwise set NextListElemPtr of the created list-element-struct to NULL PTR.

1

[SWS_EthIf_00671] Transmission request with direct data provision and deferred forwarding

Status: DRAFT

Upstream requirements: SRS BSW 00350, SRS BSW 00386

[If EthIf qualified a deferred forwarding (see [SWS_EthIf_00670]) for a transmission request with direct data provision and the following conditions are true:

- the given TxPduId match to a EthIfFrameTxPduId aggregated by a EthIfFrameTxPdu of a configured EthIfFrameTxPool
- the referenced PDU of the matching EthIfFrameTxPduId is in state PDU_AVAILABLE

then the Ethlf shall perform the following actions. Otherwise the function shall return with E_NOT_OK :

- mark the transmission request as direct data provision with deferred forwarding
- proceed with preparation for a call of Eth_ProvideTxBuffer according to [SWS_EthIf_00672]

[SWS_EthIf_00677] Return of Eth_ProvideTxBuffer for transmission request with direct data provision and deferred forwarding

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If Eth_ProvideTxBuffer returns with E_OK for transmission request with direct data provision and deferred forwarding, then EthIf shall perform the following actions, otherwise release all resources prepared for this call (see [SWS_EthIf_00672]) and return the EthIf_Transmit call with E_NOT_OK:

- if affected EthIfController has EthIfVlanId configured, then store the following frame attributes at the beginning of the provided BufPtr: priority (VLAN-priority) determined within the preparation for call of Eth_ProvideTxBuffer (see [SWS_EthIf_00672]), CFI (always 0), VID (configured EthIfVlanId) and the configured EthIfFrameType associated with EthIfFrameTxPdu
- copy data provided via PduInfoPtr.SduDataPtr with PduInfoPtr.SduDataLength to next position after the previous added frame attributes

- prepare a call of Eth_Transmit:
 - set the CtrlIdx parameter to the corresponding EthIfPhysController which belongs to the referencing EthIfController of the corresponding EthIfFrameTxPdu
 - set BufIdx which is assigned to this transmission request
 - set FrameType to configured EthIfFrameType associated with EthIfFrameTxPdu
 - set TxConfirmation to TRUE
 - set LenByte to total length of bytes written to the provided buffer addressed
 via BufPtr
 - set PhysAddrPtr to location where the MAC destination address associated with EthlfFrameTxPdu (see [SWS Ethlf 00672]) is available
 - call Eth_Transmit with CtrlIdx, BufIdx, FrameType, TxConfirmation, LenByte, PhysAddrPtr with values determined by previous steps

[SWS_EthIf_00678] Eth_Transmit return E_NOT_OK for transmission request with direct data provision and deferred forwarding

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If $Eth_Transmit$ returns with E_NOT_OK from a transmission request with direct data provision and deferred forwarding, then $EthIf_shall$ return the $EthIf_Transmit$ with E_NOT_OK |

[SWS Ethlf 00676] Transmission request with indirect data provision

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_Transmit is called with PduInfoPtr.SduDataPtr set to NULL_PTR and the following conditions are true:

- the given TxPduId match to a EthIfFrameTxPduId aggregated by a EthIfFrameTxPdu of a configured EthIfFrameTxPool
- the referenced PDU of the matching EthIfFrameTxPduId is in state PDU_-AVAILABLE

then the Ethlf shall perform the following actions. Otherwise the function shall return with E_NOT_OK :

• mark the transmission request as indirect data provision

• proceed with preparation for a call of Eth_ProvideTxBuffer according to [SWS EthIf 00672]

[SWS EthIf 00672] Preparation for call Eth_ProvideTxBuffer

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf is requested to perform a preparation for a call of Eth_ProvideTxBuffer, the following points shall be considered:

- set the CtrlIdx parameter to the corresponding EthIfPhysController which belongs to the referencing EthIfController
- set priority to either configured value of EthIfFrameTxPriority of the corresponding EthIfFrameTxPool, if available, otherwise to the priority from the configured MetaDataItem PRIORITY_8
- allocate buffer of type Eth_BufIdxType and set the BufIdxPtr to the allocated buffer
- consume MetaDataItem, if configured:
 - destination MAC address from the MetaDataItem ETHERNET MAC 64
 - time tuple from the MetaDataItem TIMETUPLE TYPE PTR
- allocate buffer for out-parameter BufPtr
- allocate buffer for the inout-paramter LenBytePtr and set the value to PduInfoPtr.SduDataLength, if the affected EthIfController has no EthIfVlanId configured or EthIfVlanId is set 0. Otherwise set the value to PduInfoPtr.SduDataLength + 4 as desired length
- create a mapping of EthIfFrameTxPdu, allocated buffer and consumed meta data
- call Eth_ProvideTxBuffer with CtrlIdx, priority, BufPtr and LenBytePtr set to values as described by the previous steps

[SWS_EthIf_00673] Return of Eth_ProvideTxBuffer for transmission request with indirect data provision

Status: DRAFT

Upstream requirements: SRS BSW 00350, SRS BSW 00386

[If Eth_ProvideTxBuffer returns with E_OK for transmission request with indirect data provision, then EthIf shall perform the following actions as preparation for a call of LSduR_EthIfTriggerTransmit, otherwise release all resources prepared for this

call (see [SWS_EthIf_00672]) and call LSduR_EthIfTxConfirmation with TxP-duId set to the corresponding EthIfFrameTxPdu and result set to E_NOT_OK:

- if affected EthIfController has EthIfVlanId configured, then store the following frame attributes at the beginning of the provided BufPtr: priority (VLAN-priority) determined within the preparation for call of Eth_ProvideTxBuffer (see [SWS_EthIf_00672]), CFI (always 0), VID (configured EthIfVlanId) and the configured EthIfFrameType associated with EthIfFrameTxPdu
- if affected EthIfController has EthIfVlanId configured, then set PduInfoPtr.SduDataLength to value of LenBytePtr 4, otherwise set value to PduInfoPtr.SduDataLength to LenBytePtr as output granted length
- if affected EthIfController has EthIfVlanId configured, set PduInfoPtr.SduDataPtr to BufPtr + offset of 4, otherwise set PduInfoPtr.SduDataPtr to BufPtr
- assign the egress buffer idenitifier provided via <code>BufIdxPtr</code> to this transmission request identified with <code>EthIfFrameTxPduId</code> of the corresponding <code>EthIfFrameTxPdu</code> eTxPdu
- call LSduR_EthIfTriggerTransmit with TxPduId set to the corresponding EthIfFrameTxPdu and PduInfoPtr with values of the previous steps

[SWS_EthIf_00674] Return of $LSduR_EthIfTriggerTransmit$ for transmission request with indirect data provision

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If LSduR_EthIfTriggerTransmit returns with E_OK from a transmission request with indirect data provision, then EthIf shall perform the following actions as preparation for a call of Eth_Transmit, otherwise release all resources prepared for this call (see [SWS_EthIf_00673]) and call LSduR_EthIfTxConfirmation with TxPduId set to the corresponding EthIfFrameTxPdu and result set E_NOT_OK:

- set the CtrlIdx parameter to the corresponding EthIfPhysController which belongs to the referencing EthIfController of the corresponding EthIfFrameTxPdu
- set BufIdx which is assigned to this transmission request (see [SWS EthIf 00673])
- set FrameType to configured EthIfFrameType associated with EthIfFrameType eTxPdu
- set TxConfirmation to TRUE

- set LenByte to accumulated length returned via PduIn-foPtr.SduDataLength and length of stored frame attributes prepared for a call of Eth_ProvideTxBuffer (see [SWS_EthIf_00673])
- set PhysAddrPtr to location where the MAC destination address associated with EthIfFrameTxPdu (see [SWS EthIf 00672]) is available
- call Eth_Transmit with CtrlIdx, BufIdx, FrameType, TxConfirmation, LenByte, PhysAddrPtr with values determined by previous steps

[SWS_EthIf_00675] Eth_Transmit return E_NOT_OK for transmission request with indirect data provision

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If Eth_Transmit returns with E_NOT_OK from a transmission request with indirect data provision, then EthIf shall call LSduR_EthIfTxConfirmation with TxPduId set to the corresponding EthIfFrameTxPdu and result set E_NOT_OK|

[SWS_EthIf_00600] Finalization of transmission request with direct or indirect data provision

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If Eth_ImmediateTransmit or Eth_Transmit returns with E_OK and the used PDU-ID refer to a global PDU which has <code>KeepLocalPduBuffer</code> set to <code>TRUE</code>, then the EthIf shall keep the local buffer and the state of the used PDU, until <code>EthIf_-TxConfirmation</code> for the used PDU-ID is called. In all other cases, where EthIf calls <code>Eth_ImmediateTransmit</code> or <code>Eth_Transmit</code>, the buffer for local produced data of the affected PDU shall be released.

7.1.12.3 Transmission confirmation

[SWS_EthIf_00644]

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If EthIf_TxConfirmation is called and the following conditions are true:

- the given Bufldx and Ctrlldx refer to a EthlfFrameTxPdu (given in previous call of Eth_ImmediateTransmit as TxHandleId or given with previous call of Eth_Transmit as Bufldx
- the affected EthIfFrameTxPdu is in state PDU IN USE

then the Ethlf shall perform the following action, otherwise abort transmission processing and return:

- set the affected PDU of EthIfFrameTxPdu to state PDU_AVAILABLE
- call LSduR_EthIfTxConfirmation with TxPduId set to PDU-ID referenced EthIfFrameTxPdu

[SWS_EthIf_00115] Polling mode to trigger transmission confirmation [In each call of $EthIf_MainFunctionTx$ the component shall call $<EthDrv>_TxConfirmation$ for all Ethernet Controller Drivers.

Note: The Ethernet Interface expects that each Ethernet Controller Driver issues confirmations for all transmitted frames using the call-back function EthIf_TxConfirmation.

7.1.12.4 State handling of PDUs

The EthIf module has to maintain the usage-state of PDUs from the according PDU-pool. Therefore PDUs have two states PDU_IN_USE or PDU_AVAILABLE.

Note: The definition of PDU_IN_USE or PDU_AVAILABLE represents only the functional behavior, but not the implementation, since the state of a PDU is kept locally and is not propagated to other modules. Therefore, no type definition for the PDU state is specified.

[SWS_EthIf_00645]

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[The EthIf module shall maintain for each PDU of all configured EthIfFrameRxPdus and EthIfFrameTxPdus two states: state PDU_AVAILABLE and state PDU_IN_USE |

[SWS Ethlf 00646]

Status: DRAFT

Upstream requirements: SRS BSW 00350, SRS BSW 00386

[If the EthIf module is requested to transmit data or is indicated to receive data, or if transmission confirmation or release reception buffer is indicated, then the EthIf module shall check the state of the PDU according the given PDU-ID:

 If the PDU of the given PDU-ID is in state PDU_AVAILABLE and requested to be transmitted or indicated to be received, then the EthIf module shall set the state of this PDU to PDU_IN_USE. Otherwise the EthIf module shall abort further

handling, report a runtime error ETHIF_E_PDU_STATE_TRANSITION_FAILED and, if possible return with E_NOT_OK.

• If the PDU of the given PDU-ID is in state PDU_IN_USE and transmission confirmation or release reception buffer is indicated, then the EthIf module shall set the state of this PDU to PDU_AVAILABLE. Otherwise the EthIf module shall abort further handling, report an runtime error ETHIF_E_PDU_STATE_TRANSITION_FAILED and return.

[SWS Ethlf 00647]

Status: DRAFT

Upstream requirements: SRS_BSW_00350, SRS_BSW_00386

[If the EthIf module is requested to transmit data and the function call <code>Eth_ImmediateTransmit</code> or <code>Eth_Transmit</code> returns with <code>E_NOT_OK</code>, then the <code>IEEE1722Tp</code> module shall set the state of the affected PDU to <code>PDU_AVAILABLE</code>.

7.1.12.5 Meta data handling

The EthIf module uses meta data as specified in [6, CP-SWS-BSWGeneral]. Meta data are addressed with the MetaDataPtr, which is part of the PduInfoPtr. Basically, the EthIf module act as intermediate layer to transfer provided (frame-based) data from the Ethernet driver to the upper layer as PDUs, and to transfer PDUs from the upper layer communication stack to Ethernet driver as frame-related API call. In both directions the EthIf module need to translate between the frame-based approach and the PDU-based approach and vice versa. The following communication scenarios have to be considered:

- UpperLayer-To-LowerLayer-TxData: upper layer (e.g. IEEE1722Tp) data transmission via the LSduR module to EthIf
- LowerLayer-To-UpperLayer-RxData: EthIf reception indication of Ethernet frame, transformation of data PDU-based approach and forwarding of data to upper layer (e.g. IEEE1722Tp) via LSduR

7.1.12.5.1 Meta data types

This sub chapter describe the expected meta data types, which are produces or consumed by Ethlf.

[SWS_EthIf_CONSTR_00002]

Status: DRAFT

[A PDU which refer to an EthIfFrameRxPdu, shall have no other MetaDataItem of MetaDataItemType configured than:

```
• TIMETUPLE_TYPE_PTR
```

- ETHERNET MAC 64
- BROADCAST_8

[SWS_EthIf_CONSTR_00003]

Status: DRAFT

[A PDU which refer to an EthlfFrameTxPdu, shall have no other MetaDataItem of MetaDataItemType configured than:

```
• ETHERNET_MAC_64
```

- PRIORITY_8
- TIMETUPLE_TYPE_PTR
- LISTELEM_PTR
- VLAN_16

7.1.12.6 Ingress queue handling

The Ethernet interface module support different approaches for ingress queue handling. Ingress queue handling higly depends on the configured ingress queue processing in context of the Ethernet driver. The Ethernet driver support the following approaches:

- all ingress queues of an specific Ethernet controller are handled in interrupt mode
- all ingress queues of an specific Ethernet controller are handled in polling mode
- specific ingress queue of an specific Ethernet controller handled in interrupt mode and the remaing ingress queues in polling mode

The polling mode need to destinguish which function is reponsible for polling a specific ingress queue:

1. If an EthIfPhysController reference multiple ingress queues via EthIf-PhysCtrlRxMainFunctionIngressQueueProcessing, then the referenced

queues handled in a specific EthIf_MainFunctionRx_<IngressQueueProcessing ShortName>

- 2. If the corresponding EthController of an EthIfPhysController have ingress queues configured with an EthCtrlConfigIngressQueueHandlerFunction, then this ingress queue is handled within an specific ingress queue handler function. The scheduling of this function is integration specific (e.g. scheduled by an CDD or mapped to an Os task)
- 3. All ingress queues which have no specific ingress queue handler function configured, are handled in the context of the EthIf_MainFunctionRx

The Ethernet driver support to handle specific ingress queues in interrput mode A <code>EthIfPhysControllercould</code> configure multiple Rx mainfunctions to handle specific ingress queues by using <code>EthIfPhysCtrlRxMainFunctionIngressQueue-Processing</code>. A <code>EthIfPhysCtrlRxMainFunctionIngressQueueProcessing</code> could reference one ingress queue via <code>EthIfCanXLCtrlRxIngressFifoRef</code> or <code>EthIfPhysCtrlRxIngressQueueRef</code>. Along with this reference a specific main function is generated (see <code>EthIf_MainFunctionRx_<IngressQueueProcessing ShortName>)</code>, where the ingress queue handler is implemented.

[SWS Ethlf CONSTR 00004]

Status: DRAFT

[If a EthIfPhysController have EthIfPhysCtrlRxMainFunction-IngressQueueProcessing configured and reference ingress queues via EthIfPhysCtrlRxIngressQueueRef Or EthIfCanXLCtrlRxIngressFifoRef, then the configuration shall be qualified as valid, if the referenced ingress queues have neither EthCtrlConfigIngressQueueHandlerFunction nor EthCtrlEnableIngressQueueInterrupt set to TRUE configured]

[SWS Ethlf CONSTR 00005]

Status: DRAFT

[If a EthIfPhysController have EthIfPhysCtrlRxMainFunction-IngressQueueProcessing configured, then the referenced ingress queues via EthIfPhysCtrlRxIngressQueueRef or EthIfCanXLCtrlRxIngress-FifoRef shall be handled by the corresponding EthIf_MainFunctionRx_
<IngressQueueProcessing ShortName>

The generic EthIf_MainFunctionRx could perform a polling for all ingress queues, which are not handled by other ingress handler functions. Other ingress queue handler functions could be provided by the EthIf or by the Eth driver. The existence of other handler functions influences the ingress queue handling of EthIf_MainFunctionRx.

[SWS Ethlf 00648]

Status: DRAFT

Upstream requirements: SRS_Eth_00170

[If EthIf has EthIfEnableRxInterrupt is set to FALSE, then the EthIf_Main-FunctionRx shall perform the polling for ingress queues where all following conditions apply:

- an ingress queue is neither referenced by EthIfPhysCtrlRxIngressQueueRef nor by EthIfCanXLCtrlRxIngressFifoRef
- an ingress queue at the Ethernet driver has EthCtrlEnableIngressQueueInterrupt set to FALSE
- an ingress queue at the Ethernet driver has no EthCtrlConfigIngressQueueHandlerFunction configured

7.1.13 Global Time support

For more details regarding time measurement with Switches, please refer to [20, Specification of Ethernet Switch Driver].

7.1.14 Wireless Ethernet Support

[SWS_EthIf_00340] [The Ethernet Interface shall support Wireless Ethernet specific functionality, depending on the parameter EthIfEnableWEthApi.]

The Wireless functions are divided in controller and transceiver specific functionality. Mainly, transmission and reception parameters are being exchanged with the Ethlf upper module and the controller/transceiver.

The controller is being called only for buffer specific transmission and reception parameters by the APIs:

- EthIf_GetBufWRxParams
- EthIf GetBufWTxParams
- EthIf SetBufWTxParams

The Transceiver is being called for general configuration of the wireless radio and the wireless radio's channel by:

• EthIf_SetRadioParams

- EthIf_SetChanRxParams
- EthIf_SetChanTxParams
- EthIf_GetChanRxParams

The parameter values are requested or transmitted by unique parameter identifiers. They are defined within the controller and transceiver specification [16] [21].

7.1.15 Cellular V2X Support

[SWS_EthIf_00520]

Status: DRAFT

The Ethernet Interface shall support Cellular V2X specific functionality, depending on the parameter EthIfEnableCV2xApi

Transmission and reception parameters are being exchanged with the EthIf upper module and the controller. The controller is being called only for buffer specific transmission and reception parameters by the APIs:

- EthIf_GetBufCV2xPC5RxParams
- EthIf GetBufCV2xPC5TxParams
- EthIf SetBufCV2xPC5TxParams

The controller is being called for general configuration of the Cellular V2X radio and the Cellular V2X radio's channel by:

• EthIf GetChanCV2xPC5TxParams

The parameter values are requested or transmitted by unique parameter identifiers. They are defined within the controller specification [22].

7.1.16 MACsec support

[SWS_EthIf_00560]

Status: DRAFT

Upstream requirements: FO RS MACsec 00001

[The Ethernet Interface shall support MACsec as a SW implementation as specified in [23].]

[SWS Ethlf 00561]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00004

The Ethernet Interface shall support configuring which Ethernet Interface Controllers are MACsec protected.

[SWS Ethlf 00562]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00004

The Ethernet Interface shall support configuring per Ethernet Interface Controller the MACsec Entity to use (per SW or HW i.e., offloaded).

Note: This is included per configuration with the parameter EthlfMacSecSupport.

[SWS Ethlf 00563]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00007

[The MACsec Entity per SW of the Ethernet Interface shall provide a mechanism to configure rules to bypass MACsec for incoming and outgoing traffic based on Ether-Type and/or VLAN-ID. All traffic not configured as bypassed traffic shall be processed by the MACsec entity or dropped. This configuration shall be supported at initial configuration time of the Ports.

[SWS Ethlf 00564]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00009

The MACsec entity per SW of the Ethernet Interface shall support status counters for the following information, which may be attached to IDSM functionality:

- Dropped frames because of incorrect ICV per port.
- Unsuccessful MKA sequence per peer.
- Additionally, all the port statistics required by [23].

[SWS Ethlf 00565]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00010

[The MACsec entity per SW of the Ethernet Interface shall support "Integrity only" as well as "Integrity with Confidentiality" for all supported ciphers.

[SWS Ethlf 00566]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00011

[The MACsec entity per SW of the Ethernet Interface shall support MAC Security TAG (SecTAG) as defined in [23]. The SecTAG shall convey:

- TAG Control Information (TCI)
- Association Number (AN)
- Short Length (SL)
- Packet Number (PN)
- Secure Channel Identifier (SCI) Optional

[SWS Ethlf 00567]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00012

The MACsec entity per SW of the Ethernet Interface shall support MACsec EtherType as defined in [23].

[SWS_EthIf_00568]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00011

The MACsec entity per SW of the Ethernet Interface shall support TAG Control Information (TCI) as defined in [23]. The TCI shall be encoded in the SecTAG.

[SWS_EthIf_00569]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00011

[The MACsec entity per SW of the Ethernet Interface shall support Association Number (AN) as defined in [23]. The AN shall be encoded in the SecTAG.]

[SWS Ethlf 00570]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00011

[The MACsec entity per SW of the Ethernet Interface shall support Short Length (SL) as defined in [23]. The SL shall be encoded in the SecTAG.

[SWS Ethlf 00571]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00011

[The MACsec entity per SW of the Ethernet Interface shall support Packet Number (PN) with 32 least significant bits, as defined in [23]. The PN shall be encoded in the SecTAG.

[SWS Ethlf 00572]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00017

[The MACsec entity per SW of the Ethernet Interface shall support Extended Packet Number (XPN) as defined in [23]. The XPN extends the PN to 64 bits.

[SWS Ethlf 00573]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00018

[The MACsec entity per SW of the Ethernet Interface shall support Secure Channel Identifier (SCI), as defined in [23]. The SCI may be encoded in the SecTAG if SCI is required to be sent.

[SWS Ethlf 00574]

Status: DRAFT

Upstream requirements: FO RS MACsec 00019

[The MACsec entity per SW of the Ethernet Interface shall support Secure Data as defined in [23]. |

[SWS_EthIf_00575]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00020

[The MACsec entity per SW of the Ethernet Interface shall support Integrity check value (ICV) as defined in [23]. The ICV length depends on the used cipher suite but is not less than 8 octets and not more than 16 octets. The transmitted ICV is always 16 octets.]

[SWS_EthIf_00576]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00021

The MACsec entity per SW of the Ethernet Interface shall support a protect function as specified in [23].

[SWS Ethlf 00577]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00022

The MACsec entity per SW of the Ethernet Interface shall support a validation function as specified in [23].

[SWS Ethlf 00578]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00032

The MACsec entity per SW of the Ethernet Interface shall support the following ciphers suites:

- GCM-AES-128
- GCM-AES-256
- GCM-AES-XPN-128
- GCM-AES-XPN-256

[SWS_EthIf_00579]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00033

The MACsec entity per SW of the Ethernet Interface shall support a validation function for MACsec ICV.

[SWS Ethlf 00580]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00034

The MACsec entity per SW of the Ethernet Interface shall support a generation function for MACsec ICV.

[SWS Ethlf 00581]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00002

[The Ethernet Interface Module shall share the MACsec Operational status between Ethernet Interface Controllers sharing a physical or virtual controlled port. An Ethernet Interface controller shall trigger the MKA Module to start the MKA sequence in a port with MKA_LinkStateChange after receiving the "Mode Indication" from the Switch or Transceiver with the corresponding function EthIf_SwitchPortModeIndication or EthIf_TrcvModeIndication.

[SWS Ethlf 00582]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00002

[Once the physical or virtual port can generate and validate MACsec traffic (signaled by EthIf_MacSecOperational), all Controllers using the virtual or physical port shall immediately communicate the MacSecOperational status to the upper layers with EthSM_TrcvLinkStateChg.

[SWS Ethlf 00583]

Status: DRAFT

Upstream requirements: FO_RS_MACsec_00023

[The Ethernet Interface module shall support the MKA related EtherTypes as defined in [23].]

[SWS_EthIf_00584]

Status: DRAFT

The Ethernet Interface module shall allow forwarding the received Ethernet frames of a specific EtherType to multiple frame owners if configured.

7.1.17 Firewall support

The Ethernet stack supports firewalling of network packets by means of the firewall module. The firewall support is managed by the parameter EthlfFwSupport.

[SWS_EthIf_00668] Handling if EthIffwSupport is set to FIREWALL_WITHOUT_-PERSTREAMFILTERING

Status: DRAFT

[If EthIffwSupport is set to FIREWALL_WITHOUT_PERSTREAMFILTERING, EthIf shall set FILTER_RULE_ID_16 in the PDU MetaData to 0xFFFF.]

[SWS_EthIf_00669] Handling if EthIfFwSupport is set to FIREWALL_WITH_PER-STREAMFILTERING

Status: DRAFT

[If EthIffwSupport is set to FIREWALL_WITH_PERSTREAMFILTERING, EthIf shall call EthSwt_ExtractStreamHandleIdx to set the FILTER_RULE_ID_16 in the PDU MetaData to the value stored at the StreamHandleIdxPtr.]

Call forwarding to the switch

The firewall has some interactions with the Ethernet Switch Driver for some use-cases. The EthIf module has thus to forward these calls.

[SWS Ethlf 00592]

Status: DRAFT

[If EthIf_GetStreamStatistics is called, the EthIf module shall call EthSwt_-GetStreamStatistics with the same parameters.]

[SWS_EthIf_00662] Forwarding of stream statistics indications to firewall module

Status: DRAFT

[When the respective callback function $EthIf_StreamStatisticsIndication$ is called, the EthIf module shall call $Fw_StreamStatisticsIndication$ with the same parameters.

[SWS Ethlf 00593]

Status: DRAFT

[If EthIf_SetStreamState is called, the EthIf module shall call EthSwt_Set-StreamState with the same parameters. When the respective callback function EthIf_StreamStateIndication is called, the EthIf module shall call Fw_Stream-StateIndication with the same parameters.|

7.2 Security Events

[SWS_EthIf_00502]

Status: DRAFT

Upstream requirements: RS_lds_00810

[If security event reporting has been enabled for the EthIf module (EthIfEnableSecurityEventReporting = true) the respective security events shall be reported to the IdsM via the interfaces defined in AUTOSAR SWS BSWGeneral [6].

The following table lists the security events which are standardized for the Ethlf together with their trigger conditions:

[SWS_EthIf_00503] Security events for EthIf

Status: DRAFT

Upstream requirements: RS_lds_00810

Γ

Name	Description	ID
SEV_ETH_DROP_UNKNOWN_ETHERTYPE	An ethernet datagram was dropped due the Ethertype is not known.	15
SEV_ETH_DROP_VLAN_DOUBLE_TAG	An ethernet datagram was dropped due to double VLAN tag.	16
SEV_ETH_DROP_INV_VLAN	An ethernet datagram was dropped due to an invalid Crtl Idx/VLAN.	17
SEV_ETH_DROP_MAC_COLLISION	Ethernet datagram was dropped because local MAC was same as source MAC in an incoming frame.	18

Context data is not provided by the Ethlf for the security events.

7.3 Error Classification

Section "Error Handling" of the document [6] "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

7.3.1 Development Errors

[SWS_EthIf_00017] Definiton of development errors in module EthIf [

Type of error	Related error code	Error value
API service called with invalid controller index	ETHIF_E_INV_CTRL_IDX	0x01
API service called with invalid transceiver index	ETHIF_E_INV_TRCV_IDX	0x02
API service called with invalid switch index	ETHIF_E_INV_SWT_IDX	0x03
API service called with invalid port group index	ETHIF_E_INV_PORT_GROUP_IDX	0x04
API service called when Ethlf module was not initialized	ETHIF_E_UNINIT	0x05
API service called with invalid pointer in parameter list	ETHIF_E_PARAM_POINTER	0x06
API service called with invalid parameter	ETHIF_E_INV_PARAM	0x07

 \triangle

Type of error	Related error code	Error value
Ethlf_Init called with an invalid configuration pointer	ETHIF_E_INIT_FAILED	0x08
Invalid port index	ETHIF_E_INV_PORT_IDX	0x09

7.3.2 Runtime Errors

[SWS_EthIf_91136] Definiton of runtime errors in module EthIf

Upstream requirements: SRS_BSW_00385

Γ

Type of error	Related error code	Error value
A PDU is requested to be used while it is already in use or requested to be available while it is already available	ETHIF_E_PDU_STATE_TRANSITION_FAILED	0x01
Tags: atp.Status=draft		

7.3.3 Production Errors

There are no production errors.

7.3.4 Extended Production Errors

There are no extended production errors.

8 API specification

8.1 API Parameter Checking

[SWS Ethlf 00652] DET error reporting of ETHIF_E_PARAM_POINTER

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

[The EthIf module reports the development error ETHIF_E_PARAM_POINTER when a NULL_PTR is not accepted as an argument to a service or callback function. The exact behavior is specified in [SWS_BSW_00050] and [SWS_BSW_00212]|

[SWS Ethlf 00653] DET error reporting of ETHIF_E_INV_CTRL_IDX

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

[The Ethlf APIs which has the parameter Ctrlldx shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETHLF_E_INV_CTRL_IDX when the development error detection is enabled.]

[SWS_EthIf_00654] DET error reporting of ETHIF_E_INV_TRCV_IDX

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

The EthIf APIs which has the parameter TrevIdx shall check the parameter TrevIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_TRCV_IDX when the development error detection is enabled.

[SWS_EthIf_00655] DET error reporting of ETHIF_E_INV_SWT_IDX

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

[The EthIf APIs which has the parameter SwitchIdx shall check the parameter SwitchIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_SWT_IDX when the development error detection is enabled.]

[SWS_EthIf_00656] DET error reporting of ETHIF_E_INV_PORT_GROUP_IDX

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

[The Ethlf APIs which has the parameter PortGroupIdx shall check the parameter PortGroupIdx for being valid. If the check fails, the function shall raise the development error ETHLF_E_INV_PORT_GROUP_IDX when the development error detection is enabled.]

[SWS Ethlf 00657] DET error reporting of ETHIF_E_INV_PORT_IDX

Upstream requirements: SRS_BSW_00323, SRS_BSW_00337

The EthIf APIs which has the parameter SwitchPortIdx shall check the parameter SwitchPortIdx for being valid. If the check fails, the function shall raise the

development error ${\tt ETHIF_E_INV_PORT_IDX}$ when the development error detection is enabled.

[SWS_EthIf_00658] DET error reporting of ETHIF_E_INV_PARAM

Upstream requirements: SRS BSW 00323, SRS BSW 00337

[The EthIf APIs which has the parameter BufIdx shall check the parameter BufIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_PARAM when the development error detection is enabled.

8.2 Imported types

This chapter lists all types included from the following module:

[SWS Ethlf 00023] Definition of imported datatypes of module Ethlf

Module	Header File	Imported Type
Comtype	ComStack_Types.h	BufReq_ReturnType
	ComStack_Types.h	ListElemStructType (draft)
	ComStack_Types.h	PduldType
	ComStack_Types.h	PduInfoType
	ComStack_Types.h	PduLengthType

8.3 Type definitions

8.3.1 Ethlf_ConfigType

[SWS_EthIf_00149] Definition of datatype EthIf_ConfigType [

Name	EthIf_ConfigType
Kind	Structure
Description	Implementation specific structure of the post build configuration
Available via	Ethlf.h

8.3.2 Ethlf_SwitchPortGroupIdxType

[SWS_EthIf_91101] Definition of datatype EthIf_SwitchPortGroupIdxType [

Name	EthIf_SwitchPortGroupIdxType		
Kind	Туре		
Derived from	uint8		
Range	0255 – –		
Description	Data Type that represents the Ethernet interface switch port group index. The index is zero based and unique for every configured switch port group.		
Available via	Ethlf.h		

1

8.3.3 Ethlf MeasurementldxType

[SWS_EthIf_91010] Definition of datatype EthIf_MeasurementIdxType [

Name	EthIf_MeasurementIdxType		
Kind	Туре		
Derived from	uint8		
Range	ETHIF_MEAS_DROP_ CRTLIDX	0x01	Measurement index of dropped datagrams caused by invalid Crtl Idx/VLAN
	ETHIF_MEAS_ RESERVED_1	0x02-0x7F	reserved by AUTOSAR
	ETHIF_MEAS_ RESERVED_2	0x80-0xEF	Vendor specific range

 \triangle

	ETHIF_MEAS_ RESERVED_3	0xF0-0xFE	reserved by AUTOSAR (future use)
	ETHIF_MEAS_ALL	0xFF	represents all measurement indexes
Description	Index to select specific measurement data		
Available via	Ethlf.h		

1

8.3.4 Ethlf_SignalQualityResultType

[SWS_EthIf_91057] Definition of datatype EthIf_SignalQualityResultType [

Name	EthIf_SignalQualityResultType	
Kind	Structure	
Elements	HighestSignalQuality	
	Туре	uint32
	Comment	the highest signal quality of a link since last clear
	LowestSignalQuality	
	Type uint32	
	Comment the lowest link signal quality of a link since last clear	
	ActualSignalQuality	
	Type uint32	
	Comment the actual signal quality	
Description	-	
Available via	Ethlf.h	

8.4 Function definitions

This is a list of functions provided for upper layer modules.

Note: All functions in this chapter requires previous initialization (EthIf_Init), except the following ones: EthIf_Init, EthIf_GetVersionInfo

8.4.1 Driver

8.4.1.1 Ethlf_SetControllerMode

[SWS_EthIf_00034] Definition of API function EthIf_SetControllerMode [

Service Name	Ethlf_SetControllerMode		
Syntax	Std_ReturnType EthIf_SetControllerMode (uint8 CtrlIdx, Eth_ModeType CtrlMode)		
Service ID [hex]	0x03		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Ethernet Interface		
	CtrlMode	ETH_MODE_DOWN: disable the controller	
		ETH_MODE_ACTIVE: enable the controller	
	ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST: enable the controller and request a wake-up on the network. ETH_MODE_TX_OFFLINE: disable transmission handling in Eth If. Please note, the according Ethernet controller is not affected		
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType E_OK: success E_NOT_OK: controller mode could not be changed		
Description	Enables / disables the indexed controller		
Available via	Ethlf.h		

Note: Further requirements regarding the call of EthIf_SetControllerMode are described in chapter 7.1.10.2 and 7.1.11.

8.4.1.2 Ethlf_GetControllerMode

[SWS_EthIf_00039] Definition of API function EthIf_GetControllerMode [

Service Name	EthIf_GetControllerMode	
Syntax	Std_ReturnType EthIf_GetControllerMode (uint8 CtrlIdx, Eth_ModeType* CtrlModePtr)	
Service ID [hex]	0x04	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	

 \triangle

Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
Parameters (inout)	None	
Parameters (out)	CtrlModePtr	ETH_MODE_DOWN: the controller is disabled ETH_MODE_ ACTIVE: the controller is enabled
Return value	Std_ReturnType	E_OK: success E_NOT_OK: controller could not be initialized
Description	Obtains the state of the indexed controller	
Available via	Ethlf.h	

[SWS_EthIf_00040] [The function $EthIf_GetControllerMode$ shall forward the call to function $EthDrv_GetControllerMode$ of the corresponding Ethernet Controller Driver EthIfPhysControllerIdx.

8.4.1.3 Ethlf_GetPhysAddr

[SWS_EthIf_00061] Definition of API function EthIf_GetPhysAddr [

Service Name	Ethlf_GetPhysAddr	
Syntax	<pre>void EthIf_GetPhysAddr (uint8 CtrlIdx, uint8* PhysAddrPtr)</pre>	
Service ID [hex]	0x08	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
Parameters (inout)	None	
Parameters (out)	PhysAddrPtr	Physical source address (MAC address) in network byte order.
Return value	None	
Description	Obtains the physical source address used by the indexed controller	
Available via	Ethlf.h	

[SWS_EthIf_00062] [The function $EthIf_GetPhysAddr$ shall forward the call to the respective Ethernet Controller Driver.]

8.4.1.4 Ethlf_SetPhysAddr

[SWS_EthIf_00132] Definition of API function EthIf_SetPhysAddr [

Service Name	EthIf_SetPhysAddr	
Syntax	void EthIf_SetPhysAddr (uint8 CtrlIdx, const uint8* PhysAddrPtr)	
Service ID [hex]	0x0d	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant for the same Ctrlldx, reentrant for different	
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Driver.
	PhysAddrPtr	Pointer to memory containing the physical source address (MAC address) in network byte order.
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Sets the physical source address used by the indexed controller.	
Available via	Ethlf.h	

8.4.1.5 Ethlf_UpdatePhysAddrFilter

[SWS_EthIf_00139] Definition of API function EthIf_UpdatePhysAddrFilter [

Service Name	Ethlf_UpdatePhysAddrFilter	
Syntax	<pre>Std_ReturnType EthIf_UpdatePhysAddrFilter (uint8 CtrlIdx, const uint8* PhysAddrPtr, Eth_FilterActionType Action)</pre>	
Service ID [hex]	0x0c	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant for the same Ctrlldx, reentrant for different	
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Driver.
	PhysAddrPtr	Pointer to memory containing the physical destination address (MAC address) in network byte order. This is the multicast destination address of the layer 2 Ethernet packet.
	Action	Add or remove the address from the Ethernet controllers filter.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: filter was successfully changed E_NOT_OK: filter could not be changed

 \triangle

Description	Update the physical source address to/from the indexed controller filter. If the Ethernet Controller is not capable to do the filtering, the software has to do this.	
Available via	Ethlf.h	

[SWS_EthIf_00140] [The function <code>EthIf_SetPhysAddrFilter</code> shall forward the call to the respective Ethernet Controller Driver.]

8.4.1.6 Ethlf_GetPortMacAddr

[SWS_EthIf_00190] Definition of API function EthIf_GetPortMacAddr [

Service Name	Ethlf_GetPortMacAddr	
Syntax	Std_ReturnType EthIf_GetPortMacAddr (const uint8* MacAddrPtr, uint8* SwitchIdxPtr, uint8* PortIdxPtr)	
Service ID [hex]	0x28	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	MacAddrPtr	MAC-address for which a switch port is searched over which the node with this MAC-address can be reached.
Parameters (inout)	None	
Parameters (out)	SwitchldxPtr	Pointer to the switch index
	PortldxPtr	Pointer to the port index
Return value	Std_ReturnType	E_OK: success E_NOT_OK: an error occurred, e.g. multiple ports were found
Description	Obtains the port over which this MAC-address can be reached	
Available via	Ethlf.h	

1

[SWS_EthIf_00191] [The function EthIf_GetPortMacAddr shall return the switch and port index over which the given MAC-address is reachable. If multiple or no ports are possible, this API call will return E_NOT_OK. EthSwt_GetPortMacAddr will be called for all Ethernet Switch drivers.]

[SWS_EthIf_00192] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGetPortMacAddrVlanApi.]

8.4.1.7 Ethlf_GetPortMacAddrVlan

[SWS_EthIf_91140] Definition of API function EthIf_GetPortMacAddrVlan

Service Name	EthIf_GetPortMacAddrVlan		
Syntax	Std_ReturnType EthIf_GetPortMacAddrVlan (uint8 SwitchIdx, const uint8* MacAddrPtr, const uint16* VlanIdPtr, uint32* PortBitMapPtr		
Service ID [hex]	0x9d		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the Ethernet switch within the context of the Ethernet Switch Driver	
	MacAddrPtr	MAC-address which is requested to look-up the assignment to an Ethernet switch port	
	VlanIdPtr	VlanId which is requested to look-up the assignment to an Ethernet switch port	
Parameters (inout)	None	None	
Parameters (out)	PortBitMapPtr	Returns a pointer to an Ethernet switch port bit map, where the requested MAC-address with respect to the given VLAN-ID is available	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: request could not be successfully finalized, due to several possible reasons (e.g. requested Ethernet switch addressed with switchldx is not valid or inactive)	
Description	Obtains a Ethernet switch port bit map, where the given MAC-address with respect to the given VLAN-ID is assigned to. The return argument PortBitMapPtr points to uint32 value which shall be handled as Ethernet switch port bit map. Each bit of the Ethernet switch port bit map represents a EthSwtPortIdx, where the least significant bit (bit 0) represents EthSwichtPortIdx 0 and most signification bit (bit 32) represents EthSwichtPortIdx 31 (e.g. 0x0001 == EthSwicht PortIdx 0 is set; 0x8005 == EthSwichtPortIdx 0, 2 and 31 are set		
Available via	Ethlf.h	Ethlf.h	

[SWS_Ethlf_00659] Behaviour if function is called

Upstream requirements: SRS_Eth_00182

[The function EthIf_GetPortMacAddrVlan shall forward the call to the EthSwt driver by calling EthSwt_GetPortMacAddrVlan.]

[SWS_EthIf_00660] Pre compile configuration switch

Upstream requirements: SRS_Eth_00182

[The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfGetPortMacAddrVlanApi.|

8.4.1.8 Ethlf_GetArlTable

[SWS_EthIf_00196] Definition of API function EthIf_GetArlTable [

Service Name	Ethlf_GetArlTable		
Syntax	Std_ReturnType EthIf_GetArlTable (uint8 switchIdx, uint16* numberOfElements, Eth_MacVlanType* arlTableListPointer)		
Service ID [hex]	0x29		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	switchldx Index of the switch within the context of the Ethernet Switch Driver		
Parameters (inout)	numberOfElements	In: Maximum number of elements which can be written into the arlTable Out: Number of elements which are currently available in the EthSwitch module.	
Parameters (out)	arlTableListPointer	Returns a pointer to the memory where the ARL table of the switch consisting of a list of structs with MAC-address, VLAN-ID and port shall be stored.	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: requested switchldx is not valid or inactive	
Description	Obtains the address resolution table of a switch and copies the list into a user provided buffer. The function will copy all or numberOfElements into the output list. If input value of numberOf Elements is 0 the function will not copy any data but only return the number of valid entries in the cache. arlTableListPointer may be NULL_PTR in this case.		
Available via	Ethlf.h		

[SWS_EthIf_00197] [The function EthIf_GetArlTable shall return a list of structs with MAC-address, VLAN-ID and port for the indexed switch.]

[SWS_EthIf_00254] [The function EthIf_GetArlTable shall forward the call to function EthSwt_GetArlTable of the respective Ethernet Switch Driver.]

[SWS_EthIf_00198] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGetArlTable.|

8.4.1.9 Ethlf_SetPhcTime

[SWS_EthIf_91062] Definition of API function EthIf_SetPhcTime

Status: DRAFT

Upstream requirements: SRS_Eth_00175

Γ

Service Name	EthIf_SetPhcTime (draft)	Ethlf_SetPhcTime (draft)	
Syntax	Std_ReturnType EthIf_SetPhcTime (uint8 CtrlIdx, uint8 ClkUnitIdx, const TimeStampType* timeStampPtr)		
Service ID [hex]	0x96		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Ctrlldx	Index of Ethernet Controller within the context of the Ethernet Interface which owns the clock unit	
	ClkUnitldx	Index of the Clock Unit within the context of the Ethernet Interface to provide the time tuple	
	timeStampPtr	Time value to which the PHC shall be set	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: PHC successfully set E_NOT_OK: PHC could not be set	
Description	Sets the absolute time of the PHC.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

[SWS_EthIf_00609]

Status: DRAFT

Upstream requirements: SRS_BSW_00386

[If development error detection is enabled: the function shall check the parameter Clk UnitIdx for being valid. If the check fails, the function shall raise the development error ETHIF E INV CLKUNIT IDX.]

[SWS_EthIf_00610]

Status: DRAFT

Upstream requirements: SRS_BSW_00171

[The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfPhcSupport.|

[SWS Ethlf 00586]

Status: DRAFT

Upstream requirements: SRS_Eth_00175

The function EthIf_SetPhcTime shall forward the call to function <Eth-Drv>_SetPhcTime by setting the CtrlIdx to the Ethernet controller which is referenced via EthIfEthCtrlRef of the corresponding EthIfPhysController and ClkUnitIdx to Ethernet controller clock unit which is referenced via EthIfClkUnitRef of the given ClkUnitIdx.

[SWS Ethlf 00611]

Status: DRAFT

Upstream requirements: SRS_BSW_00459

[The EthIf module shall apply appropriate mechanisms to allow calls of EthIf_SetPhc Time API from other partitions than its main function, e.g. by providing an EthIf satellite.]

8.4.1.10 EthIf_SetPhcCorrection

[SWS_EthIf_91063] Definition of API function EthIf_SetPhcCorrection

Status: DRAFT

Upstream requirements: SRS_Eth_00175

Service Name	EthIf_SetPhcCorrection (EthIf_SetPhcCorrection (draft)	
Syntax	Std_ReturnType EthIf_SetPhcCorrection (uint8 CtrlIdx, uint8 ClkUnitIdx, sint32 rateDeviation, sint32 offset)		
Service ID [hex]	0x97	0x97	
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Ctrlldx	Index of Ethernet Controller within the context of the Ethernet Interface which owns the clock unit	
	ClkUnitldx	Index of the Clock Unit within the context of the Ethernet Interface to provide the time tuple	
	rateDeviation	Rate deviation (resolution: 2 ⁻⁴¹), by which the PHC is requested to be corrected	
	offset	Time offset, by which the PHC is requested to be updated.	
Parameters (inout)	None		
Parameters (out)	None		

Return value	Std_ReturnType	E_OK: PHC successfully set E_NOT_OK: PHC could not be set
Description	Sets PHC parameters to adapt rate and offset of the PHC.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

1

[SWS Ethlf 00622]

Status: DRAFT

Upstream requirements: SRS BSW 00386

[If development error detection is enabled: the function shall check the parameter Clk UnitIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_CLKUNIT_IDX.|

[SWS_EthIf_00623]

Status: DRAFT

Upstream requirements: SRS_BSW_00171

The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfPhcSupport.

[SWS_EthIf_00624]

Status: DRAFT

Upstream requirements: SRS Eth 00175

[The function EthIf_SetPhcCorrection shall forward the call to function <Eth-Drv>_SetPhcTime by setting the CtrlIdx to the Ethernet controller which is referenced via EthIfEthCtrlRef of the corresponding EthIfPhysController and ClkUnitIdx to Ethernet controller clock unit which is referenced via EthIfClkUnitRef of the given ClkUnitIdx.]

[SWS Ethlf 00625]

Status: DRAFT

Upstream requirements: SRS BSW 00459

[The EthIf module shall apply appropriate mechanisms to allow calls of EthIf_SetPhc Time API from other partitions than its main function, e.g. by providing an EthIf satellite.]

8.4.1.11 Ethlf_GetPhcTime

[SWS_EthIf_91064] Definition of API function EthIf_GetPhcTime

Status: DRAFT

Upstream requirements: SRS_Eth_00175

Γ

Service Name	EthIf_GetPhcTime (draft)	Ethlf_GetPhcTime (draft)	
Syntax	Std_ReturnType EthIf_GetPhcTime (uint8 CtrlIdx, uint8 ClkUnitIdx, TimeStampQualType timeQualPtr, TimeStampType timeStampPtr)		
Service ID [hex]	0x98		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of Ethernet Controller within the context of the Ethernet Interface which owns the clock unit	
	ClkUnitldx	Index of the Clock Unit within the context of the Ethernet Interface to provide the time tuple	
	timeQualPtr quality of HW time stamp, e.g. based on current drift		
	timeStampPtr current time stamp		
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: PHC value successfully retrieved E_NOT_OK: PHC value could not be retrieved	
Description	Returns the current time value out of the HW registers of the PHC		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

1

[SWS_EthIf_00627]

Status: DRAFT

Upstream requirements: SRS_BSW_00386

[If development error detection is enabled: the function shall check the parameter Clk UnitIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_CLKUNIT_IDX.|

[SWS Ethlf 00630]

Status: DRAFT

Upstream requirements: SRS_BSW_00171

[The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfPhcSupport.|

[SWS Ethlf 00631]

Status: DRAFT

Upstream requirements: SRS_Eth_00175

[The function EthIf_GetPhcTime shall forward the call to function <Eth-Drv>_GetPhcTime by setting the CtrlIdx to the Ethernet controller which is referenced via EthIfEthCtrlRef of the corresponding EthIfPhysController and ClkUnitIdx to Ethernet controller clock unit which is referenced via EthIfClkUnitRef of the given ClkUnitIdx.|

[SWS Ethlf 00632]

Status: DRAFT

Upstream requirements: SRS_BSW_00459

[The EthIf module shall apply appropriate mechanisms to allow calls of EthIf_GetPhc Time API from other partitions than its main function, e.g. by providing an EthIf satellite.]

8.4.1.12 Ethlf SetPpsSignalMode

[SWS_EthIf_91065] Definition of API function EthIf_SetPpsSignalMode

Status: DRAFT

Upstream requirements: SRS_Eth_00176

Service Name	EthIf_SetPpsSignalMode (d	raft)
Syntax	<pre>Std_ReturnType EthIf_SetPpsSignalMode (uint8 CtrlIdx, uint8 ClkUnitIdx, boolean signalMode)</pre>	
Service ID [hex]	0x99	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Ctrlldx	Index of Ethernet Controller within the context of the Ethernet Interface which owns the clock unit
	ClkUnitldx	Index of the Clock Unit within the context of the Ethernet Interface to provide the time tuple
	signalMode TRUE: PPS signal generation is enabled FALSE: PPS signal generation is disabled	
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: PPS signal generation successfully enabled/disabled E_NOT_OK: Failed to enable/disable PPS signal generation

Description	Enables/disables the generation of a PPS signal
	Tags: atp.Status=draft
Available via	Ethlf.h

[SWS_EthIf_00635]

Status: DRAFT

Upstream requirements: SRS_BSW_00171

The function shall be pre compile time configurable On/Off by the configuration pa-

rameter: EthIfPhcSupport.

[SWS_EthIf_00636]

Status: DRAFT

Upstream requirements: SRS_Eth_00175

[The function EthIf_SetPpsSignalMode shall forward the call to function <Eth-Drv>_SetPpsSignalMode by setting the CtrlIdx to the Ethernet controller which is referenced via EthIfEthCtrlRef of the corresponding EthIfPhysController and ClkUnitIdx to Ethernet controller clock unit which is referenced via EthIf-ClkUnitRef of the given ClkUnitIdx.]

8.4.1.13 Ethlf_Transmit

[SWS_EthIf_00075] Definition of API function EthIf_Transmit [

Service Name	Ethlf_Transmit	
Syntax	Std_ReturnType EthIf_Transmit (PduIdType TxPduId, const PduInfoType* PduInfoPtr)	
Service ID [hex]	0x1d	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Pdulds. Non reentrant for the same Pduld.	
Parameters (in)	TxPduld	Identifier of the PDU to be transmitted
	PduInfoPtr	Length of and pointer to the PDU data and pointer to MetaData.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Transmit request has been accepted. E_NOT_OK: Transmit request has not been accepted.
Description	Requests transmission of a PDU.	
Available via	Ethlf.h	

[SWS_EthIf_00250] [If CtrlIdx refers to an EthIfCtrl where an EthIfVlanID is configured, the parameters FrameType is not used, and 0x8100 is provided to <EthDrv> _Transmit instead. |

[SWS_EthIf_00076] [If the latest accepted controller mode is equal to ETH_MODE_ACTIVE or ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST for the given EthIfController, then the function EthIf_Transmit shall forward the call to the respective Ethernet Controller Driver. Otherwise the function shall reject the request for a transmission and return with E_NOT_OK.]

8.4.1.14 Ethlf_GetSwitchPortMode

[SWS Ethlf 91107] Definition of API function Ethlf GetSwitchPortMode

Service Name	EthIf_GetSwitchPortMode		
Syntax	Std_ReturnType EthIf_GetSwitchPortMode (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_ModeType* PortModePtr)		
Service ID [hex]	0x49		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	PortModePtr	ETH_MODE_DOWN: The Ethernet switch port of the given Ethernet switch is disabled ETH_MODE_ACTIVE: The Ethernet switch port of the given Ethernet switch is enabled	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: The mode of the indexed switch port could not be obtained, or the function is called in state ETHSWT_STATE_UNINIT or ETHSWT_STATE_INIT.	
Description	Obtains the mode of the indexed switch port		
Available via	Ethlf.h		

١

[SWS_EthIf_00415] [The function EthIf_GetSwitchPortMode shall forward the call to function EthSwt_GetSwitchPortMode of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.1.15 Ethlf_EthGetSpiStatus

[SWS_EthIf_91022] Definition of API function EthIf_EthGetSpiStatus

Status: DRAFT

Γ

Service Name	Ethlf_EthGetSpiStatus (dra	EthIf_EthGetSpiStatus (draft)	
Syntax	uint8* CtrlIdx,	Std_ReturnType EthIf_EthGetSpiStatus (uint8* CtrlIdx, Eth_SpiStatusType* SpiStatusPtr)	
Service ID [hex]	0x6a		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet controller Driver	
Parameters (inout)	None	None	
Parameters (out)	SpiStatusPtr	Status of the SPI interface	
Return value	Std_ReturnType	E_OK: success. E_NOT_OK: Controller request has not been accepted.	
Description	When MACPHY controller are used, obtains the SPI interface status.		
	Tags: atp.Status=draft	Tags: atp.Status=draft	
Available via	Ethlf.h		

1

[SWS Ethlf 00505]

Status: DRAFT

[The function EthIf_EthGetSpiStatus shall forward the call to function Eth_-GetSpiStatus of the corresponding Ethernet Driver (CtrlIdx).]

8.4.2 Firewall

8.4.2.1 Ethlf_GetStreamStatistics

[SWS_EthIf_91027] Definition of API function EthIf_GetStreamStatistics

Status: DRAFT

Upstream requirements: FO_RS_Fw_00011

Γ

Service Name	EthIf_GetStreamStatistics (draft)	
Syntax	<pre>void EthIf_GetStreamStatistics (uint8 SwitchIdx)</pre>	
Service ID [hex]	0x91	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Driver	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Requests the statistics (bucket counter values) of an Ethernet switch of all configured streams.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.2.2 Ethlf_SetStreamState

[SWS_EthIf_91025] Definition of API function EthIf_SetStreamState

Status: DRAFT

Upstream requirements: FO_RS_Fw_00011

Γ

Service Name	Ethlf_SetStreamState (draft)	
Syntax	<pre>void EthIf_SetStreamState (uint8 SwitchIdx, uint8 StreamHandleIdxPtr, boolean StreamActivityStatus)</pre>	
Service ID [hex]	0x92	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver
	StreamHandleldxPtr	Pointer to the StreamHandleldx for which the status shall be set

	StreamActivityStatus	Activity status of the StreamHandleIdx (True = active, False = inactive) to be set
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	This function is called by the Firewall module to control the activity status of a stream in the Ethernet switch. Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.3 General

8.4.3.1 Ethlf Init

[SWS_EthIf_00024] Definition of API function EthIf_Init [

Service Name	Ethlf_Init		
Syntax	void EthIf_Init (const EthIf Config	void EthIf_Init (const EthIf_ConfigType* CfqPtr	
Service ID [hex]	0x01		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	CfgPtr Points to the implementation specific structure		
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Initializes the Ethernet Inter	Initializes the Ethernet Interface	
Available via	Ethlf.h		

١

 $\cite{The function shall store}$ the access to the configuration structure for subsequent API calls.]

[SWS_EthIf_00114] [The function shall change the state of the component from uninitialized to initialized.]

[SWS_EthIf_00116] [If development error detection is enabled: the function shall check the parameter CfgPtr for containing a valid configuration. If the check fails, the function shall raise the development error ETHIF_E_INIT_FAILED.|

8.4.3.2 Ethlf_GetCtrlldxList

[SWS_EthIf_91053] Definition of API function EthIf_GetCtrlldxList [

Service Name	EthIf_GetCtrlIdxList	Ethlf_GetCtrlldxList	
Syntax	<pre>Std_ReturnType EthIf_GetCtrlIdxList (uint8* NumberOfCtrlIdx, uint8* CtrlIdxListPtr)</pre>		
Service ID [hex]	0x44		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
Parameters (in)	None		
Parameters (inout)	NumberOfCtrlIdx in: maximum number of controllers in CtrlIdxListPtr, 0 to return the number of controllers but without filling CtrlIdxListPtr. out: number of active controllers.		
Parameters (out)	CtrlldxListPtr List of active controller indexes		
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failure	
Description	Returns the number and index of all active Ethernet controllers.		
Available via	Ethlf.h		

[SWS_EthIf_00298] [The optional $EthIf_GetCtrlIdxList$ API shall return only the NumberOfCtrlIdx which are active.]

8.4.3.3 Ethlf_GetVlanId

[SWS_EthIf_91052] Definition of API function EthIf_GetVlanId [

Service Name	EthIf_GetVlanId	
Syntax	<pre>Std_ReturnType EthIf_GetVlanId (uint8 CtrlIdx, uint16* VlanIdPtr)</pre>	
Service ID [hex]	0x43	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Ethernet Interface	
Parameters (inout)	None	
Parameters (out)	VlanldPtr	Pointer to store the VLAN identifier (VID) of the Ethernet controller. 0 if the the Ethernet controller represents no virtual network (VLAN).

	۸.
/	\

Return value	Std_ReturnType	E_OK: success E_NOT_OK: failure
Description	Returns the VLAN identifier of the requested Ethernet controller.	
Available via	Ethlf.h	

[SWS_EthIf_00301] [The optional $EthIf_GetVlanId$ API shall return the VlanId of the requested CtrlIdx.]

8.4.3.4 Ethlf GetAndResetMeasurementData

[SWS_EthIf_91011] Definition of API function EthIf_GetAndResetMeasurement Data \lceil

Service Name	Ethlf_GetAndResetMeasur	EthIf_GetAndResetMeasurementData	
Syntax	Std_ReturnType EthIf_GetAndResetMeasurementData (EthIf_MeasurementIdxType MeasurementIdx, boolean MeasurementResetNeeded, uint32* MeasurementDataPtr)		
Service ID [hex]	0x45		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant		
Parameters (in)	Measurementldx	Data index of measurement data	
	MeasurementReset Needed	Flag to trigger a reset of the measurement data	
Parameters (inout)	None		
Parameters (out)	MeasurementDataPtr	Reference to data buffer, where to copy measurement data	
Return value	Std_ReturnType	E_OK: successful E_NOT_OK: failed	
Description	Allows to read and reset detailed measurement data for diagnostic purposes. Get all MeasurementIdx's at once is not supported. ETHIF_MEAS_ALL shall only be used to reset all MeasurementIdx's at once. A NULL_PTR shall be provided for MeasurementDataPtr in this case.		
Available via	Ethlf.h		

[SWS_EthIf_00308] [EthIf_GetAndResetMeasurementData shall return measurement data for selected measurement index.]

[SWS_EthIf_00309] [For measurement index ETHIF_MEAS_DROP_CRTLIDX the function shall return the number of all dropped datagrams, caused by invalid Crtlldx/VLAN. If the VLAN is not enabled, all received VLAN tagged datagrams are invalid and shall be counted also.]

[SWS_EthIf_00310] [The function shall return E_NOT_OK if the requested measurement index is not supported.]

[SWS_EthIf_00312] [The function shall reset all existing measurement data to 0, if MeasurementResetNeeded is true and measurement index is set to ETHIF MEAS ALL.]

[SWS_EthIf_00313] [All measurement data which counts data shall not overrun.]

[SWS_EthIf_00314] [The function shall accept NULL_PTR. In this case the measurement data shall not be copied.]

[SWS_EthIf_00316] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGetAndResetMeasurementDataApi.]

[SWS_EthIf_00317] [If the VLAN is not active the Ethernet Interface shall increment the corresponding measurement data and filter the message.]

[SWS_EthIf_00319] [If development error detection is enabled: The function shall check that the service <code>EthIf_Init</code> was previously called. If the check fails, the function shall raise the development error <code>ETHIF_E_UNINIT.|</code>

8.4.3.5 Ethlf_VerifyConfig

[SWS_EthIf_91012] Definition of API function EthIf_VerifyConfig [

Service Name	EthIf_VerifyConfig	
Syntax	<pre>Std_ReturnType EthIf_VerifyConfig (uint8 SwitchIdx, boolean* Result)</pre>	
Service ID [hex]	0x40	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Interface	
Parameters (inout)	None	
Parameters (out)	Result	Result of verification, TRUE: configureation verified ok, FALSE: configuration values found corrupted
Return value	Std_ReturnType	E_OK: Configuration verification succeeded, E_NOT_OK: Configuration verification not succeeded.
Description	Forwarded to EthSwt_VerifyConfig. EthSwt_VerifyConfig verifies the Switch Configuration depending on the HW-Architecture, HW-capability and the intended accuracy of this verification.	

Available via Ethlf.h	
-----------------------	--

[SWS_EthIf_00305] [The function shall be compile time configurable On/Off by the configuration parameter: EthIfVerifyConfigApi.]

8.4.3.6 Ethlf_SetForwardingMode

[SWS_EthIf_91013] Definition of API function EthIf_SetForwardingMode [

Service Name	Ethlf_SetForwardingMode	
Syntax	Std_ReturnType EthIf_SetForwardingMode (uint8 SwitchIdx, boolean mode)	
Service ID [hex]	0x41	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Driver	
	mode	True Forwarding enabled, False Forwarding disabled
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: stopping of frame forwarding succeeded, E_NOT_OK: stopping of frame forwarding not succeeded.
Description	Verifies the Switch Configuration. If Configuration is not valid, Switch is reconfigured.	
Available via	Ethlf.h	

[SWS_EthIf_00307] [The function shall be compile time configurable On/Off by the configuration parameter: EthIfSetForwardingModeApi.

8.4.3.7 Ethlf_ClearTrcvSignalQuality

[SWS_EthIf_91059] Definition of API function EthIf_ClearTrcvSignalQuality [

Service Name	EthIf_ClearTrcvSignalQuality	
Syntax	Std_ReturnType EthIf_ClearTrcvSignalQuality (uint8 TrcvIdx)	
Service ID [hex]	0x19	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The signal quality cleared successfully E_NOT_OK: The signal quality cleared not successfully
Description	Clear the stored signal quality of the link of the given Ethernet transceiver	
Available via	Ethlf.h	

[SWS_EthIf_00400] [The function EthIf_ClearTrcvSignalQuality shall clear the stored signal quality values (see EthIf_SignalQualityResultType) of the EthIfTransceiver given by TrcvIdx.

8.4.3.8 Ethlf_ClearSwitchPortSignalQuality

[SWS_EthIf_91060] Definition of API function EthIf_ClearSwitchPortSignalQuality \lceil

Service Name	EthIf_ClearSwitchPortSignalQuality	
Syntax	<pre>Std_ReturnType EthIf_ClearSwitchPortSignalQuality (uint8 SwitchIdx, uint8 SwitchPortIdx)</pre>	
Service ID [hex]	0x1b	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Ethernet switch indexes and Ethernet Switch port indexes. Non reentrant for the same SwitchPortIdx.	
Parameters (in)	Switchldx Index of the Ethernet switch within the context of the Ethernet Interface	
	SwitchPortldx	Index of the Ethernet switch port within the context of the Ethernet Interface
Parameters (inout)	None	
Parameters (out)	None	

Return value	Std_ReturnType	E_OK: The signal quality cleared successfully E_NOT_OK: The signal quality cleared not successfully
Description	Clear the stored signal quality of the link of the given Ethernet switch port	
Available via	Ethlf.h	

1

[SWS_EthIf_00404] [The function EthIf_ClearSwitchPortSignalQuality shall clear the stored signal quality values (see EthIf_SignalQualityResult_Type) of the EthSwtPort given by SwitchIdx and SwitchPortIdx.

8.4.3.9 Ethlf_ReleaseRxBuffer

[SWS_EthIf_91138] Definition of API function EthIf_ReleaseRxBuffer

Status: DRAFT

Upstream requirements: SRS_Eth_00169

Service Name	EthIf_ReleaseRxBuffer (draft)	
Syntax	void EthIf_ReleaseRxBuffer (PduIdType RxPduId)	
Service ID [hex]	0x9b	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Pdulds. Non reentrant for the same Pduld	
Parameters (in)	RxPduld Identifier of the received PDU.	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Indication from the upper layer to release the lower layer reception buffer.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.3.10 Ethlf_GetVersionInfo

[SWS_EthIf_00082] Definition of API function EthIf_GetVersionInfo

Service Name	EthIf_GetVersionInfo		
Syntax	<pre>void EthIf_GetVersionInfo (Std_VersionInfoType* VersionInfoPtr)</pre>		
Service ID [hex]	0x0b		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant		
Parameters (in)	None		
Parameters (inout)	None	None	
Parameters (out)	VersionInfoPtr Version information of this module		
Return value	None		
Description	Returns the version information of this module		
Available via	Ethlf.h		

8.4.4 MacSec

8.4.4.1 Ethlf_SwitchMacSecUpdateSecY

[SWS_EthIf_91219] Definition of API function EthIf_SwitchMacSecUpdateSecY

Status: DRAFT

Service Name	EthIf_SwitchMacSecUpdateSecY (draft)	
Syntax	Std_ReturnType EthIf_SwitchMacSecUpdateSecY (const EthSwt_MgmtInfoType* MgmtInfoPtr, const Mka_MacSecConfigType* MACSecCfgPtr, uint64 TxSci)	
Service ID [hex]	0x6d	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr Pointer to the management information within the context of an Ethernet Switch Driver. Switchldx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	MACsecCfgPtr Pointer to the structure to configure a MACsec Entity (SecY) TxSci Secure Channel Identifier for the MACsec's Transmission Secure channel	
Parameters (inout)	None	

Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Requests the Ethernet Switch to update the SecY/PAC of the the provided port with the provided parameters. A Transmission Secure Channel with the provided SCI shall be configured during the first call. A pointer to a MACsec Basic Parameters Configuration file shall be provided to create the Secure Channel.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.4.2 Ethlf_MacSecUpdateSecY

[SWS_EthIf_91215] Definition of API function EthIf_MacSecUpdateSecY

Status: DRAFT

ſ

Service Name	Ethlf_MacSecUpdateSecY (draft)		
Syntax	Std_ReturnType EthIf_MacSecUpdateSecY (uint8 CtrlIdx, const Mka_MacSecConfigType* MACsecCfgPtr, uint64 TxSci)		
Service ID [hex]	0x88		
Sync/Async	Asynchronous		
Reentrancy	Reentrant for different Ctrllo	lx, Non reentrant for the same Ctrlldx	
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Ethern Interface		
	MACsecCfgPtr	Pointer to the structure to configure a MACsec Entity (SecY)	
	TxSci	Secure Channel Identifier for the MACsec's Transmission Secure channel	
Parameters (inout)	None	None	
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Requests the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver to update the SecY/PAC of the PHY with the provided parameters. A Transmission Secure Channel with the provided SCI shall be configured during the first call. A pointer to a MACsec Basic Parameters Configuration file shall be provided to create the Secure Channel. Tags: atp.Status=draft		
Available via	Ethlf.h		

Ī

8.4.4.3 Ethlf_SwitchMacSecUpdateSecYNotification

[SWS_EthIf_91217] Definition of callback function EthIf_SwitchMacSecUpdate SecYNotification

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecUpdate	EthIf_SwitchMacSecUpdateSecYNotification (draft)	
Syntax	<pre>void EthIf_SwitchMacSecUpdateSecYNotification (const EthSwt_MgmtInfoType* MgmtInfoPtr, Std_ReturnType Result)</pre>		
Service ID [hex]	0x6b		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different Mgm	tInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
upd: Sec E_N		E_OK: EthSwt_MacSecUpdateSecY has finished and SecY is updated with the provided parameters of EthSwt_MacSecUpdate SecY E_NOT_OK: SecY has not been updated with the provided parameters of EthSwt_MacSecUpdateSecY.	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	None		
Description	Callback to notify that EthSwt_MacSecUpdateSecY has finished.		
	Tags: atp.Status=draft		
Available via	Ethlf.h	Ethlf.h	

8.4.4.4 Ethlf_MacSecUpdateSecYNotification

[SWS_EthIf_91218] Definition of callback function EthIf_MacSecUpdateSecYNotification

Status: DRAFT

Γ

Service Name	EthIf_MacSecUpdateSecYNotification (draft)	
Syntax	<pre>void EthIf_MacSecUpdateSecYNotification (uint8 CtrlIdx, Std_ReturnType Result)</pre>	

Service ID [hex]	0x6c		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different Ctrllo	dx, Non reentrant for the same Ctrlldx	
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Ethernet Interface		
	Result	E_OK: EthTrcv_MacSecUpdateSecY has finished and SecY is updated with the provided parameters of EthTrcv_MacSecUpdate SecY E_NOT_OK: SecY has not been updated with the provided parameters of EthTrcv_MacSecUpdateSecY.	
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Callback to notify that EthTrcv_MacSecUpdateSecY finished.		
	Tags: atp.Status=draft		
Available via	Ethlf.h	Ethlf.h	

_

8.4.4.5 Ethlf_SwitchMacSecInitRxSc

[SWS_EthIf_91220] Definition of API function EthIf_SwitchMacSecInitRxSc

Status: DRAFT

Service Name	EthIf_SwitchMacSecInitRxSc (draft)		
Syntax	Std_ReturnType EthIf_SwitchMacSecInitRxSc (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint64 Sci)		
Service ID [hex]	0x6e		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different Mgm	tInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	Sci	Secure Channel Identifier for the MACsec's Reception Secure channel	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType E_OK: The request has been accepted E_NOT_OK: The request has not been accepted		
Description	Requests the Ethernet Switch Driver to configure a Reception Secure Channel for the given Secure Channel Identifier.		
	Tags: atp.Status=draft		

Available via	Ethlf.h
---------------	---------

8.4.4.6 Ethlf_MacSecInitRxSc

[SWS_EthIf_91211] Definition of API function EthIf_MacSecInitRxSc

Status: DRAFT

ſ

Service Name	Ethlf_MacSecInitRxSc (draf	Ethlf_MacSecInitRxSc (draft)	
Syntax	<pre>Std_ReturnType EthIf_MacSecInitRxSc (uint8 CtrlIdx, uint64 Sci)</pre>		
Service ID [hex]	0x87		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	Sci	Secure Channel Identifier for the MACsec's Reception Secure channel	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Requests the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to configure a Reception Secure Channel for the given Secure Channel Identifier.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.7 Ethlf SwitchMacSecResetRxSc

[SWS_EthIf_91221] Definition of API function EthIf_SwitchMacSecResetRxSc

Status: DRAFT

Γ

Service Name	Ethlf_SwitchMacSecResetRxSc (draft)		
Syntax	Std_ReturnType EthIf_SwitchMacSecResetRxSc (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint64 Sci)		
Service ID [hex]	0x6f		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr		
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	Sci	Secure Channel Identifier for the MACsec's Reception Secure channel	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Requests the Ethernet Switch Driver to reset to default the MACsec values of the Reception Secure Channel for the given Secure Channel Identifier.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.8 Ethlf_MacSecResetRxSc

[SWS_EthIf_91213] Definition of API function EthIf_MacSecResetRxSc

Status: DRAFT

Γ

Service Name	Ethlf_MacSecResetRxSc (draft)	
Syntax	<pre>Std_ReturnType EthIf_MacSecResetRxSc (uint8 CtrlIdx, uint64 Sci)</pre>	
Service ID [hex]	0x86	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx	

/	١.
/	\

Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
	Sci	Secure Channel Identifier for the MACsec's Reception Secure channel
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description		face (MACsec per SW) or the Ethernet Transceiver Driver to reset es of the Reception Secure Channel for the given Secure Channel
	Tags: atp.Status=draft	
Available via	Ethlf.h	

١

8.4.4.9 EthIf_SwitchMacSecAddTxSa

[SWS_EthIf_91222] Definition of API function EthIf_SwitchMacSecAddTxSa

Status: DRAFT

Service Name	EthIf_SwitchMacSecAddTx	Sa (draft)
Syntax	<pre>Std_ReturnType EthIf_SwitchMacSecAddTxSa (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint8 An, uint64 NextPn, uint32 Ssci, const Mka_SakKeyPtrType* KeysPtr, boolean Active)</pre>	
Service ID [hex]	0x70	
Sync/Async	Asynchronous	
Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).
	An	Association Number to use in the MACsec's transmission secure association
	NextPn	Next accepted Packet Number in the MACsec's transmission secure association
	Ssci	Short Secure Channel Identifiert used in the MACsec's transmission secure association
	KeysPtr	Pointer to the SAKs Key (and needed Key information) to use in the MACsec's transmission secure association
	Active	Boolean to enable/disable the MACsec's transmission secure association
Parameters (inout)	None	

Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Requests the Ethernet Switch Driver to create a Transmission Secure Association in the provided port. The Short Secure Channel Identifier is included to support XPN configurations. Tags: atp.Status=draft	
	rags. atp.otatus=drait	
Available via	Ethlf.h

8.4.4.10 Ethlf_MacSecAddTxSa

[SWS_EthIf_91206] Definition of API function EthIf_MacSecAddTxSa

Status: DRAFT

Service Name	Ethlf_MacSecAddTxSa (draft)		
Syntax	<pre>Std_ReturnType EthIf_MacSecAddTxSa (uint8 CtrlIdx, uint8 An, uint64 NextPn, uint32 Ssci, const Mka_SakKeyPtrType* KeysPtr, boolean Active)</pre>		
Service ID [hex]	0x85	0x85	
Sync/Async	Asynchronous		
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	An	Association Number to use in the MACsec's transmission secure association	
	NextPn	Next accepted Packet Number in the MACsec's transmission secure association	
	Ssci	Short Secure Channel Identifiert used in the MACsec's transmission secure association	
	KeysPtr	Pointer to the SAKs Key (and needed Key information) to use in the MACsec's transmission secure association	
	Active	Boolean to enable/disable the MACsec's transmission secure association	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	

Description	Requests the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to create a Transmission Secure Association in the Transceiver. The Short Secure Channel Identifier is included to support XPN configurations. Tags: atp.Status=draft
Available via	Ethlf.h

8.4.4.11 Ethlf_SwitchMacSecAddTxSaNotification

[SWS_EthIf_91223] Definition of callback function EthIf_SwitchMacSecAddTxSa Notification

Status: DRAFT

Service Name	EthIf_SwitchMacSecAddTxSaNotification (draft)		
Syntax	<pre>void EthIf_SwitchMacSecAddTxSaNotification (const EthSwt_MgmtInfoType* MgmtInfoPtr, Std_ReturnType Result)</pre>		
Service ID [hex]	0x71		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr		
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. Switchldx in context of the Ethlf (Ethlf Switch/EthlfSwitchldx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	Result	E_OK: EthSwt_MacSecAddTxSa has finished and Transmission Secure Association is created E_NOT_OK: The Transmission Secure Association is not created through EthSwt_MacSecAddTxSa.	
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Callback to notify that EthSwt_MacSecAddTxSa has finished.		
	Tags: atp.Status=draft		
Available via	Ethlf.h

Service ID [hex]	0x72		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	Result	E_OK: EthTrcv_MacSecAddTxSa has finished and Transmission Secure Association is created E_NOT_OK: The Transmission Secure Association is not created through EthTrcv_MacSecAddTxSa.	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	None		
Description	Callback to notify that EthTrcv_MacSecAddTxSa has finished.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.13 Ethlf_SwitchMacSecUpdateTxSa

[SWS_EthIf_91225] Definition of API function EthIf_SwitchMacSecUpdateTxSa

Status: DRAFT

Service Name	EthIf_SwitchMacSecUpdateTxSa (draft)	
Syntax	<pre>Std_ReturnType EthIf_SwitchMacSecUpdateTxSa (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint8 An, uint64 NextPn, boolean Active)</pre>	
Service ID [hex]	0x73	
Sync/Async	Synchronous	

Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).
	An	Association Number to use in the MACsec's transmission secure association
	NextPn	Next accepted Packet Number in the MACsec's transmission secure association
	Active	Boolean to enable/disable the MACsec's transmission secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Requests the Ethernet Switch Driver to update the Transmission Secure Association with the given Packet Number. The Active parameter is included to change the specified AN status.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

J

8.4.4.14 Ethlf_MacSecUpdateTxSa

[SWS_EthIf_91216] Definition of API function EthIf_MacSecUpdateTxSa

Status: DRAFT

Service Name	Ethlf_MacSecUpdateTxSa	EthIf_MacSecUpdateTxSa (draft)	
Syntax	Std_ReturnType EthIf_MacSecUpdateTxSa (uint8 CtrlIdx, uint8 An, uint64 NextPn, boolean Active)		
Service ID [hex]	0x84		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Et Interface		
	An Association Number to use in the MACsec's transmission secure association		
	NextPn Next accepted Packet Number in the MACsec's transmission secure association		
	Active	Boolean to enable/disable the MACsec's transmission secure association	
Parameters (inout)	None		

Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Requests the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to update the Transmission Secure Association with the given Packet Number. The Active parameter is included to change the specified AN status.	
	Tags: atp.Status=draft	
Available via	Ethlf.h

8.4.4.15 Ethlf_SwitchMacSecDeleteTxSa

[SWS_EthIf_91226] Definition of API function EthIf_SwitchMacSecDeleteTxSa

Status: DRAFT

Service Name	EthIf_SwitchMacSecDeleteTxSa (draft)	
Syntax	Std_ReturnType EthIf_SwitchMacSecDeleteTxSa (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint8 An)	
Service ID [hex]	0x74	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Mgm	tInfoPtr, Non reentrant for the same MgmtInfoPtr
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).
	An	Association Number to use in the MACsec's transmission secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	${\tt E_OK:}$ The request has been accepted ${\tt E_NOT_OK:}$ The request has not been accepted
Description	Request the Ethernet Switch Driver to remove the Transmission Secure Association identified by the provided Association Number.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.4.16 Ethlf_MacSecDeleteTxSa

[SWS_EthIf_91208] Definition of API function EthIf_MacSecDeleteTxSa

Status: DRAFT

Γ

Service Name	Ethlf_MacSecDeleteTxSa (draft)
Syntax	Std_ReturnType EthIf_MacSecDeleteTxSa (uint8 CtrlIdx, uint8 An)	
Service ID [hex]	0x16	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Ctrllo	dx, Non reentrant for the same Ctrlldx
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
	An	Association Number to use in the MACsec's transmission secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Request the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to remove the Transmission Secure Association identified by the provided Association Number.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.4.17 Ethlf_SwitchMacSecAddRxSa

[SWS_EthIf_91227] Definition of API function EthIf_SwitchMacSecAddRxSa

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecAddRxSa (draft)	
Syntax	Std_ReturnType EthIf_SwitchMacSecAddRxSa (const EthSwt_MgmtInfoType* MgmtInfoPtr, uint8 An, uint64 LowestPn, uint32 Ssci, const Mka_SakKeyPtrType* KeysPtr, boolean Active)	
Service ID [hex]	0x75	
Sync/Async	Asynchronous	

Reentrancy	Reentrant for different Mgm	tInfoPtr, Non reentrant for the same MgmtInfoPtr
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. Switchldx in context of the Ethlf (Ethlf Switch/EthlfSwitchldx), Portldx in context of EthSwt (EthSwtPort/EthSwtPortldx).
	An	Association Number to use in the MACsec's reception secure association
	LowestPn	Lowest accepted Packet Number in the MACsec's reception secure association
	Ssci	Short Secure Channel Identifiert used in the MACsec's reception secure association
	KeysPtr	Pointer to the SAKs Key (and needed Key information) to use in the MACsec's reception secure association
	Active	Boolean to enable/disable the MACsec's reception secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Request the Ethernet Switch Driver to create a Reception Secure Association in the provided Port. The Short Secure Channel Identifier is included to support XPN configurations.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

J

8.4.4.18 Ethlf_MacSecAddRxSa

[SWS_EthIf_91205] Definition of API function EthIf_MacSecAddRxSa

Status: DRAFT

Service Name	Ethlf_MacSecAddRxSa (dra	Ethlf_MacSecAddRxSa (draft)	
Syntax	uint8 CtrlIdx, uint8 An, uint64 LowestPn, uint32 Ssci,	uint8 An, uint64 LowestPn, uint32 Ssci, const Mka_SakKeyPtrType* KeysPtr,	
Service ID [hex]	0x83		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Reentrant for different Ctrllo	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx	
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	An	Association Number to use in the MACsec's reception secure association	

	LowestPn	Lowest accepted Packet Number in the MACsec's reception secure association
	Ssci	Short Secure Channel Identifiert used in the MACsec's reception secure association
	KeysPtr	Pointer to the SAKs Key (and needed Key information) to use in the MACsec's reception secure association
	Active	Boolean to enable/disable the MACsec's reception secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Request the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to create a Reception Secure Association in the Transceiver. The Short Secure Channel Identifier is included to support XPN configurations.	
	Tags: atp.Status=draft

	^
/	\

Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
	An	Association Number to use in the MACsec's reception secure association
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	${\tt E_OK:}$ The request has been accepted ${\tt E_NOT_OK:}$ The request has not been accepted
Description	Request the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to remove the Reception Secure Association identified by the provided Association Number. Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.4.25 Ethlf_SwitchMacSecGetTxSaNextPn

[SWS_EthIf_91232] Definition of API function EthIf_SwitchMacSecGetTxSaNext Pn

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecGetTx	Ethlf_SwitchMacSecGetTxSaNextPn (draft)	
Syntax		· ·	
Service ID [hex]	0x7a		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Mgn	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	An	Association Number to use in the MACsec's reception secure association	
Parameters (inout)	None	None	
Parameters (out)	NextPnPtr	Pointer to the Next Packet Number read out from the MACsec Entity (SecY)	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Request the Ethernet Switch Driver to return the Packet Number that is used for the next packet in the given Transmission Secure Association.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.26 Ethlf_MacSecGetTxSaNextPn

[SWS_EthIf_91210] Definition of API function EthIf_MacSecGetTxSaNextPn

Status: DRAFT

Γ

Service Name	Ethlf_MacSecGetTxSaNext	Ethlf_MacSecGetTxSaNextPn (draft)	
Syntax	<pre>Std_ReturnType EthIf_MacSecGetTxSaNextPn (uint8 CtrlIdx, uint8 An, uint64* NextPnPtr)</pre>		
Service ID [hex]	0x90		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Ctrllo	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx	
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	An	Association Number to use in the MACsec's reception secure association	
Parameters (inout)	None		
Parameters (out)	NextPnPtr	NextPnPtr Pointer to the Next Packet Number read out from the MACsec Entity (SecY)	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Request the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to return the Packet Number that is used for the next packet in the given Transmission Secure Association.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.27 EthIf_SwitchMacSecGetMacSecStatistics

[SWS_EthIf_91233] Definition of API function EthIf_SwitchMacSecGetMacSec Statistics

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecGetMacSecStatistics (draft)	
Syntax	Std_ReturnType EthIf_SwitchMacSecGetMacSecStatistics (const EthSwt_MgmtInfoType* MgmtInfoPtr, Mka_Stats_SecYType* MacSecStatsPtr)	
Service ID [hex]	0x7b	
Sync/Async	Asynchronous	

Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).
Parameters (inout)	None	
Parameters (out)	MacSecStatsPtr	Pointer to a structure including the MACsec statistics of an MKA participant
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Request the Ethernet switch Driver to provide MACsec statistics. The result is returned through EthIf_SwitchMacSecGetMacSecStatisticsNotification	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

8.4.4.28 Ethlf_MacSecGetMacSecStatistics

[SWS_EthIf_91209] Definition of API function EthIf_MacSecGetMacSecStatistics

Status: DRAFT

Γ

Service Name	EthIf_MacSecGetMacSecStatistics (draft)		
Syntax	Std_ReturnType EthIf_MacSecGetMacSecStatistics (uint8 CtrlIdx, Mka_Stats_SecYType* MacSecStatsPtr)		
Service ID [hex]	0x89		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
Parameters (inout)	None		
Parameters (out)	MacSecStatsPtr	Pointer to a structure including the MACsec statistics of an MKA participant	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Request the Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver to provide MACsec statistics. The result is returned through EthIf_MacSecGetMacSecStatistics Notification Tags: atp.Status=draft		
Available via	Ethlf.h

8.4.4.29 Ethlf_SwitchMacSecOperational

[SWS_EthIf_91236] Definition of API function EthIf_SwitchMacSecOperational

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecOper	EthIf_SwitchMacSecOperational (draft)	
Syntax	const EthSwt_Mgmt	Std_ReturnType EthIf_SwitchMacSecOperational (const EthSwt_MgmtInfoType* MgmtInfoPtr, boolean MacSecOperational)	
Service ID [hex]	0x7e		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Mg	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).	
	MacSecOperational	Boolean to notify if MACsec is operational	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	To inform Ethlf that MacSec is operational and that EthSM can be notified. (Switch case)		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.30 Ethlf_MacSecOperational

[SWS_EthIf_91212] Definition of API function EthIf_MacSecOperational

Status: DRAFT

Γ

Service Name	Ethlf_MacSecOperational (draft)	
Syntax	<pre>Std_ReturnType EthIf_MacSecOperational (uint8 CtrlIdx, boolean MacSecOperational)</pre>	
Service ID [hex]	0x1c	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx	

Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface
	MacSecOperational	Boolean to notify if MACsec is operational
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	To inform EthIf that MacSec is operational and that EthSM can be informed. (Ethernet Inferface (MACsec per SW) or the Ethernet Transceiver Driver)	
	Tags: atp.Status=draft	
Available via	Ethlf.h

8.4.4.31 Ethlf_SwitchMacSecSetControlledPortEnabled

[SWS_EthIf_91237] Definition of API function EthIf_SwitchMacSecSetControlled PortEnabled

Status: DRAFT

Γ

Service Name	Ethlf_SwitchMacSecSetControlledPortEnabled (draft)		
Syntax	Std_ReturnType EthIf_SwitchMacSecSetControlledPortEnabled (const EthSwt_MgmtInfoType* MgmtInfoPtr, boolean ControlledPortEnabled)		
Service ID [hex]	0x7f		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Mgm	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr	
Parameters (in)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. Switchldx in context of the Ethlf (Ethlf Switch/EthlfSwitchldx), Portldx in context of EthSwt (EthSwtPort/EthSwtPortldx).	
	ControlledPortEnabled	Boolean to activate the Controlled Port of the PAE	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Requests to set the Controlled Port enabled parameter of a PAE.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.4.32 Ethlf MacSecSetControlledPortEnabled

[SWS_EthIf_91238] Definition of API function EthIf_MacSecSetControlledPortEnabled

Status: DRAFT

Γ

Service Name	EthIf_MacSecSetControllec	Ethlf_MacSecSetControlledPortEnabled (draft)	
Syntax	uint8 CtrlIdx,	Std_ReturnType EthIf_MacSecSetControlledPortEnabled (uint8 CtrlIdx, boolean ControlledPortEnabled)	
Service ID [hex]	0x80		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	ControlledPortEnabled	Boolean to activate the Controlled Port of the PAE	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Requests to set the Controlled Port enabled parameter of a PAE.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

8.4.5 Switch driver

8.4.5.1 Ethlf_GetSwitchPortWakeupReason

[SWS_EthIf_91005] Definition of API function EthIf_GetSwitchPortWakeupReason \lceil

Service Name	Ethlf_GetSwitchPortWakeupReason	
Syntax	<pre>Std_ReturnType EthIf_GetSwitchPortWakeupReason (uint8 SwitchIdx, uint8 SwitchPortIdx, EthTrcv_WakeupReasonType* WakeupReasonPtr)</pre>	
Service ID [hex]	0x67	
Sync/Async	Synchronous	
Reentrancy	Reentrant	

Parameters (in)	Switchldx	Index of the Ethernet switch within the context of the Ethernet Interface
	SwitchPortIdx	Index of the Ethernet switch port index in the context of the Ethernet switch driver
Parameters (inout)	None	
Parameters (out)	WakeupReasonPtr	Pointer to structure of least recent wakeup event, which was detected by the Ethernet switch port
Return value	Std_ReturnType	E_OK: Ethernet switch port wake up reason request has been accepted. E_NOT_OK: Ethernet switch port wake up reason request has not been accepted.
Description	This function obtains the wake up reasons of the indexed Ethernet switch port by calling Eth Swt_GetSwitchPortWakeupReason().	
Available via	Ethlf.h	

1

[SWS_EthIf_00490]

Upstream requirements: SRS_Eth_00107

[The function $Ethlf_GetSwitchPortWakeupReason$ shall forward the call to function $EthSwt_GetSwitchPortWakeupReason$ of the corresponding Ethernet Switch Driver (EthlfSwitchIdx).]

[SWS_EthIf_00134] [The function $EthIf_SetPhysAddr$ shall forward the call to the respective Ethernet Controller Driver.]

8.4.5.2 Ethlf_StoreConfiguration

[SWS_EthIf_00214] Definition of API function EthIf_StoreConfiguration [

Service Name	EthIf_StoreConfiguration		
Syntax	<pre>Std_ReturnType EthIf_StoreConfiguration (uint8 SwitchIdx)</pre>		
Service ID [hex]	0x2c	0x2c	
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: Storage/Reset request accepted E_NOT_OK: Storage/Reset request not accepted	
Description	Trigger the storage/reset of the configuration of the learned MAC/Port tables of a switch in a persistent manner and will be used by e.g. CDD.		

Available via	Ethlf.h
---------------	---------

[SWS_EthIf_00215] [The function EthIf_StoreConfiguration shall trigger to store the learned MAC/Port tables of a Ethernet switch.]

[SWS_EthIf_00216] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfStoreConfigurationApi.|

8.4.5.3 Ethlf_ResetConfiguration

[SWS_EthIf_00219] Definition of API function EthIf_ResetConfiguration [

Service Name	EthIf_ResetConfiguration	EthIf_ResetConfiguration	
Syntax	Std_ReturnType EthIf_ResetConfiguration (uint8 SwitchIdx)		
Service ID [hex]	0x2d		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: Request to persistently reset the MAC/Port table was accepted E_NOT_OK: Request to persistently reset the MAC/Port table was not accepted	
Description	The function shall request to reset the configuration of the learned MAC/Port tables of a Ethernet switch in a persistent manner. This could be used by e.g. a CDD. The statically configured entries shall still remain.		
Available via	Ethlf.h		

1

[SWS_EthIf_00220] [The function $EthIf_ResetConfiguration$ shall trigger to reset the learned MAC/Port tables of a Ethernet switch.]

[SWS_EthIf_00221] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfResetConfigurationApi.]

8.4.5.4 Ethlf_SwitchPortGroupRequestMode

[SWS_EthIf_91102] Definition of API function EthIf_SwitchPortGroupRequest Mode [

Service Name	Ethlf_SwitchPortGroupRequ	Ethlf_SwitchPortGroupRequestMode	
Syntax	<pre>Std_ReturnType EthIf_SwitchPortGroupRequestMode (EthIf_SwitchPortGroupIdxType PortGroupIdx, Eth_ModeType PortMode)</pre>		
Service ID [hex]	0x06		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
Parameters (in)	PortGroupIdx Index of the port group within the context of the Ethernet Interface		
	PortMode	ETH_MODE_DOWN: disable the Ethernet switch port group	
		ETH_MODE_ACTIVE: enable the Ethernet switch port group	
		ETH_MODE_ACTIVE_WITH_WAKEUP_REQUEST: enable the port group and request for a wake-up on the network	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: success E_NOT_OK: port group mode could not be changed	
Description	Request a mode for the EthIfSwtPortGroup. The call shall be forwarded to EthSwt by calling EthSwt_SetSwitchPortMode for all EthSwtPorts referenced by the port group.		
Available via	Ethlf.h		

[SWS_EthIf_00270] [If EthIf_SwitchPortGroupRequestMode is called with ETH_MODE_DOWN EthIf shall start a timer with EthIfSwitchOffPortTimedelay for all ports of the respective EthIf_SwitchPortGroup if the mode ETH_MODE_DOWN has been requested for all EthIfSwitchPortGroups referencing the port and the current mode is ETH_MODE_ACTIVE.|

[SWS_EthIf_00271] [If the timer to switch off ports (see [SWS_EthIf_00270]) elapses for a port, EthIf shall call the following functions in the given order for the corresponding EthSwtPort:

- 1. EthSwt_PortLinkStateRequest with ETHTRCV_LINK_STATE_DOWN
- 2. EthSwt_SetSwitchPortMode with ETH_MODE_DOWN

Note: The implementation has to ensure that EthSwtPorts within EthIfSwitchPort-Groups are only disabled if all prior activation request have been withdrawn. This could be realized e.g. by a counter mechanism.

Rationale: Delaying to switch off EthSwtPorts by EthIfSwitchOffPortTimedelay is needed to ensure a simultaneous switch-off of the Ethernet switch port and the Ethernet hardware (PHY or another Ethernet switch) of the connected communication partner:

- If the Ethernet hardware of the connected communication partner is an PHY, then the EthIfSwitchOffPortTimedelay cover the time which is needed until the PHY of the connected communication partner will be switched off, due to the NM handling.
- 2. If the Ethernet hardware of the connected communication partner is an Ethernet switch, then both EthSwtPorts should be switched off in the same point in time to avoid link down recognition.

Rationale: Avoid that a EthlfSwitchPortGroup which shall be controlled by EthlfController is incidentally called by BswM

8.4.5.5 Ethlf_StartAllPorts

[SWS Ethlf 91103] Definition of API function Ethlf StartAllPorts

Service Name	Ethlf_StartAllPorts		
Syntax	Std_ReturnType EthIf_StartAllPorts (void		
Service ID [hex]	0x07		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Reentrant		
Parameters (in)	None		
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: Request was accepted E_NOT_OK: Request was rejected	
Description	Request to set all configured and affected EthSwtPorts to ETH_MODE_ACTIVE		
Available via	Ethlf.h		

8.4.5.6 Ethlf_SetSwitchMgmtInfo

[SWS_EthIf_91003] Definition of API function EthIf_SetSwitchMgmtInfo

Upstream requirements: SRS Eth 00125

Γ

Service Name	EthIf_SetSwitchMgmtInfo	
Syntax	Std_ReturnType EthIf_SetSwitchMgmtInfo (PduIdType PduId, EthSwt_MgmtInfoType* MgmtInfoPtr)	
Service ID [hex]	0x38	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld	Ethernet Interface PDU ID
	MgmtInfoPtr	Pointer to the management information
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Management infos successfully set E_NOT_OK: Setting of management infos failed
Description	Provides additional management information along to an Ethernet frame that requires special treatment within the Switch. For direct data provision, it has to be called before the transmit request is called. For indirect data provision, it can also be called in the context of the Trigger Transmit API.	
Available via	Ethlf.h	

[SWS_EthIf_00279] [The function shall be pre compile time configurable ON/OFF by the configuration parameter: EthIfSwitchManagementSupport.]

8.4.5.7 Ethlf_GetRxMgmtObject

[SWS_EthIf_91105] Definition of API function EthIf_GetRxMgmtObject [

Service Name	EthIf_GetRxMgmtObject	
Syntax	Std_ReturnType EthIf_GetRxMgmtObject (PduIdType PduId, EthSwt_MgmtObjectType **MgmtObjectPtr)	
Service ID [hex]	0x47	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	Pduld Ethernet Interface PDU ID	
Parameters (inout)	None	

Parameters (out)	**MgmtObjectPtr	MgmtObjectPtr Pointer to the management object
Return value	Std_ReturnType	E_OK: success E_NOT_OK: management object could not be obtained
Description	Request the MgmtObject of the (in this context) unique DataPtr.	
Available via	Ethlf.h	

8.4.5.8 Ethlf_GetTxMgmtObject

[SWS_EthIf_91106] Definition of API function EthIf_GetTxMgmtObject [

Service Name	EthIf_GetTxMgmtObject		
Syntax	Std_ReturnType EthIf_GetTxMgmtObject (PduIdType PduId, EthSwt_MgmtObjectType **MgmtObjectPtr)		
Service ID [hex]	0x48	0x48	
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	Pduld	Ethernet Interface PDU ID	
Parameters (inout)	None		
Parameters (out)	**MgmtObjectPtr	Pointer to the management object	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: management object could not be obtained	
Description	Request the MgmtObject of the (in this context) unique Bufldx.		
Available via	Ethlf.h		

1

8.4.5.9 Ethlf_GetSwitchPortSignalQuality

[SWS_EthIf_91058] Definition of API function EthIf_GetSwitchPortSignalQuality

Service Name	EthIf_GetSwitchPortSignalQuality
Syntax	<pre>Std_ReturnType EthIf_GetSwitchPortSignalQuality (uint8 SwitchIdx, uint8 SwitchPortIdx, EthIf_SignalQualityResultType* ResultPtr)</pre>
Service ID [hex]	0x1a

Sync/Async	Synchronous	
Reentrancy	Reentrant for different Ethernet switch indexes and Ethernet Switch port indexes. Non reentrant for the same SwitchPortIdx.	
Parameters (in)	SwitchIdx Index of the Ethernet switch within the context of the Ethernet Interface	
	SwitchPortIdx	Index of the Ethernet switch port within the context of the Ethernet Interface
Parameters (inout)	None	
Parameters (out)	ResultPtr	Pointer to the memory where the signal quality in percent shall be stored.
Return value	Std_ReturnType	E_OK: The signal quality retrieved successfully E_NOT_OK: The signal quality not retrieved successfully
Description	Retrieves the signal quality of the link of the given Ethernet switch port	
Available via	Ethlf.h	

I

[SWS_EthIf_00395] [The function $EthIf_GetSwitchPortSignalQuality shall forward the call to function <math>EthSwt_GetPortSignalQuality$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.10 Ethlf_SwitchPortGetLinkState

[SWS_EthIf_91109] Definition of API function EthIf_SwitchPortGetLinkState [

Service Name	EthIf_SwitchPortGetLinkState		
Syntax	Std_ReturnType EthIf_SwitchPortGetLinkState (uint8 SwitchIdx, uint8 SwitchPortIdx, EthTrcv_LinkStateType* LinkStatePtr)		
Service ID [hex]	0x4b		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	LinkStatePtr	ETHTRCV_LINK_STATE_DOWN: Switch port is disconnected ETHTRCV_LINK_STATE_ACTIVE: Switch port is connected	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: Link state of the indexed switch port could not be obtained, or the function is called in state ETHSWT_STATE_UNINIT or ETHSWT_STATE_INIT.	
Description	Obtains the link state of the indexed switch port		
Available via	Ethlf.h		

[SWS_EthIf_00419] [The function EthIf_SwitchPortGetLinkState shall forward the call to function EthSwt_GetLinkState of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.11 Ethlf SwitchPortGetBaudRate

[SWS_EthIf_91111] Definition of API function EthIf_SwitchPortGetBaudRate [

Service Name	Ethlf_SwitchPortGetBaudRa	ate	
Syntax	Std_ReturnType EthIf_SwitchPortGetBaudRate (uint8 SwitchIdx, uint8 SwitchPortIdx, EthTrcv_BaudRateType* BaudRatePtr)		
Service ID [hex]	0x4d		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortldx	Index of the port at the addressed switch	
Parameters (inout)	None	None	
Parameters (out)	BaudRatePtr	ETHTRCV_BAUD_RATE_10MBIT: 10MBit connection ETHTRCV_BAUD_RATE_100MBIT: 100MBit connection ETHTRCV_BAUD_RATE_1000MBIT: 1000MBit connection ETHTRCV_BAUD_RATE_2500MBIT: 2500MBit connection	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: Baud rate of the indexed switch port could not be obtained, or the function is called in state ETHSWT_STATE_UNINIT or ETHSWT_STATE_INIT.	
Description	Obtains the baud rate of the indexed switch port		
Available via	Ethlf.h		

[SWS_EthIf_00423] [The function $EthIf_SwitchPortGetBaudRate$ shall forward the call to function $EthSwt_GetBaudRate$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.12 Ethlf_SwitchPortGetDuplexMode

[SWS_EthIf_91113] Definition of API function EthIf_SwitchPortGetDuplexMode [

Service Name	EthIf_SwitchPortGetDuple	xMode	
Syntax	uint8 SwitchIdx, uint8 SwitchPortIo	Std_ReturnType EthIf_SwitchPortGetDuplexMode (uint8 SwitchIdx, uint8 SwitchPortIdx, EthTrcv_DuplexModeType* DuplexModePtr)	
Service ID [hex]	0x4f		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	DuplexModePtr	ETHTRCV_DUPLEX_MODE_HALF: half duplex connections ETHTRCV_DUPLEXMODE_FULL: full duplex connection	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: duplex mode of the indexed switch port could not be obtained, or the function is called in state ETHSWT_STATE_UNINIT or ETHSWT_STATE_INIT.	
Description	Obtains the duplex mode	Obtains the duplex mode of the indexed switch port	
Available via	Ethlf.h		

[SWS_EthIf_00428] [The function EthIf_SwitchPortGetDuplexMode shall forward the call to function EthSwt_GetDuplexMode of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.13 Ethlf_SwitchPortGetCounterValues

[SWS_EthIf_91115] Definition of API function EthIf_SwitchPortGetCounterValues

Service Name	EthIf_SwitchPortGetCounterValues	
Syntax	<pre>Std_ReturnType EthIf_SwitchPortGetCounterValues (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_CounterType* CounterPtr)</pre>	
Service ID [hex]	0x51	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver

	^
/	\

	SwitchPortIdx	Index of the port at the addressed switch
Parameters (inout)	None	
Parameters (out)	CounterPtr	counter values according to IETF RFC 1757, RFC 1643 and RFC 2233.
Return value	Std_ReturnType	E_OK: success E_NOT_OK: counter values read failure
Description	Reads a list with drop counter values of the corresponding port of the switch. The meaning of these values is described at Eth_CounterType.	
Available via	Ethlf.h	

1

[SWS_EthIf_00432] [The function EthIf_SwitchPortGetCounterValues shall forward the call to function EthSwt_GetCounterValues of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.14 Ethlf_SwitchPortGetRxStats

[SWS_EthIf_91116] Definition of API function EthIf_SwitchPortGetRxStats [

Service Name	Ethlf_SwitchPortGetRxStats		
Syntax	<pre>Std_ReturnType EthIf_SwitchPortGetRxStats (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_RxStatsType* RxStatsPtr)</pre>		
Service ID [hex]	0x52		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	RxStatsPtr	List of values according to IETF RFC 2819 (Remote Network Monitoring Management Information Base)	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: drop counter could not be obtained	
Description	Returns a list of statistic counters defined with Eth_RxTatsType. The majority of these Counters are derived from the IETF RFC2819.		
Available via	Ethlf.h		

[SWS_EthIf_00434] [The function $EthIf_SwitchPortGetRxStats$ shall forward the call to function $EthSwt_GetRxStats$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.15 Ethlf_SwitchPortGetTxStats

[SWS_EthIf_91117] Definition of API function EthIf_SwitchPortGetTxStats [

Service Name	EthIf_SwitchPortGetTxState	3	
Syntax	Std_ReturnType EthIf_SwitchPortGetTxStats (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_TxStatsType* TxStatsPtr)		
Service ID [hex]	0x53		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	-	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	TxStatsPtr List of values to read statistic values for transmission.		
Return value	Std_ReturnType	E_OK: success E_NOTOK: Tx-statistics could not be obtained	
Description	List of values to read statistic values for transmission.		
Available via	Ethlf.h		

[SWS_EthIf_00436] [The function $EthIf_SwitchPortGetTxStats$ shall forward the call to function $EthSwt_GetTxStats$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.16 Ethlf_SwitchPortGetTxErrorCounterValues

[SWS_EthIf_91118] Definition of API function EthIf_SwitchPortGetTxError CounterValues \lceil

Service Name	EthIf_SwitchPortGetTxErrorCounterValues	
Syntax	Std_ReturnType EthIf_SwitchPortGetTxErrorCounterValues (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_TxErrorCounterValuesType* TxStatsPtr)	
Service ID [hex]	0x54	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Drive
	SwitchPortIdx	Index of the port at the addressed switch
Parameters (inout)	None	

Parameters (out)	TxStatsPtr	List of values to read statistic error counter values for transmission.
Return value	Std_ReturnType	E_OK: success, E_NOTOK: Tx-statistics could not be obtained
Description	List of values to read statistic error counter values for transmission from.	
Available via	Ethlf.h	

[SWS_EthIf_00438] [The function EthIf_SwitchPortGetTxErrorCounterValues shall forward the call to function EthSwt_GetTxErrorCounterValues of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.17 Ethlf_SwitchPortGetMacLearningMode

[SWS_EthIf_91119] Definition of API function EthIf_SwitchPortGetMacLearning Mode [

Service Name	EthIf_SwitchPortGetMacLe	EthIf_SwitchPortGetMacLearningMode	
Syntax	uint8 SwitchIdx, uint8 SwitchPortId	Std_ReturnType EthIf_SwitchPortGetMacLearningMode (uint8 SwitchIdx, uint8 SwitchPortIdx, EthSwt_MacLearningType* MacLearningModePtr)	
Service ID [hex]	0x55		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	MacLearningModePtr	Defines whether MAC addresses shall be learned and if they shall be learned in software or hardware.	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: configuration could be persistently reset	
Description	Returns the MAC learning mode, i.e. 1.) HW learning enabled, 2.) Hardware learning disabled, 3.) Software learning enabled. Note: This feature is hardware dependent, i.e. the switch hardware needs to support the different learning modes		
Available via	Ethlf.h		

1

[SWS_EthIf_00440] [The function $EthIf_SwitchPortGetMacLearningMode shall forward the call to function <math>EthSwt_GetMacLearningMode of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]$

8.4.5.18 Ethlf GetSwitchPortIdentifier

[SWS_EthIf_91120] Definition of API function EthIf_GetSwitchPortIdentifier [

Service Name	Ethlf_GetSwitchPortIdentific	er	
Syntax	Std_ReturnType EthIf_GetSwitchPortIdentifier (uint8 SwitchIdx, uint8 SwitchPortIdx, uint32* OrgUniqueIdPtr, uint8* ModelNrPtr, uint8* RevisionNrPtr		
Service ID [hex]	0x56		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver	
	SwitchPortIdx	Index of the port at the addressed switch	
Parameters (inout)	None		
Parameters (out)	OrgUniqueldPtr	Pointer to the memory where the Organizationally Unique Identifier (OUI) shall be stored.	
	ModelNrPtr	Pointer to the memory where the Manufacturer's Model Number shall be stored.	
	RevisionNrPtr	Pointer to the memory where the Revision Number shall be stored.	
Return value	Std_ReturnType	E_OK: organizationally unique identifier of the Ethernet transceiver could be read. E_NOT_OK: organizationally unique identifier of the Ethernet transceiver could not be obtained (i.e. OUI is not available).	
Description	This function retrieves the C	This function retrieves the OUI (24 bit) of the indexed Ethernet switch port.	
Available via	Ethlf.h		

1

[SWS_EthIf_00442] [The function EthIf_GetSwitchPortIdentifier shall forward the call to function EthSwt_GetPortIdentifier of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.19 Ethlf GetSwitchIdentifier

[SWS_EthIf_91121] Definition of API function EthIf_GetSwitchIdentifier [

Service Name	Ethlf_GetSwitchIdentifier
Syntax	<pre>Std_ReturnType EthIf_GetSwitchIdentifier (uint8 SwitchIdx, uint32* OrgUniqueIdPtr)</pre>
Service ID [hex]	0x57

Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver
Parameters (inout)	None	
Parameters (out)	OrgUniqueIdPtr Pointer to the memory where the Organizationally Unique Identifier shall be stored.	
Return value	Std_ReturnType	E_OK: organizationally unique identifier of the Ethernet switch could be read. E_NOT_OK: organizationally unique identifier of the Ethernet switch could not be read (i.e. no OUI is available for this Ethernet switch)
Description	Obtain the Organizationally Unique Identifier that is given by the IEEE of the indexed Ethernet switch. This function shall provide the OUI of Ethernet switch. The OUI has a size of 24 bit. If a ethernet switch can provide the OUI the 8 most significant bits of the OUI shall be set to 0x00xxxxxx. If a Ethernet switch can not provide the OUI the 8 most significant bits of the OUI shall be set to 0xFFxxxxxx.	
Available via	Ethlf.h	

[SWS_EthIf_00444] [The function $EthIf_GetSwitchIdentifier$ shall forward the call to function $EthSwt_GetSwitchIdentifier$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.20 Ethlf_WritePortMirrorConfiguration

[SWS_EthIf_91122] Definition of API function EthIf_WritePortMirrorConfiguration

Service Name	EthIf_WritePortMirrorConfiguration	
Syntax	Std_ReturnType EthIf_WritePortMirrorConfiguration (uint8 MirroredSwitchIdx, const EthSwt_PortMirrorCfgType* PortMirrorConfigurationPtr)	
Service ID [hex]	0x58	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	MirroredSwitchIdx	Index of the switch within the context of the Ethernet Switch Driver, where the Ethernet switch port is located, that has to be mirrored
	PortMirrorConfiguration Ptr	_
Parameters (inout)	None	
Parameters (out)	None	

Return value	Std_ReturnType	E_OK: the port mirror configuration for the indexed Ethernet switch port was written. E_NOT_OK: the port mirror configuration for the indexed Ethernet switch port was not written. (i.e. indexed ethernet switch is not available) ETHSWT_PORT_MIRRORING_CONFIGURATION_NOT SUPPORTED: port mirroring configuration is not supported by Ethernet switch driver or by the Ethernet switch hardware
Description	Store the given port mirror configuration in a shadow buffer in the Ethernet switch driver for the given MirroredSwitchIdx.	
Available via	Ethlf.h	

1

[SWS_EthIf_00446] [The function $EthIf_WritePortMirrorConfiguration$ shall forward the call to function $EthSwt_WritePortMirrorConfiguration$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).

8.4.5.21 Ethlf_ReadPortMirrorConfiguration

[SWS_EthIf_91123] Definition of API function EthIf_ReadPortMirrorConfiguration

Service Name	EthIf_ReadPortMirrorConfi	guration	
Syntax	uint8 MirroredSwit	Std_ReturnType EthIf_ReadPortMirrorConfiguration (uint8 MirroredSwitchIdx, EthSwt_PortMirrorCfgType* PortMirrorConfigurationPtr)	
Service ID [hex]	0x59	0x59	
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	MirroredSwitchIdx	Index of the Ethernet switch within the context of the Ethernet Switch Driver, where the Ethernet switch ports are located, that have to be mirrored	
Parameters (inout)	None	None	
Parameters (out)	PortMirrorConfiguration Ptr	Pointer to the memory where the port configuration shall be stored.	
Return value	Std_ReturnType	E_OK: the port mirror configuration for the indexed Ethernet switch port was red successfully. E_NOT_OK: the port mirror configuration for the indexed Ethernet switch was not red successfully. (i.e. indexed Ethernet switch is not available)	
Description	Obtain the port mirror confi	Obtain the port mirror configuration of the given Ethernet switch.	
Available via	Ethlf.h	Ethlf.h	

[SWS_EthIf_00448] [The function EthIf_ReadPortMirrorConfiguration shall forward the call to function EthSwt_ReadPortMirrorConfiguration of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).

8.4.5.22 Ethlf_DeletePortMirrorConfiguration

[SWS_EthIf_91124] Definition of API function EthIf_DeletePortMirrorConfiguration [

Service Name	EthIf_DeletePortMirrorConfiguration		
Syntax	Std_ReturnType EthIf_DeletePortMirrorConfiguration (uint8 MirroredSwitchIdx)		
Service ID [hex]	0x5a		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant Reentrant for different MirroredSwitchldx. Non reentrant for the same Switchldx.		
Parameters (in)	MirroredSwitchIdx	Index of the switch within the context of the Ethernet Switch Driver.	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: Port mirror configuration was deleted successfully E_NOT_OK: Port mirror configuration was not deleted successfully. (e.g. the port mirroring is enabled)	
Description	Delete the stored port mirror configuration of the given MirroredSwitchldx. If no port mirror configuration was found for the given MirroredSwitchldx, the return value shall be E_OK.		
Available via	Ethlf.h		

[SWS_EthIf_00450] [The function EthIf_DeletePortMirrorConfiguration shall forward the call to function EthSwt_DeletePortMirrorConfiguration of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.23 Ethlf_GetPortMirrorState

[SWS_EthIf_91125] Definition of API function EthIf_GetPortMirrorState [

Service Name	EthIf_GetPortMirrorState	
Syntax	Std_ReturnType EthIf_GetPortMirrorState (uint8 SwitchIdx, uint8 PortIdx, EthSwt_PortMirrorStateType* PortMirrorStatePtr)	
Service ID [hex]	0x5b	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver
	Portldx	Index of the port at the addressed switch
Parameters (inout)	None	
Parameters (out)	PortMirrorStatePtr	Pointer to the memory where the port mirroring state (either PORT_MIRRORING_ENABLED or PORT_MIRRORING_DISABLED) of the given Ethernet switch port shall be stored.
Return value	Std_ReturnType	E_OK: the port mirroring state for the indexed Ethernet switch port returned successfully. E_NOT_OK: the port mirror configuration for the indexed Ethernet switch returned not successfully. (i.e. indexed ethernet switch port is not available)
Description	Obtain the current status of the port mirroring for the indexed Ethernet switch port	
Available via	Ethlf.h	

1

[SWS_EthIf_00452] [The function $EthIf_GetPortMirrorState$ shall forward the call to function $EthSwt_GetPortMirrorState$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.24 Ethlf_SetPortMirrorState

[SWS_EthIf_91126] Definition of API function EthIf_SetPortMirrorState [

Service Name	EthIf_SetPortMirrorState
Syntax	<pre>Std_ReturnType EthIf_SetPortMirrorState (uint8 MirroredSwitchIdx, uint8 PortIdx, EthSwt_PortMirrorStateType PortMirrorState)</pre>
Service ID [hex]	0x5c
Sync/Async	Synchronous
Reentrancy	Non Reentrant

Parameters (in)	MirroredSwitchIdx	Index of the Ethernet switch within the context of the Ethernet Switch Driver, where the port mirroring configuration is located that has to be enabled and disabled, repectively.
	Portldx	Index of the port at the addressed switch
	PortMirrorState	Contain the requested port mirroring state either PORT_ MIRRORING_ENABLED or PORT_MIRRORING_DISABLED
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	Std_ReturnType E_OK: the requested port mirroring state for the indexed Ethernet switch port was set successfully. E_NOT_OK: the requested port mirroring state for the indexed Ethernet switch was not set successfully. (i.e. indexed Ethernet switch is not available, no port mirrior configuration is available)
Description	Request to set the given port mirroring state of the port mirror configuration for the given Ethernet switch.	
Available via	Ethlf.h	

Ī

[SWS_EthIf_00454] [The function $EthIf_SetPortMirrorState$ shall forward the call to function $EthSwt_SetPortMirrorState$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.25 Ethlf_SetPortTestMode

[SWS_EthIf_91127] Definition of API function EthIf_SetPortTestMode [

Service Name	Ethlf_SetPortTestMode	
Syntax	Std_ReturnType EthIf_SetPortTestMode (uint8 SwitchIdx, uint8 PortIdx, EthTrcv_PhyTestModeType Mode)	
Service ID [hex]	0x5d	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Driver	
	Portldx	Index of the port at the addressed switch
	Mode	Test mode to be activated
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: the port test mode for the indexed Ethernet switch port was set successfully. E_NOT_OK: the port test mode for the indexed Ethernet switch was not set successfully. (i.e. indexed Ethernet switch port is not available)
Description	Activates a given test mode of the indexed Ethernet switch port.	

Available via	Ethlf.h
---------------	---------

[SWS_EthIf_00456] [The function $EthIf_SetPortTestMode$ shall forward the call to function $EthSwt_SetPortTestMode$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.26 Ethlf_SetPortLoopbackMode

[SWS_EthIf_91128] Definition of API function EthIf_SetPortLoopbackMode [

Service Name	Ethlf_SetPortLoopbackMo	Ethlf_SetPortLoopbackMode	
Syntax	uint8 SwitchIdx, uint8 PortIdx,	·	
Service ID [hex]	0x5e		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Driv		
	Portldx	Index of the port at the addressed switch	
	Mode	Loop-back mode to be activated	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: the port mirroring loop-back back mode for the indexed Ethernet switch port was activated successfully. E_NOT_OK: the port mirroring loop-back back mode for the indexed Ethernet switch port was not activated successfully. (i.e. indexed Ethernet switch port is not available)	
Description	Activates a given test loop	Activates a given test loop-back mode of the indexed Ethernet switch port.	
Available via	Ethlf.h	Ethlf.h	

1

[SWS_EthIf_00458] [The function $EthIf_SetPortLoopbackMode$ shall forward the call to function $EthSwt_SetPortLoopbackMode$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.27 Ethlf_SetPortTxMode

[SWS_EthIf_91129] Definition of API function EthIf_SetPortTxMode [

Service Name	EthIf_SetPortTxMode		
Syntax	uint8 SwitchIdx, uint8 PortIdx,	· ·	
Service ID [hex]	0x5f		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Driv		
	Portldx	Index of the port at the addressed switch	
	Mode	Transmission mode to be activated	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: the port Tx mode for the indexed Ethernet switch port was activated successfully. E_NOT_OK: the port Tx mode for the indexed Ethernet switch port was not activated successfully. (i.e. indexed Ethernet switch port is not available)	
Description	Activates a given transm	Activates a given transmission mode of the indexed Ethernet switch port.	
Available via	Ethlf.h		

[SWS_EthIf_00460] [The function $EthIf_SetPortTxMode$ shall forward the call to function $EthSwt_SetPortTxMode$ of the corresponding Ethernet Switch Driver (EthIf-SwitchIdx).]

8.4.5.28 Ethlf_GetPortCableDiagnosticsResult

[SWS_EthIf_91130] Definition of API function EthIf_GetPortCableDiagnosticsResult \lceil

Service Name	EthIf_GetPortCableDiagnosticsResult	
Syntax	Std_ReturnType EthIf_GetPortCableDiagnosticsResult (uint8 SwitchIdx, uint8 PortIdx, EthTrcv_CableDiagResultType* ResultPtr)	
Service ID [hex]	0x60	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	

Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver
	Portldx	Index of the port at the addressed switch
Parameters (inout)	None	
Parameters (out)	ResultPtr	Pointer to the location where the cable diagnostics result shall be stored
Return value	Std_ReturnType	E_OK:the port cable diagnostic result for the indexed Ethernet switch port was obtained successfully. E_NOT_OK: the port cable diagnostic result for the indexed Ethernet switch port was not obtained successfully. (i.e. indexed Ethernet switch port is not available)
Description	Retrieves the cable diagnostics result of the indexed Ethernet switch port respectively the referenced Ethernet Transceiver Driver.	
Available via	Ethlf.h	

1

[SWS_EthIf_00462] [The function $EthIf_GetPortCableDiagnosticsResult$ shall forward the call to function $EthSwt_GetPortCableDiagnosticsResult$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.29 Ethlf_RunPortCableDiagnostic

[SWS_EthIf_91131] Definition of API function EthIf_RunPortCableDiagnostic \lceil

Service Name	EthIf_RunPortCableDiagnos	stic
Syntax	<pre>Std_ReturnType EthIf_RunPortCableDiagnostic (uint8 SwitchIdx, uint8 PortIdx)</pre>	
Service ID [hex]	0x61	
Sync/Async	Synchronous	
Reentrancy	Reentrant Reentrant for different Switchldx and Portldx. Non reentrant for the same Switchldx and Portldx.	
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver.
	Portldx	Index of the port at the addressed switch.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The trigger to run the cable diagnostic has been accepted E_NOT_OK: The trigger to run the cable diagnostic has not been accepted
Description	Trigger the cable diagnostics of the given Ethernet Switch port (Portldx) by calling EthTrcv_Run CableDiagnostic of the referenced Ethernet transceiver.	
Available via	Ethlf.h	

ı

[SWS_EthIf_00464] [If the function EthIf_RunPortCableDiagnostic is called, EthIf shall ensure that the corresponding EthIfController is in mode ETH_MODE_ACTIVE and forward the call to function EthSwt_RunPortCableDiagnostic of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.30 Ethlf_SwitchGetCfgDataRaw

[SWS Ethlf 91133] Definition of API function Ethlf SwitchGetCfgDataRaw

Service Name	EthIf_SwitchGetCfgDate	Ethlf_SwitchGetCfgDataRaw	
Syntax	uint8 SwitchIdx uint32 Offset, uint16 Length,		
Service ID [hex]	0x63		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Switchldx	Index of the Ethernet switch within the context of the Ethernet Switch Driver	
	Offset	Offset of the Ethernet switch memory from where the reading starts	
	Length	Length of data in bytes that shall be copied	
Parameters (inout)	None	None	
Parameters (out)	BufferPtr	BufferPtr Pointer to the location where the data shall be copied	
Return value	Std_ReturnType	E_OK: the data read was triggered successfully E_NOT_OK: the data read was not triggered successfully (i.e. indexed Ethernet switch is not available)	
Description	Retrieves the data in me	Retrieves the data in memory of the indexed Ethernet switch in variable length	
Available via	Ethlf.h		

1

[SWS_EthIf_00468] [The function $EthIf_SwitchGetCfgDataRaw$ shall forward the call to function $EthSwt_GetCfgDataRaw$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.31 Ethlf_SwitchGetCfgDataInfo

[SWS_EthIf_91134] Definition of API function EthIf_SwitchGetCfgDataInfo

Service Name	Ethlf_SwitchGetCfgDataInf	EthIf_SwitchGetCfgDataInfo	
Syntax	<pre>Std_ReturnType EthIf_SwitchGetCfgDataInfo (uint8 SwitchIdx, uint32* DataSizePtr, uint32* DataAdressPtr)</pre>		
Service ID [hex]	0x64		
Sync/Async	Asynchronous	Asynchronous	
Reentrancy	Reentrant		
Parameters (in)	Switchldx	Index of the Ethernet switch within the context of the Ethernet Switch Driver	
Parameters (inout)	None	None	
Parameters (out)	DataSizePtr Pointer to the location where the total size of the configuration data shall be copied		
	DataAdressPtr	Pointer to the location where the start address of the configuration registers shall be copied	
Return value	Std_ReturnType	E_OK: the data was obtained successfully E_NOT_OK: the data was not obtained successfully. (i.e. indexed Ethernet switch is not available)	
Description	Retrieves the total size of d	Retrieves the total size of data and the memory start address of the indexed Ethernet Switch.	
Available via	Ethlf.h		

1

[SWS_EthIf_00470] [The function $EthIf_SwitchGetCfgDataInfo$ shall forward the call to function $EthSwt_GetCfgDataInfo$ of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.5.32 Ethlf SwitchPortGetMaxQueueBufferFillLevel

[SWS_EthIf_91135] Definition of API function EthIf_SwitchPortGetMaxQueue BufferFillLevel \lceil

Service Name	Ethlf_SwitchPortGetMaxQueueBufferFillLevel	
Syntax	Std_ReturnType EthIf_SwitchPortGetMaxQueueBufferFillLevel (uint8 SwitchPortIdx, uint8 PortIdx, uint8 SwitchPortEgressQueueIdx, uint8 SwitchPortEgressMaxQueueBufferFillLevelPtr)	
Service ID [hex]	0x65	
Sync/Async	Asynchronous	

Reentrancy	Reentrant Reentrant for different Switchldx and Portldx. Non reentrant for the same Switchldx and Portldx.	
Parameters (in)	SwitchPortIdx	Index of the Ethernet switch within the context of the Ethernet Switch Driver.
	Portldx	Index of the Ethernet switch egress port at the addressed Ethernet switch.
	SwitchPortEgressQueue Idx	Index of the egress queue of the addressed Ethernet switch port
Parameters (inout)	None	
Parameters (out)	SwitchPortEgressMax QueueBufferFillLevelPtr	Pointer to a memory location, where the maximum amount of allocated queue buffer (in bytes) since the last read out shall be stored
Return value	Std_ReturnType	E_OK: success E_NOT_OK: The maximal queue buffer level could not be obtained
Description	The function retrieves the maximum amount of allocated queue buffer of the indexed Ethernet switch egress port. If the Ethernet switch hardware does not support Ethernet switch port based maximal queue buffer level, the content of SwitchPortEgressMaxQueueBufferFillLevelPtr shall be set to 0xFFFFFFFF. This API may be called by e.g. a CDD.	
Available via	Ethlf.h	

١

[SWS_EthIf_00472] [The function EthIf_SwitchPortGetMaxQueueBufferFil-level shall forward the call to function EthSwt_GetMaxQueueBufferFillLevel of the corresponding Ethernet Switch Driver (EthIfSwitchIdx).]

8.4.6 TimeSync

8.4.6.1 Ethlf_SwitchEnableTimeStamping

[SWS_EthIf_91007] Definition of API function EthIf_SwitchEnableTimeStamping

Upstream requirements: SRS Eth 00125

Γ

Service Name	EthIf_SwitchEnableTimeStamping	
Syntax	Std_ReturnType EthIf_SwitchEnableTimeStamping (PduIdType PduId, EthSwt_MgmtInfoType* MgmtInfo)	
Service ID [hex]	0x39	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld Ethernet Interface PDU ID	
Parameters (inout)	None	
Parameters (out)	MgmtInfo Management information	

Return value	Std_ReturnType	E_OK: Time stamping on egress successfully enabled E_NOT_OK: Enabling of time stamping on egress has been failed
Description	Activates egress time stamping on a dedicated message object, addressed addressed by the Pduld which is associated with an Ethernet controller index and an egress queue.	
Available via	Ethlf.h	

[SWS_EthIf_00387] [If EthIf_SwitchEnableTimeStamping is called, the EthIf shall call EthSwt_PortEnableTimeStamp for every port in the group.]

[SWS_EthIf_00285] [The function shall be pre compile time configurable ON/OFF by the configuration parameter: EthIfGlobalTimeSupport.]

8.4.6.2 Ethlf_GetCurrentTime

[SWS_EthIf_00154] Definition of API function EthIf_GetCurrentTime

Status: OBSOLETE

ſ

Service Name	EthIf_GetCurrentTime (obs	Ethlf_GetCurrentTime (obsolete)	
Syntax	<pre>Std_ReturnType EthIf_GetCurrentTime (uint8 CtrlIdx, Eth_TimeStampQualType* timeQualPtr, Eth_TimeStampType* timeStampPtr)</pre>		
Service ID [hex]	0x22		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the addresses ETH controller.	
Parameters (inout)	None		
Parameters (out)	timeQualPtr	quality of HW time stamp, e.g. based on current drift	
	timeStampPtr	current time stamp	
Return value	Std_ReturnType	E_OK: successful E_NOT_OK: failed	
Description	Returns a time value out of the HW registers according to the capability of the HW. Is the HW resolution is lower than the Eth_TimeStampType resolution resp. range, the remaining bits will be filled with 0.		
		Important Note: EthIf_GetCurrentTime may be called within an exclusive area.	
	Tags: atp.Status=obsolete		
Available via	Ethlf.h		

-

[SWS_EthIf_00155]

Status: OBSOLETE

[If development error detection is enabled: the function shall check that the service EthIf_Init was previously called. If the check fails, the function shall raise the development error ETHIF_E_UNINIT.|

[SWS Ethlf 00157]

Status: OBSOLETE

[If development error detection is enabled: the function shall check the parameter timeQualPtr and timeStampPtr for being valid. If the check fails, the function shall raise the development error ETHIF_E_PARAM_POINTER.]

[SWS Ethlf 00158]

Status: OBSOLETE

The function shall be pre compile time configurable On/Off by the configuration pa-

rameter: EthIfGlobalTimeSupport.

[SWS_EthIf_00473]

Status: OBSOLETE

[The EthIf module shall apply appropriate mechanisms to allow calls of EthIf_-GetCurrentTime API from other partitions than its main function, e.g. by providing an EthIf satellite.]

8.4.6.3 Ethlf_GetCurrentTimeTuple

[SWS_EthIf_91066] Definition of API function EthIf_GetCurrentTimeTuple

Status: DRAFT

Upstream requirements: SRS_Eth_00175

Service Name	Ethlf_GetCurrentTimeTuple (draft)
Syntax	Std_ReturnType EthIf_GetCurrentTimeTuple (uint8 CtrlIdx, uint8 ClkUnitIdx, TimeTupleType* currentTimeTuplePtr)
Service ID [hex]	0x95
Sync/Async	Synchronous
Reentrancy	Non Reentrant

Parameters (in)	Ctrlldx	Index of Ethernet Controller within the context of the Ethernet Interface which owns the clock unit
	ClkUnitldx	Index of the Clock Unit within the context of the Ethernet Interface to provide the time tuple
Parameters (inout)	None	
Parameters (out)	currentTimeTuplePtr	Current time tuple with the
		value of the free-running clock used for timestamping
		value of the adjustable PHC
Return value	Std_ReturnType	E_OK: Current time successfully retrieved E_NOT_OK: Current time could not be retrieved
Description	Reads the current time of the timestamp clock and the current time of the PHC in an atomic operation.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

-

[SWS_EthIf_00603]

Status: DRAFT

Upstream requirements: SRS_BSW_00386

[If development error detection is enabled: the function shall check the parameter Clk UnitIdx for being valid. If the check fails, the function shall raise the development error ETHIF_E_INV_CLKUNIT_IDX.|

[SWS_EthIf_00585]

Status: DRAFT

Upstream requirements: SRS_Eth_00175

[The function EthIf_GetCurrentTimeTuple shall forward the call to function <Eth-Drv>_GetCurrentTimeTuple by setting the CtrlIdx to the Ethernet controller which is referenced via EthIfEthCtrlRef of the corresponding EthIfPhysController and ClkUnitIdx to Ethernet controller clock unit which is referenced via EthIf-ClkUnitRef of the given ClkUnitIdx.|

[SWS Ethlf 00605]

Status: DRAFT

Upstream requirements: SRS_BSW_00171

[The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfGlobalTimeSupport.]

[SWS Ethlf 00606]

Status: DRAFT

Upstream requirements: SRS_BSW_00459

[The EthIf module shall apply appropriate mechanisms to allow calls of EthIf_GetCurrentTimeTuple API from other partitions than its main function, e.g. by providing an EthIf satellite.|

8.4.6.4 Ethlf_EnableEgressTimeStamp

[SWS_EthIf_00160] Definition of API function EthIf_EnableEgressTimeStamp [

Service Name	EthIf_EnableEgressTimeStamp	
Syntax	<pre>void EthIf_EnableEgressTimeStamp (PduIdType PduId)</pre>	
Service ID [hex]	0x23	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld	Ethernet Interface PDU ID
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Activates egress time stamping on a dedicated message object. Some HW does store once the egress time stamp marker and some HW needs it always before transmission. There will be no "disable" functionality, due to the fact, that the message type is always "time stamped" by network design.	
Available via	Ethlf.h	

[SWS_EthIf_00164] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGlobalTimeSupport.]

8.4.6.5 Ethlf_GetEgressTimeStamp

[SWS_EthIf_00166] Definition of API function EthIf_GetEgressTimeStamp [

Service Name	EthIf_GetEgressTimeStam	Ethlf_GetEgressTimeStamp	
Syntax	Std_ReturnType EthIf_GetEgressTimeStamp (PduIdType TxPduId, Eth_TimeStampQualType* timeQualPtr, Eth_TimeStampType* timeStampPtr)		
Service ID [hex]	0x24		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	TxPduld	Ethernet Interface PDU ID	
Parameters (inout)	None		
Parameters (out)	timeQualPtr	quality of HW time stamp, e.g. based on current drift	
	timeStampPtr	current time stamp	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed to read time stamp.	
Description	Reads back the egress time stamp on a dedicated message object. It must be called within the TxConfirmation() function.		
Available via	Ethlf.h		

[SWS_EthIf_00170] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGlobalTimeSupport.]

8.4.6.6 Ethlf_GetIngressTimeStamp

[SWS Ethlf 00172] Definition of API function Ethlf GetIngressTimeStamp

Service Name	EthIf_GetIngressTimeStamp	
Syntax	Std_ReturnType EthIf_GetIngressTimeStamp (PduIdType PduId, Eth_TimeStampQualType* timeQualPtr, Eth_TimeStampType* timeStampPtr)	
Service ID [hex]	0x25	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld	Ethernet Interface PDU ID
Parameters (inout)	None	
Parameters (out)	timeQualPtr	quality of HW time stamp, e.g. based on current drift
	timeStampPtr	current time stamp

Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed to read time stamp.
Description	Reads back the ingress time stamp on a dedicated message object. It must be called within the RxIndication() function.	
Available via	Ethlf.h	

[SWS_EthIf_00176] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfGlobalTimeSupport.]

8.4.7 Transceiver Driver

8.4.7.1 Ethlf_CheckWakeup

[SWS_EthIf_00244] Definition of API function EthIf_CheckWakeup [

Service Name	Ethlf_CheckWakeup	Ethlf_CheckWakeup	
Syntax		Std_ReturnType EthIf_CheckWakeup (
Service ID [hex]	0x30		
Sync/Async	Asynchronous		
Reentrancy	Reentrant	Reentrant	
Parameters (in)	WakeupSource	Source device which initiated the wake up event. The source device could either be a Ethernet switch or a Ethernet transceiver	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK when the request to check for a wake-up of the affected Ethernet hardware (e.g. PHY) has been accepted. E_NOT_OK when the request to check for a wake-up of the affected Ethernet hardware is rejected.	
Description	This API request the affected Ethernet hardware to check for a signaled wake-up. The used Ethernet hardware could be an Ethernet switch or Ethernet transceiver (PHY). This is used e.g. for Ethernet hardware which is compliant to the specification of Open Alliance TC10. This API is called by the integration code. The function could be called in context of the interrupt or on task level.		
Available via	Ethlf.h		

١

[SWS_EthIf_00245]

Upstream requirements: SRS_Eth_00106

[For all affected Ethernet transceivers (either referenced by EthIfTransceiver or by EthIfSwitchPortGroups) the function EthIfCheckWakeup shall forward the call to function $EthIfcv>_CheckWakeup$ of the respective Ethernet Transceiver Driver. The call shall be forwarded to each Ethernet transceiver only once

Note:[SWS_EthIf_00245] avoids multiple calls if multiple EthIfSwitchPortGroups and/or multiple EthIfControllers reference the same EthIfTransceiver.

[SWS Ethlf 00500]

Upstream requirements: SRS Eth 00106

[For all affected Ethernet switches (referenced by EthIfSwitch) the function EthIf_-CheckWakeup shall forward the call to function EthSwt_SwitchCheckWakeup of the respective Ethernet Switch Driver. The call shall be forwarded to each Ethernet switch only once.

Note:[SWS_EthIf_00500] avoids multiple calls if multiple EthIfControllers reference the same EthIfSwitch.

8.4.7.2 Ethlf_GetPhyWakeupReason

[SWS_EthIf_91004] Definition of API function EthIf_GetPhyWakeupReason

Upstream requirements: SRS_Eth_00107

Γ

Service Name	EthIf_GetPhyWakeupReaso	EthIf_GetPhyWakeupReason	
Syntax	Std_ReturnType EthIf_GetPhyWakeupReason (uint8 TrcvIdx, EthTrcv_WakeupReasonType* WakeupReasonPtr)		
Service ID [hex]	0x69		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant		
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface	
Parameters (inout)	None		
Parameters (out)	WakeupReasonPtr	Pointer to structure of least recent wakeup event, which was detected by the Ethernet PHY	
Return value	Std_ReturnType	E_OK: PHY wake up reason request has been accepted. E_NOT_OK: PHY wake up reason request has not been accepted.	
Description	This function obtains the wake up reasons of the indexed Ethernet Transceiver (PHY) by calling EthTrcv_GetBusWuReason()		
Available via	Ethlf.h		

١

[SWS Ethlf 00486]

Upstream requirements: SRS_Eth_00107

[The function EthIf_GetPhyWakeupReason shall forward the call to function EthTrcv_GetBusWuReason of the corresponding Ethernet Transceiver Driver (EthIf-TransceiverIdx).|

8.4.7.3 Ethlf_GetTrcvSignalQuality

[SWS_EthIf_91056] Definition of API function EthIf_GetTrcvSignalQuality [

Service Name	Ethlf_GetTrcvSignalQu	EthIf_GetTrcvSignalQuality	
Syntax	uint8 TrcvIdx,	<pre>Std_ReturnType EthIf_GetTrcvSignalQuality (uint8 TrcvIdx, EthIf_SignalQualityResultType* ResultPtr)</pre>	
Service ID [hex]	0x18		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trevldx	Index of the transceiver within the context of the Ethernet Interface	
Parameters (inout)	None	None	
Parameters (out)	ResultPtr	Pointer to the memory where the signal quality in percent shall be stored.	
Return value	Std_ReturnType	E_OK: The signal quality retrieved successfully E_NOT_OK: The signal quality not retrieved successfully	
Description	Retrieves the signal qu	Retrieves the signal quality of the link of the given Ethernet transceiver	
Available via	Ethlf.h	Ethlf.h	

[SWS_EthIf_00391] [The function EthIf_GetTrcvSignalQuality shall forward the call to function EthTrcv_GetPhySignalQuality of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).|

8.4.7.4 Ethlf_SetPhyTestMode

[SWS_EthIf_91016] Definition of API function EthIf_SetPhyTestMode

Upstream requirements: SRS Eth 00117

Γ

Service Name	EthIf_SetPhyTestMode	EthIf_SetPhyTestMode	
Syntax	uint8 TrcvIdx,	Std_ReturnType EthIf_SetPhyTestMode (uint8 TrcvIdx, EthTrcv_PhyTestModeType Mode)	
Service ID [hex]	0x17		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different TrcvI	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface	
	Mode	Test mode to be activated	
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted.	
Description	Activates a given test mode.		
Available via	Ethlf.h		

ı

[SWS_EthIf_00324] [The function EthIf_SetPhyTestMode shall forward the call to function EthTrcv_SetPhyTestMode of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.5 Ethlf_SetPhyLoopbackMode

[SWS_EthIf_91018] Definition of API function EthIf_SetPhyLoopbackMode

Upstream requirements: SRS Eth 00117

Γ

Service Name	EthIf_SetPhyLoopbackMode
Syntax	Std_ReturnType EthIf_SetPhyLoopbackMode (uint8 TrcvIdx, EthTrcv_PhyLoopbackModeType Mode)
Service ID [hex]	0x12
Sync/Async	Synchronous

Reentrancy	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface
	Mode	Loopback mode to be activated
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType E_OK: The request has been accepted E_NOT_OK: The request has not been accepted.	
Description	Activates a given loopback mode.	
Available via	Ethlf.h	

[SWS_EthIf_00327] [The function EthIf_SetPhyLoopbackMode shall forward the call to function EthTrcv_SetPhyLoopbackMode of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.6 Ethlf_SetPhyTxMode

[SWS_EthIf_91061] Definition of API function EthIf_SetPhyTxMode

Upstream requirements: SRS_Eth_00117

Γ

Service Name	Ethlf_SetPhyTxMode	
Syntax	Std_ReturnType EthIf_SetPhyTxMode (uint8 TrcvIdx, EthTrcv_PhyTxModeType Mode)	
Service ID [hex]	0x13	
Sync/Async	Synchronous	
Reentrancy	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface
	Mode	Transmission mode to be activated
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted
Description	Activates a given transmission mode.	
Available via	Ethlf.h	

ı

[SWS_EthIf_00388] [The function $EthIf_SetPhyTxMode$ shall forward the call to function $EthTrcv_SetPhyTxMode$ of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.7 Ethlf_GetCableDiagnosticsResult

[SWS_EthIf_91014] Definition of API function EthIf_GetCableDiagnosticsResult

Upstream requirements: SRS_Eth_00117

ſ

Service Name	EthIf_GetCableDiagnostics	EthIf_GetCableDiagnosticsResult	
Syntax	Std_ReturnType EthIf_GetCableDiagnosticsResult (uint8 TrcvIdx, EthTrcv_CableDiagResultType* ResultPtr)		
Service ID [hex]	0x14	0x14	
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.		
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Interface	
Parameters (inout)	None		
Parameters (out)	ResultPtr	Pointer to the location where the cable diagnostics result shall be stored	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description	Retrieves the cable diagnostics result of a given transceiver.		
Available via	Ethlf.h		

1

[SWS_EthIf_00330] [The function $EthIf_GetCableDiagnosticsResult$ shall forward the call to function $EthIrcv_GetCableDiagnosticsResult$ of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).

8.4.7.8 Ethlf_GetPhyldentifier

[SWS_EthIf_91020] Definition of API function EthIf_GetPhyldentifier

Upstream requirements: SRS Eth 00117

Γ

Service Name	EthIf_GetPhyIdentifier		
Syntax	uint8 TrcvIdx, uint32* OrgUniq uint8* ModelNrP	Std_ReturnType EthIf_GetPhyIdentifier (uint8 TrcvIdx, uint32* OrgUniqueIdPtr, uint8* ModelNrPtr, uint8* RevisionNrPtr)	
Service ID [hex]	0x15		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant for different	Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trevldx	Index of the transceiver within the context of the Ethernet Interface	
Parameters (inout)	None	None	
Parameters (out)	OrgUniqueIdPtr	Pointer to the memory where the Organizationally Unique Identifier shall be stored.	
	ModelNrPtr	Pointer to the memory where the Manufacturer's Model Number shall be stored.	
	RevisionNrPtr	Pointer to the memory where the Revision Number shall be stored.	
Return value	Std_ReturnType	E_OK: The request has been accepted E_NOT_OK: The request has not been accepted	
Description		Obtains the PHY identifier of the Ethernet Interface according to IEEE 802.3-2015 chapter 22.2.4.3.1 PHY Identifier.	
Available via	Ethlf.h	Ethlf.h	

[SWS_EthIf_00334] [The function EthIf_GetPhyIdentifier shall forward the call to function EthTrcv_GetPhyIdentifier of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).|

8.4.7.9 Ethlf_GetTransceiverMode

[SWS_EthIf_91108] Definition of API function EthIf_GetTransceiverMode [

Service Name	EthIf_GetTransceiverMode
Syntax	Std_ReturnType EthIf_GetTransceiverMode (uint8 TrcvIdx, Eth_ModeType* TrcvModePtr)

Service ID [hex]	0x4a	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Trcvldx Index of the transceiver within the context of the Ethernet Transceiver Driver	
Parameters (inout)	None	
Parameters (out)	TrcvModePtr	ETH_MODE_DOWN: the transceiver is disabled ETH_MODE_ ACTIVE: the transceiver is enable
Return value	Std_ReturnType	E_OK: success E_NOT_OK: transceiver could not be initialized
Description	Obtains the state of the indexed transceiver	
Available via	Ethlf.h	

[SWS_EthIf_00417] [The function EthIf_GetTransceiverMode shall forward the call to function <EthTrcv>_GetTransceiverMode of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.10 Ethlf_TransceiverGetLinkState

[SWS_EthIf_91110] Definition of API function EthIf_TransceiverGetLinkState

Service Name	Ethlf_TransceiverGetLinkSt	Ethlf_TransceiverGetLinkState	
Syntax	Std_ReturnType EthIf_TransceiverGetLinkState (uint8 TrcvIdx, EthTrcv_LinkStateType* LinkStatePtr)		
Service ID [hex]	0x4c		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Trevldx	Index of the transceiver within the context of the Ethernet Transceiver Driver	
Parameters (inout)	None		
Parameters (out)	LinkStatePtr	ETHTRCV_LINK_STATE_DOWN: transceiver is disconnected ETHTRCV_LINK_STATE_ACTIVE: transceiver is connected	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: transceiver could not be initialized	
Description	Obtains the link state of the indexed transceiver		
Available via	Ethlf.h		

[SWS_EthIf_00421] [The function EthIf_TransceiverGetLinkState shall forward the call to function <EthTrcv>_GetLinkState of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.11 Ethlf_TransceiverGetBaudRate

[SWS_EthIf_91112] Definition of API function EthIf_TransceiverGetBaudRate [

Service Name	EthIf_TransceiverGetBaudR	ate
Syntax	Std_ReturnType EthIf_TransceiverGetBaudRate (uint8 TrcvIdx, EthTrcv_BaudRateType* BaudRatePtr)	
Service ID [hex]	0x4e	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Transceiver Driver
Parameters (inout)	None	
Parameters (out)	BaudRatePtr	ETHTRCV_BAUD_RATE_10MBIT: 10MBit connection ETHTRCV_BAUD_RATE_100MBIT: 100MBit connection ETHTRCV_BAUD_RATE_1000MBIT: 1000MBit connection ETHTRCV_BAUD_RATE_2500MBIT: 2500MBit connection
Return value	Std_ReturnType	E_OK: success E_NOT_OK: transceiver could not be initialized
Description	Obtains the baud rate of the indexed transceiver	
Available via	Ethlf.h	

1

[SWS_EthIf_00426] [The function $EthIf_TransceiverGetBaudRate$ shall forward the call to function $EthTrcv_GetBaudRate$ of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).]

8.4.7.12 Ethlf_TransceiverGetDuplexMode

[SWS_EthIf_91114] Definition of API function EthIf_TransceiverGetDuplexMode

Service Name	EthIf_TransceiverGetDuplexMode	
Syntax	Std_ReturnType EthIf_TransceiverGetDuplexMode (uint8 TrcvIdx, EthTrcv_DuplexModeType* DuplexModePtr)	
Service ID [hex]	0x50	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Transceiver Driver
Parameters (inout)	None	

Parameters (out)	DuplexModePtr	ETHTRCV_DUPLEX_MODE_HALF: half duplex connections ETHTRCV_DUPLEX_MODE_FULL: full duplex connection
Return value	Std_ReturnType	E_OK: success E_NOT_OK: transceiver could not be initialized
Description	Obtains the duplex mode of the indexed transceiver	
Available via	Ethlf.h	

1

[SWS_EthIf_00430] [The function EthIf_TransceiverGetDuplexMode shall forward the call to function EthTrcv_GetDuplexMode of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).|

8.4.7.13 Ethlf_RunCableDiagnostic

[SWS_EthIf_91132] Definition of API function EthIf_RunCableDiagnostic [

Service Name	Ethlf_RunCableDiagnostic		
Syntax	Std_ReturnType EthI: uint8 TrcvIdx)	<pre>Std_ReturnType EthIf_RunCableDiagnostic (uint8 TrcvIdx)</pre>	
Service ID [hex]	0x62		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant Reentrant for di	Reentrant Reentrant for different Trcvldx. Non reentrant for the same Trcvldx.	
Parameters (in)	Trcvldx	Index of the Ethernet transceiver within the context of the Ethernet Transceiver Driver.	
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: The trigger has been accepted. E_NOT_OK: The trigger has not been accepted.	
Description	Trigger the cable diagnosti	Trigger the cable diagnostics for the given Ethernet transceiver.	
Available via	Ethlf.h		

[SWS_EthIf_00466] [If the function EthIf_RunCableDiagnostic is called, EthIf shall ensure that the corresponding EthIfController is in mode ETH_MODE_ACTIVE and forward the call to function EthTrcv_RunCableDiagnostic of the corresponding Ethernet Transceiver Driver (EthIfTransceiverIdx).

8.4.7.14 Ethlf_TransceiverGetMacMethod

[SWS_EthIf_91021] Definition of API function EthIf_TransceiverGetMacMethod

Upstream requirements: SRS_Eth_00117

Γ

Service Name	Ethlf_TransceiverGetMacMe	ethod	
Syntax	Std_ReturnType EthIf_TransceiverGetMacMethod (uint8* TrcvIdx, EthTrcv_MacMethodType* MacModePtr)		
Service ID [hex]	0x66		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Trcvldx	Index of the transceiver within the context of the Ethernet Transceiver Driver	
Parameters (inout)	None		
Parameters (out)	MacModePtr	ETHTRCV_MAC_TYPE_CSMA_CD: Carrier-sense multiple access with collicion detection. ETHTRCV_MAC_TYPE_PLCA: Physical layer collision avoidance.	
Return value	Std_ReturnType	E_OK: success. E_NOT_OK: transceiver request has not been accepted.	
Description	Obtains the media access mode of the transceiver.		
Available via	Ethlf.h		

[SWS Ethlf 00474]

Upstream requirements: SRS_Eth_00117

[The function $EthIf_TransceiverGetMacMethod$ shall forward the call to function $EthTrcv_GetMacMethod$ of the corresponding Ethernet Transceiver Driver (EthIf-TransceiverIdx).|

8.4.8 Wireless(CC2x)

8.4.8.1 Ethlf_GetBufWRxParams

[SWS_EthIf_91002] Definition of API function EthIf_GetBufWRxParams [

Service Name	EthIf_GetBufWRxParams		
Syntax	Std_ReturnType EthIf_GetBufWRxParams (uint8 CtrlIdx, const WEth_BufWRxParamIdType* RxParamIds, uint32* ParamValues, uint8 NumParams)		
Service ID [hex]	0x32		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	RxParamlds IDs of the Parameters to read		
	NumParams	Number of Parameters	
Parameters (inout)	None	None	
Parameters (out)	ParamValues	Values of the Parameters requested	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed reading parameters	
Description	Read out values related to the receive direction of the transceiver for a received packet. For example, this could be RSSI or Channel belonging to one single packet.		
Available via	Ethlf.h		

[SWS_EthIf_00341] [The function $EthIf_GetBufWRxParams$ shall forward the call to function $WEth_GetBufWRxParams$ of the respective Wireless Ethernet Controller Driver.]

[SWS_EthIf_00342] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.]

Note: The function requires previous reception (Ethlf RxIndication).

8.4.8.2 Ethlf_GetBufWTxParams

[SWS_EthIf_91054] Definition of API function EthIf_GetBufWTxParams \lceil

Service Name	EthIf_GetBufWTxParams		
Syntax	Std_ReturnType EthIf_GetBufWTxParams (uint8 CtrlIdx, const WEth_BufWTxParamIdType* TxParamIds, uint32* ParamValues, uint8 NumParams)		
Service ID [hex]	0x31		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	TxParamIds IDs of the Parameter that are requested		
	NumParams Number of Parameters that are requested		
Parameters (inout)	None		
Parameters (out)	ParamValues	Values of the Parameters requested	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed reading parameters	
Description	Read out values related to the transmit direction of the transceiver for a transmitted packet.		
Available via	Ethlf.h		

[SWS_EthIf_00347] [The function EthIf_GetBufWTxParams shall forward the call to function WEth_GetBufWTxParams of the respective Wireless Ethernet Controller Driver.]

[SWS_EthIf_00348] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.|

Note: The function requires previous transmission (Ethlf_Transmit).

8.4.8.3 Ethlf_SetBufWTxParams

[SWS_EthIf_91017] Definition of API function EthIf_SetBufWTxParams [

Service Name	EthIf_SetBufWTxParams		
Syntax	Std_ReturnType EthIf_SetBufWTxParams (uint8 CtrlIdx, const WEth_BufWTxParamIdType* TxParamIds, const uint32* ParamValues, uint8 NumParams)		
Service ID [hex]	0x33		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
	TxParamIds IDs of the Parameter that are provided to the transmit radio		
	ParamValues Values of the Parameters that are provided to the transmit radio		
	NumParams Number of Parameters that are provided to the transmit radio		
Parameters (inout)	None		
Parameters (out)	None	None	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed setting parameter	
Description	Set values related to the transmit direction of the transceiver for a specific buffer (packet to be sent). For example, this can be the desired transmit power or the channel belonging to one single packet.		
Available via	Ethlf.h		

[SWS_EthIf_00353] [The function $EthIf_SetBufWTxParams$ shall forward the call to function $WEth_SetBufWTxParams$ of the respective Wireless Ethernet Controller Driver.]

[SWS_EthIf_00354] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.|

8.4.8.4 Ethlf SetRadioParams

[SWS_EthIf_91026] Definition of API function EthIf_SetRadioParams [

Service Name	Ethlf_SetRadioParams	
Syntax	<pre>Std_ReturnType EthIf_SetRadioParams (uint8 TrcvId, const WEthTrcv_SetRadioParamIdType* ParamIds, const uint32* ParamValue, uint8 NumParams)</pre>	
Service ID [hex]	0x34	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Trcvld Index of the transceiver	
	Paramids	IDs of the Parameters to set
	ParamValue Values of the Parameters to set	
	NumParams Number of Parameters to set	
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed writing parameters
Description	Set values related to a transceiver's wireless radio. For example, this could be the selection of the radio settings (channel,).	
Available via	Ethlf.h	

1

[SWS_EthIf_00360] [The function $EthIf_SetRadioParams$ shall forward the call to function $WEthTrcv_SetRadioParams$ of the respective Wireless Ethernet Transceiver Driver.]

[SWS_EthIf_00361] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.|

8.4.8.5 Ethlf_SetChanRxParams

[SWS_EthIf_91034] Definition of API function EthIf_SetChanRxParams [

Service Name	Ethlf_SetChanRxParams		
Syntax	<pre>Std_ReturnType EthIf_SetChanRxParams (uint8 TrcvId, uint8 RadioId, const WEthTrcv_SetChanRxParamIdType* ParamIds, const uint32* ParamValues, uint8 NumParams)</pre>		
Service ID [hex]	0x35		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Trcvld Index of the transceiver		
	Radiold	Index of the Transceiver's Radio (including channel)	
	ParamIds IDs of the Parameters to set ParamValues Values of the Parameters to set		
	NumParams	Number of Parameters to set	
Parameters (inout)	None	None	
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed writing parameters	
Description	Set values related to the receive direction of a transceiver's wireless channel. For example, this could be a channel parameter like the frequency.		
Available via	Ethlf.h		

[SWS_EthIf_00366] [The function $EthIf_SetChanRxParams$ shall forward the call to function $WEthTrcv_SetChanRxParams$ of the respective Wireless Ethernet Transceiver Driver.]

[SWS_EthIf_00367] [The function EthIf_SetChanRxParams shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.|

8.4.8.6 Ethlf_SetChanTxParams

[SWS_EthIf_91042] Definition of API function EthIf_SetChanTxParams [

Service Name	Ethlf_SetChanTxParams	
Syntax	Std_ReturnType EthIf_SetChanTxParams (uint8 TrcvId, uint8 RadioId, const WEthTrcv_SetChanTxParamIdType* TxParamIds, const uint32* ParamValues, uint8 NumParams)	
Service ID [hex]	0x36	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Trcvld	Index of the transceiver
	Radiold	Index of the Transceiver's Radio (including channel)
	TxParamIds IDs of the Parameters to set	
	ParamValues Values of the Parameters to set	
	NumParams Number of Parameters to set	
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed writing parameters
Description	Set values related to the transmit direction of a transceiver's wireless channel. For example, this could be the bitrate of a channel.	
Available via	Ethlf.h	

1

[SWS_EthIf_00373] [The function $EthIf_SetChanTxParams$ shall forward the call to function $WEthTrcv_SetChanTxParams$ of the respective Wireless Ethernet Transceiver Driver.]

[SWS_EthIf_00374] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableWEthApi.]

8.4.8.7 Ethlf_GetChanRxParams

[SWS_EthIf_91050] Definition of API function EthIf_GetChanRxParams [

Service Name	Ethlf_GetChanRxParams		
Syntax	Std_ReturnType EthIf_GetChanRxParams (uint8 TrcvId, uint8 RadioId, const WEthTrcv_GetChanRxParamIdType* ParamIds, uint32* ParamValues, uint8 NumParams)		
Service ID [hex]	0x37		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Trcvld	Index of the transceiver	
	Radiold	Index of the Transceiver's Radio (including channel)	
	Paramids IDs of the Parameters to read NumParams Number of Parameters to read		
Parameters (inout)	None	None	
Parameters (out)	ParamValues	Values of the requested Parameters	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed reading parameters	
Description	Read values related to the receive direction of the transceiver. For example, this could be a Channel Busy Ratio (CBR) or the average Channel Idle Time (CIT).		
Available via	Ethlf.h		

1

[SWS_EthIf_00380] [The function $EthIf_GetChanRxParams$ shall forward the call to function $WEthTrcv_GetChanRxParams$ of the respective Wireless Ethernet Transceiver Driver.]

[SWS_EthIf_00381] [The function shall be pre compile time configurable On/Off by the configuration parameter: EthlfEnableWEthApi.]

8.4.8.8 Ethlf_GetBufCV2xPC5RxParams

[SWS_EthIf_91201] Definition of API function EthIf_GetBufCV2xPC5RxParams [

Service Name	Ethlf_GetBufCV2xPC5RxPa	arams
Syntax	<pre>Std_ReturnType EthIf_GetBufCV2xPC5RxParams (PduIdType PduId, const CV2x_BufCV2xPC5RxParamIdType* RxParamIds, uint16* ParamValues, uint8 NumParams)</pre>	
Service ID [hex]	0x3a	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld Ethernet Interface PDU ID	
	RxParamlds	IDs of the Parameters to read
	NumParams Number of Parameters	
Parameters (inout)	None	
Parameters (out)	ParamValues	Values of the Parameters requested
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed reading parameter
Description	Read out values related to the receive direction of the Cellular V2X for a received packet. For example, this could be CBR belonging to one single packet.	
Available via	Ethlf.h	

1

[SWS_EthIf_00521]

Status: DRAFT

The function EthIf_GetBufCV2xPC5RxParams shall forward the call to function CV2x_GetBufCV2xPC5RxParams of the respective Cellular V2X Driver.

[SWS Ethlf 00522]

Status: DRAFT

[The function EthIf_GetBufCV2xPC5RxParams shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableCV2xApi.]

Note: The function requires previous transmission (Ethlf_RxIndication).

8.4.8.9 Ethlf GetBufCV2xPC5TxParams

[SWS_EthIf_91202] Definition of API function EthIf_GetBufCV2xPC5TxParams

Service Name	EthIf_GetBufCV2xPC5TxPa	ırams
Syntax	Std_ReturnType EthIf_GetBufCV2xPC5TxParams (PduIdType PduId, const CV2x_BufCV2xPC5TxParamIdType* TxParamIds, uint16* ParamValues, uint8 NumParams)	
Service ID [hex]	0x3b	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Pduld Ethernet Interface PDU ID	
	TxParamlds	IDs of the Parameter to get
	NumParams Number of Parameters	
Parameters (inout)	None	
Parameters (out)	ParamValues	Values of the Parameters requested
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed reading parameter
Description	Read out values related to the transmit direction of the Cellular V2X for a transmitted packet. For example, this could be transaction ID belonging to one single packet.	
Available via	Ethlf.h	

[SWS Ethlf 00531]

Status: DRAFT

The function EthIf_GetBufCV2xPC5TxParams shall forward the call to function CV2x_GetBufCV2xPC5TxParams of the respective Cellular V2X Driver.

[SWS_EthIf_00532]

Status: DRAFT

The function EthIf_GetBufCV2xPC5TxParams shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableCV2xApi.

Note: The function requires previous transmission (Ethlf_Transmit).

8.4.8.10 Ethlf SetBufCV2xPC5TxParams

[SWS_EthIf_91203] Definition of API function EthIf_SetBufCV2xPC5TxParams

Service Name	EthIf_SetBufCV2xPC5TxPa	rams	
Syntax	Std_ReturnType EthIf_SetBufCV2xPC5TxParams (PduIdType PduId, const CV2x_BufCV2xPC5TxParamIdType* TxParamIds, const uint16* ParamValues, uint8 NumParams)		
Service ID [hex]	0x3c		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Pduld	Ethernet Interface PDU ID	
	TxParamlds	IDs of the Parameter to set	
	ParamValues Value of the Parameter to set NumParams Number of Parameters		
Parameters (inout)	None	None	
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed setting parameter	
Description	Set values related to the transmit direction of the Cellular V2X for a specific buffer (packet to be sent). For example, this can be the desired ProSe per-packet priority belonging to one single packet.		
Available via	Ethlf.h		

[SWS_EthIf_00541]

Status: DRAFT

The function EthIf_SetBufCV2xPC5TxParams shall forward the call to function CV2x_SetBufCV2xPC5TxParams of the respective Cellular V2X Driver.

[SWS_EthIf_00542]

Status: DRAFT

[The function EthIf_SetBufCV2xPC5TxParams shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableCV2xApi.]

8.4.8.11 Ethlf_GetChanCV2xPC5TxParams

[SWS_EthIf_91204] Definition of API function EthIf_GetChanCV2xPC5TxParams

Service Name	Ethlf_GetChanCV2xPC5Tx	xParams	
Syntax	uint8 CtrlId, uint8 ChannelId, const CV2x_GetChan	uint8 ChannelId, const CV2x_GetChanTxParamIdType* ParamIds, uint32* ParamValues,	
Service ID [hex]	0x3d		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Ctrlld	Index of the controller within the context of the Cellular V2X Driver (Transceiver Id)	
	Channelld	Index of Transceiver's Radio Channel	
	Paramids	Paramids IDs of the Parameters to read	
	NumParams	Number of parameters to read	
Parameters (inout)	None		
Parameters (out)	ParamValues	Value of the requested Parameters	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: failed setting parameter	
Description	Read values related to the Channel Busy Ratio(CBR)	Read values related to the receive direction of the channel. For example, this could be a Channel Busy Ratio(CBR)	
Available via			

[SWS_EthIf_00551]

Status: DRAFT

[The function $EthIf_GetChanCV2xPC5TxParams$ shall forward the call to function $Cv2x_GetChanTxParams$ of the respective Cellular V2X Driver.]

[SWS_EthIf_00552]

Status: DRAFT

[The function Ethlf_GetChanCV2xPC5TxParams shall be pre compile time configurable On/Off by the configuration parameter: EthlfEnableCV2xApi.]

8.5 Callback notifications

This is a list of functions provided for other modules.

8.5.1 Ethlf_RxIndication

[SWS_EthIf_00085] Definition of API function EthIf_RxIndication

Upstream requirements: SRS_Eth_00169

Γ

Service Name	EthIf_RxIndication		
Syntax	<pre>void EthIf_RxIndication (uint8 CtrlIdx, Eth_FrameType FrameType, boolean IsBroadcast, const uint8* PhysAddrPtr, const Eth_DataType* DataPtr, uint16 DataLen, TimeTupleType* IngressTimeTuplePtr, Eth_BufIdxType RxHandleId)</pre>		
Service ID [hex]	0x10		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the physical Ethernet controller within the context of the Ethernet Interface	
	FrameType	Frame type of received Ethernet frame	
	IsBroadcast	parameter to indicate a broadcast frame	
	PhysAddrPtr Pointer to Physical source address (MAC address in netwo order) of received Ethernet frame		
	DataPtr	Pointer to payload of received Ethernet frame.	
	DataLen	Length (bytes) of the payload in received frame.	
	IngressTimeTuplePtr	Pointer to ingress timestamp provided as time tuple	
	RxHandleld	Unique receive handle id provided by the Ethernet Driver, to identify the ingress queue element per physical Ethernet controller	
Parameters (inout)	None	None	
Parameters (out)	None		
Return value	None		
Description	Receive indication of an Ethernet frame which was received by the indexed controller		
Available via	Ethlf.h		

[SWS_EthIf_00151] [The Ethernet Driver shall indicate broadcast message with the parameter IsBroadcast to the Ethernet Interface.]

[SWS_EthIf_00145] [If the VLAN is not active the Ethernet Interface shall increment the corresponding measurement data and filter the message |

8.5.2 Ethlf_TxConfirmation

[SWS_EthIf_00091] Definition of API function EthIf_TxConfirmation [

Service Name	EthIf_TxConfirmation	
Syntax	<pre>void EthIf_TxConfirmation (uint8 CtrlIdx, Eth_BufIdxType BufIdx, Std_ReturnType Result)</pre>	
Service ID [hex]	0x11	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Ctrlldx	Index of the physical Ethernet controller within the context of the Ethernet Interface
	Bufldx Index of the transmitted buffer	
	Result E_OK: The transmission was successful, E_NOT_OK: The transmission failed.	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Confirms frame transmission by the indexed controller	
Available via	Ethlf.h	

[SWS_EthIf_00255] [EthIf_TxConfirmation shall pass the Result received within EthIf_TxConfirmation to the configured upper layer via $\$ UL>_TxConfirmation.]

8.5.3 Ethlf CtrlModeIndication

[SWS_EthIf_00231] Definition of callback function EthIf_CtrlModeIndication [

Service Name	EthIf_CtrlModeIndication	
Syntax	<pre>void EthIf_CtrlModeIndication (uint8 CtrlIdx, Eth_ModeType CtrlMode)</pre>	
Service ID [hex]	0x0e	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant for the same Ctrlldx, reentrant for different	
Parameters (in)	Ctrlldx	Index of the physical Ethernet controller within the context of the Ethernet Interface
	CtrlMode	Notified Ethernet controller mode
Parameters (inout)	None	

Parameters (out)	None
Return value	None
Description	Called asynchronously when mode has been read out. Triggered by previous <ethdrv>_Set ControllerMode call. Can directly be called within the trigger functions.</ethdrv>
Available via	Ethlf.h

[SWS_EthIf_00252] [The function shall call EthSM_CtrlModeIndication.]

8.5.4 Ethlf_TrcvModeIndication

[SWS_EthIf_00232] Definition of callback function EthIf_TrcvModeIndication \lceil

Service Name	EthIf_TrcvModeIndication		
Syntax	uint8 TrcvIdx,	<pre>void EthIf_TrcvModeIndication (uint8 TrcvIdx, Eth_ModeType TrcvMode)</pre>	
Service ID [hex]	0x0f		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant for the same	Non Reentrant for the same Ctrlldx, reentrant for different	
Parameters (in)	Trevldx	Index of the Ethernet transceiver within the context of the Ethernet Interface	
	TrcvMode Notified Ethernet transceiver mode		
Parameters (inout)	None	None	
Parameters (out)	None	None	
Return value	None		
Description		Called asynchronously when a mode change has been read out. If the function is triggered by previous call of EthTrcv_SetTransceiverMode it can directly be called within the trigger function.	
Available via	Ethlf.h		

١

8.5.5 Ethlf_SwitchPortModeIndication

[SWS_EthIf_91055] Definition of API function EthIf_SwitchPortModeIndication [

Service Name	Ethlf_SwitchPortModeIndica	ation
Syntax	<pre>void EthIf_SwitchPortModeIndication (uint8 SwitchIdx, uint8 SwitchPortIdx, Eth_ModeType PortMode)</pre>	
Service ID [hex]	0x46	
Sync/Async	Asynchronous	
Reentrancy	Non Reentrant	
Parameters (in)	SwitchIdx Index of the switch within the context of the Ethernet Switch Dri	
	SwitchPortIdx	Index of the port at the addressed switch.
	PortMode	Notified Ethernet Switch port mode.
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	The Ethlf shall determine the expected notifications based on the EthSwtPort configuration. In case the EthSwtPort references an EthTrcv the Ethlf expects a notification from the EthTrcv via API Ethlf_TrcvModeIndication(). Otherwise the Ethlf expects a notification from the EthSwt via API Ethlf_SwitchPortModeIndication()	
Available via	Ethlf.h	

8.5.6 Ethlf_SleepIndication

[SWS_EthIf_91006] Definition of API function EthIf_SleepIndication

Status: DRAFT

Upstream requirements: SRS_Eth_00156

Γ

Service Name	EthIf_SleepIndication (draft)	
Syntax	<pre>void EthIf_SleepIndication (uint8 TrcvIdx)</pre>	
Service ID [hex]	0x68	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	Trcvldx Index of the Ethernet transceiver within the context of the Ethernet Interface	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	

Description	This API is called by the corresponding EthTrcv, if a sleep indication was detected on the network. This could be used e.g. for Ethernet hardware which is compliant to the OA TC10. In this case the Ethernet hardware (PHY) detect an Sleep.Indication which was triggered by a Sleep.Request of the connected link partner. Tags: atp.Status=draft
Available via	Ethlf.h

1

[SWS Ethlf 00497]

Status: DRAFT

Upstream requirements: SRS_Eth_00156

[The function shall call EthSM_SleepIndication with the corresponding EthIfCtrl.]

8.5.7 Ethlf_StreamStateIndication

[SWS_EthIf_91024] Definition of callback function EthIf_StreamStateIndication

Status: DRAFT

Upstream requirements: FO_RS_Fw_00011

Γ

Service Name	Ethlf_StreamStateIndicat	Ethlf_StreamStateIndication (draft)		
Syntax	uint8 SwitchIdx, uint8 StreamHandl	<pre>void EthIf_StreamStateIndication (uint8 SwitchIdx, uint8 StreamHandleIdxPtr, boolean StreamActivityStatus)</pre>		
Service ID [hex]	0x93	0x93		
Sync/Async	Synchronous	Synchronous		
Reentrancy	Reentrant	Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver		
	StreamHandleldxPtr	Pointer to the StreamHandleldx for which the current status is returned		
	StreamActivityStatus	Activity status of the StreamHandleIdx (True = active, False = inactive)		
Parameters (inout)	None	None		
Parameters (out)	None	None		
Return value	None	None		
Description	activity status in the Ether SetStreamState.	The function is called by the EthSwt driver module once it has successfully set the streams activity status in the Ethernet switch given with SwitchIdx, triggered by a previous call of EthIf_SetStreamState.		
	Tags: atp.Status=draft	Tags: atp.Status=draft		
Available via	Ethlf_Cbk.h	Ethlf_Cbk.h		

1

8.5.8 Ethlf StreamStatisticsIndication

[SWS_EthIf_91023] Definition of callback function EthIf_StreamStatisticsIndication

Status: DRAFT

Upstream requirements: FO_RS_Fw_00011

Γ

Service Name	Ethlf_StreamStatisticsIndic	cation (draft)		
Syntax	uint8 SwitchIdx, uint8 NumberOfBuc	<pre>void EthIf_StreamStatisticsIndication (uint8 SwitchIdx, uint8 NumberOfBuckets, const Eth_StreamStatisticCounterType* ListOfBucketsPtr)</pre>		
Service ID [hex]	0x94	0x94		
Sync/Async	Synchronous	Synchronous		
Reentrancy	Reentrant	Reentrant		
Parameters (in)	Switchldx	Index of the switch within the context of the Ethernet Switch Driver		
	NumberOfBuckets	Number of counting buckets in the switch		
	ListOfBucketsPtr Pointer to the bucket counter values			
Parameters (inout)	None	None		
Parameters (out)	None	None		
Return value	None	None		
Description		The function is called by the lower layer once it has successfully retrieved the stream statistics (i.e. bucket counter values) from the EthSwt driver given with Switchldx.		
	Tags: atp.Status=draft	Tags: atp.Status=draft		
Available via	Ethlf_Cbk.h	Ethlf_Cbk.h		

8.5.9 EthIf_SwitchMacSecGetMacSecStatisticsNotification

[SWS_EthIf_91234] Definition of callback function EthIf_SwitchMacSecGetMac SecStatisticsNotification

Status: DRAFT

Γ

Service Name	EthIf_SwitchMacSecGetMacSecStatisticsNotification (draft)
Syntax	<pre>void EthIf_SwitchMacSecGetMacSecStatisticsNotification (const EthSwt_MgmtInfoType* MgmtInfoPtr)</pre>
Service ID [hex]	0x7c
Sync/Async	Asynchronous
Reentrancy	Reentrant for different MgmtInfoPtr, Non reentrant for the same MgmtInfoPtr

Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	MgmtInfoPtr	Pointer to the management information within the context of an Ethernet Switch Driver. SwitchIdx in context of the EthIf (EthIf Switch/EthIfSwitchIdx), PortIdx in context of EthSwt (EthSwtPort/EthSwtPortIdx).
Return value	None	
Description	Callback to notify that EthSwt_MacSecGetMacSecStatistics has finished and provide the requested statistics.	
	Tags: atp.Status=draft	
Available via	Ethlf.h	

Ī

8.5.10 Ethlf_MacSecGetMacSecStatisticsNotification

[SWS_EthIf_91235] Definition of callback function EthIf_MacSecGetMacSec StatisticsNotification

Status: DRAFT

Γ

Service Name	EthIf_MacSecGetMacSecStatisticsNotification (draft)		
Syntax	<pre>void EthIf_MacSecGetMacSecStatisticsNotification (uint8 CtrlIdx)</pre>		
Service ID [hex]	0x7d		
Sync/Async	Synchronous		
Reentrancy	Reentrant for different Ctrlldx, Non reentrant for the same Ctrlldx		
Parameters (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Interface	
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Callback to notify that EthTrcv_MacSecGetMacSecStatistics has finished and provide the requested statistics.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

ı

8.6 Scheduled functions

These functions are directly called by Basic Software Scheduler. The following functions shall have no return value and no parameter. All functions shall be non reentrant.

8.6.1 Ethlf MainFunctionRx

[SWS_EthIf_00097] Definition of scheduled function EthIf_MainFunctionRx [

Service Name	EthIf_MainFunctionRx	
Syntax	<pre>void EthIf_MainFunctionRx (void)</pre>	
Service ID [hex]	0x20	
Description	The function checks for new received frames and issues reception indications in polling mode.	
Available via	SchM_Ethlf.h	

1

[SWS_EthIf_00099] [The receive frame check shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableRxInterrupt.]

8.6.2 Ethlf_MainFunctionRx_<PriorityProcessing ShortName>

[SWS_EthIf_91051] Definition of scheduled function EthIf_MainFunction Rx <PriorityProcessing ShortName>

Status: OBSOLETE

Γ

Service Name	EthIf_MainFunctionRx_ <priorityprocessing shortname=""> (obsolete)</priorityprocessing>		
Syntax	<pre>void EthIf_MainFunctionRx_<priorityprocessing shortname=""> (void)</priorityprocessing></pre>		
Service ID [hex]	0x42		
Description	The function checks for new received frames at the related Ethernet controller or CanXL controller and reception queue by calling <ethdrv>_Receive() with the respective Fifoldx. Eth If_MainFunctionRx shall receive frames from all FIFOs that are not assigned for processing via EthIfPhysCtrlRxMainFunctionPriorityProcessing. Tags: atp.Status=obsolete</ethdrv>		
Available via	Ethlf_SchM.h		

1

8.6.3 Ethlf_MainFunctionRx_<IngressQueueProcessing ShortName>

[SWS_EthIf_91139] Definition of scheduled function EthIf_MainFunction Rx <IngressQueueProcessing ShortName>

Status: DRAFT

Upstream requirements: SRS Eth 00170

Γ

Service Name	EthIf_MainFunctionRx_ <ingressqueueprocessing shortname=""> (draft)</ingressqueueprocessing>		
Syntax	<pre>void EthIf_MainFunctionRx_<ingressqueueprocessing shortname=""> (void)</ingressqueueprocessing></pre>		
Service ID [hex]	0x9c		
Description	The function checks for new received Ethernet frames at the related Ethernet controller and the related ingress queue referenced via EthIfPhysCtrlRxIngressQueueRef, or at the related Can XL controller and the related ingress FIFO referenced via EthIfCanXLCtrlRxIngressFifoRef. In case of Ethernet controller calling Eth_Receive() with the respective Queueldx. In case of Can XL controller calling CanXL_Receive() with the respective Fifoldx.		
	Tags: atp.Status=draft		
Available via	Ethlf.h		

1

8.6.4 Ethlf_MainFunctionTx

[SWS_EthIf_00113] Definition of scheduled function EthIf_MainFunctionTx [

Service Name	EthIf_MainFunctionTx	
Syntax	<pre>void EthIf_MainFunctionTx (void)</pre>	
Service ID [hex]	0x21	
Description	The function issues transmission confirmations in polling mode. It checks also for transceiver state changes.	
Available via	SchM_Ethlf.h	

١

[SWS_EthIf_00100] [The transmission confirmation check shall be pre compile time configurable On/Off by the configuration parameter: EthIfEnableTxInterrupt.]

[SWS_EthIf_00101] [The frequency of polling the transceiver state change shall be configurable by the configuration parameter: EthIfTrcvLinkStateChgMain-Reload.]

8.6.5 Ethlf MainFunctionState

[SWS_EthIf_91104] Definition of scheduled function EthIf_MainFunctionState [

Service Name	EthIf_MainFunctionState	
Syntax	<pre>void EthIf_MainFunctionState (void)</pre>	
Service ID [hex]	0x05	
Description	The function is polling different communication hardware (Ethernet transceiver, Ethernet switch ports) related information, e.g. link state, signal quality.	
Available via	Ethlf_SchM.h	

1

[SWS_EthIf_00407] [The function EthIf_MainFunctionState shall poll Ethernet communication hardware related information with the period of EthIfMainFunction-StatePeriod.]

[SWS_EthIf_00408] [For each Ethernet switch port where a link state ETHTRCV_-LINK_STATE_ACTIVE is yielded and references an Ethernet Transceiver the function shall poll the signal quality by calling EthSwt_GetPortSignalQuality.|

[SWS_EthIf_00409] [For each Ethernet transceiver where a link state of ETHTRCV_-LINK_STATE_ACTIVE is yielded the function shall poll the signal quality by calling EthTrcv_GetPhySignalQuality.]

[SWS_EthIf_00410] [The obtained signal quality value shall be stored as type of EthIf_SignalQualityResultType. The value shall always be stored as ActualSignalQuality. If the obtained signal quality is higher than the stored highest signal quality (HighestSignalQuality), then HighestSignalQuality shall be updated with the obtained signal quality. If the obtained signal quality is lower than the lowest signal quality (LowestSignalQuality), then LowestSignalQuality shall be updated with the obtained signal quality.

[SWS_EthIf_00498] [EthIf shall check its maintained Ethernet hardware (Ethernet switch port, Ethernet transceiver), if the Ethernet hardware has reached the requested mode and requested link state under the following conditions:

- the timer to switch off the EthSwtPort (see EthIfSwitchOffPortTimeDelay) is not running AND
- the timer to keep the EthSwtPort in ETH_MODE_ACTIVE (see EthIfPortStartu-pActiveTime) is not running and the EthSwtPort has not been requested with ETH MODE ACTIVE

If EthIf detects that the requested mode and / or requested link state has not reached, EthIf shall re-trigger the requested mode and link state, respectively.]

Note:

- This shall ensure to re-trigger a wake-up on the network, if e.g. OA TC10 compliant hardware is used (see [5, OPEN Sleep/Wake-up Specification for Automotive Ethernet]).
- 2. Additionally, the check shall not try to re-establish a requested mode if the timer to switch off the EthSwtPort (requested via EthIfSwitchOffPortTimeDelay) or the timer to keep the EthSwtPort active (requested via EthIfPortStartupActiveTime) is running. Switching-off of the Ethernet hardware in an Ethernet switched network after EthIfSwitchOffPortTimeDelay expires, lead to a situation that an Ethernet switch port and the connected Ethernet hardware (PHY) of the link partner are not synchronized. Thus, first the connected PHY will be switched off and after EthIfSwitchOffPortTimeDelay the Ethernet switch port. This is acceptable since the network management has already confirmed to go to sleep. For example, if using OA TC10 compliant Ethernet hardware, the ECU which is connected to the Ethernet switch trigger a Sleep. Request on the network and bring the connected Ethernet switch ports and its own Ethernet hardware to sleep mode, due to the specified OA TC10 synchronized shutdown of the Ethernet hardware. Thus, the ECU that maintain the Ethernet switch may detect a link down on the affected Ethernet switch port, which should be ignored by the Ethlf, if the switch-off of the Ethernet switch port was already triggered but not forwarded to the Ethernet switch.

[SWS_EthIf_00499]

Status: DRAFT

Upstream requirements: SRS Eth 00156

[For EthIfTransceiver where the referenced EthTrcv is acting as a passive communication slave (EthTrcvActAsSlavePassiveEnabled set to TRUE), EthIf shall check for unexpected link down. If an unexpected link down (link state is requested with ETHTRCV_LINK_STATE_ACTIVE, but current link state is ETHTRCV_LINK_STATE_-DOWN) lasts as long as specified in EthIfQualifiedUnexptecedLinkDownTime, EthIf shall trigger to release the affected communication channel by calling EthSM_SleepIndication. If an unexpected link down was detected, the EthSM shall immediatedly be indicated via EthSM_TrcvLinkStateChg without considering EthIfQualifiedUnexpectedLinkDownTime.]

Note: [SWS_EthIf_00499] should grant that a communication channel that act as an passive communication channel will shutdown even though the communication master could not transmit a sleep over the network (e.g. hardware failure, unexpected shutdown of the ECU that act as communication master, a.s.o).

8.7 Expected interfaces

In this chapter all interfaces required from other modules are listed.

8.7.1 Mandatory interfaces

Note: This section defines all interfaces, which are required to fulfill the core functionality of the module.

[SWS_EthIf_00102] Definition of mandatory interfaces required by module EthIf

API Function	Header File	Description
There are no mandatory interfaces.		

I

8.7.2 Optional interfaces

This section defines all interfaces, which are required to fulfill an optional functionality of the module.

[SWS_EthIf_00103] Definition of optional interfaces requested by module EthIf [

API Function	Header File	Description
BswM_EthIf_PortGroupLinkStateChg	BswM_EthIf.h	Function called by Ethlf to indicate the link state change of a certain Ethernet switch port group.
CanXL_GetControllerMode	CanXL.h	Obtains the communication state of the indexed controller
CanXL_GetPhysAddr	CanXL.h	Obtains the physical source address used by the indexed controller
CanXL_ImmediateTransmit (draft)	CanXL.h	Request transmission of an Ethernet frame, where each upper layer a header part as element of a single linked list. All headers together with the payload form an entire Ethernet frame Tags: atp.Status=draft
CanXL_ProvideTxBuffer	CanXL.h	Provides access to a transmit buffer of the queue related to the specified priority
CanXL_Receive	CanXL.h	Receive a frame from the related queue.
CanXL_ReleaseRxBuffer (draft)	CanXL.h	Indication from the upper layer to release the reception buffer (ingress queue element) of the given physical Ethernet controller.
		Tags: atp.Status=draft
CanXL_SetControllerMode	CanXL.h	Enables / Disables Rx/Tx communication of the indexed controller

API Function	Header File	Description
CanXL_Transmit	CanXL.h	Triggers transmission of a previously filled transmit buffer
CanXL_TxConfirmation	CanXL.h	Triggers frame transmission confirmation
CanXLTrcv_GetLinkState	CanXLTrcv.h	Obtains the link state of the indexed transceiver
CanXLTrcv_GetTransceiverMode	CanXLTrcv.h	Obtains the state of the indexed transceiver
CanXLTrcv_SetTransceiverMode	CanXLTrcv.h	Enables / disables the indexed transceiver
CV2x_GetBufCV2xPC5RxParams (draft)	CV2x.h	Read out values related to a received packet. For example, this could be CBR to one single packet. This API is valid only within the context of CV2x_Receive
		Tags: atp.Status=draft
CV2x_GetBufCV2xPC5TxParams (draft)	GV2x.h	Read out values related to the receive direction for a transmitted packet. For example, this could be transaction ID to one single packet. This API is valid only within the context of CV2x_TxConfirmation
		Tags: atp.Status=draft
CV2x_GetChanCV2xPC5TxParams (draft)	CV2x.h	Read values related to the receive direction of the channel. For example, this could be a Channel Busy Ratio (CBR)
		Tags: atp.Status=draft
CV2x_SetBufCV2xPC5TxParams (draft)	CV2x.h	Set values related to the transmit direction for a specific buffer (packet to be sent). For example, this can be PPPP belonging to one single packet.
		Tags: atp.Status=draft
Eth_GetControllerMode	Eth.h	Obtains the communication state of the indexed controller
Eth_GetCurrentTimeTuple (draft)	Eth.h	Reads the time tuple of the current time of the timestamp clock and the current time of the PHC in an atomic operation. If no PHC is supported, the PHC value will be a copy of the timestamp clock value.
		Tags: atp.Status=draft
Eth_GetPhcTime (draft)	Eth.h	Returns the current time value out of the HW registers of the PHC.
		Tags: atp.Status=draft
Eth_GetPhysAddr	Eth.h	Obtains the physical source address used by the indexed controller
Eth_ImmediateTransmit (draft)	Ethlf.h	Request transmission of an Ethernet frame, where each upper layer a header part as element of a single linked list. All headers together with the payload form an entire Ethernet frame
		Tags: atp.Status=draft
Eth_ProvideTxBuffer	Eth.h	Provides access to a transmit buffer of the queue related to the specified priority
Eth_ReadMii	Eth.h	Reads a transceiver register
Eth_Receive	Eth.h	Receive a frame from the related queue.
Eth_ReleaseRxBuffer (draft)	Ethlf.h	Indication from the upper layer to release the reception buffer (ingress queue element) of the given physical Ethernet controller. Tags: atp.Status=draft
Eth SetControllerMode	Eth.h	Enables / Disables Rx/Tx communication of the
LII_SelConilollenvioue		indexed controller

	Δ	
API Function	Header File	Description
Eth_SetPhcCorrection (draft)	Eth.h	Sets PHC parameters to adapt rate and offset of the PHC.
		Tags: atp.Status=draft
Eth_SetPhcTime (draft)	Eth.h	Sets the absolute time of the PHC.
		Tags: atp.Status=draft
Eth_SetPpsSignalMode (draft)	Eth.h	Enables/disables the generation of a PPS signal
		Tags: atp.Status=draft
Eth_Transmit	Eth.h	Triggers transmission of a previously filled transmit buffer
Eth_TxConfirmation	Eth.h	Triggers frame transmission confirmation
Eth_WriteMii	Eth.h	Configures a transceiver register or triggers a function offered by the receiver
EthSM_CtrlModeIndication	EthSM.h	Called when mode has been read out. Either triggered by previous Ethlf_GetControllerMode or by Ethlf_SetControllerMode call. Can directly be called within the trigger functions.
EthSM_SleepIndication (draft)	EthSM.h	This API is called by the EthIf and indicate that a sleep indication was detected on the network. This API is only called if the ECU is acting as a passive communication slave on the corresponding communication channel (the referenced EthTrcv of the affected EthIfTransceiver has set EthTrcvActAs SlavePassiveEnabled to TRUE). This could be used e.g. for Ethernet hardware which is compliant to the OA TC10. In this case the Ethernet hardware detect an Sleep.Indication which was triggered by a Sleep.Request of the connected link partner.
		Tags: atp.Status=draft
EthSM_TrcvLinkStateChg	EthSM.h	This service is called by the Ethernet Interface to report a transceiver link state change.
EthSwt_ExtractStreamHandleIdx (draft)	EthSwt.h	Extracts the StreamHandleldx from the switch vendor specific part of the network packet header
		Tags: atp.Status=draft
EthSwt_GetStreamStatistics (draft)	EthSwt.h	Requests the statistics (bucket counter values) of an Ethernet switch of all configured streams.
		Tags: atp.Status=draft
EthSwt_PortEnableTimeStamp	EthSwt.h	Activates egress time stamping on a dedicated message object on a dedicated port of a Switch if EthSwtPortTimeStampSupport is set to TRUE for this port. The selective activation of dedicated message objects for time stamping reduces the number of notification calls only to the required calls. Some HW does store once the egress time stamp marker and some HW needs it always before transmission. There will be no disabled functionality, due to the fact, that the message type is always "time stamped" by network design.
EthSwt_SetMgmtInfo	EthSwt.h	Extends the Ethernet frame prepared previously by EthSwt_EthTxPrepareFrame() with the management information to achieve transmission only on specific ports.

API Function	Header File	Description	
EthSwt_SetStreamState (draft)	EthSwt.h	This function is called by an upper layer application (e.g. diagnostic application) via the EthIf module to control the activity status of a configured stream (given with StreamHandleldx) within an dedicated Ethernet switch (given with Switchldx).	
		Tags: atp.Status=draft	
EthTrcv_GetBaudRate	EthTrcv.h	Obtains the baud rate of the indexed transceiver	
EthTrcv_GetDuplexMode	EthTrcv.h	Obtains the duplex mode of the indexed transceiver	
EthTrcv_GetLinkState	EthTrcv.h	Obtains the link state of the indexed transceiver	
EthTrcv_GetTransceiverMode	EthTrcv.h	Obtains the state of the indexed transceiver	
EthTrcv_SetTransceiverMode	EthTrcv.h	Enables / disables the indexed transceiver	
EthTrcv_StartAutoNegotiation	EthTrcv.h	Restarts the negotiation of the transmission parameters used by the indexed transceiver	
Fw_StreamStateIndication (draft)	Fw_Cbk.h	The function is called by the Ethlf once it has successfully set the StreamHandleldx in the switch.	
		Tags: atp.Status=draft	
Fw_StreamStatisticsIndication (draft)	Fw_Cbk.h	The function is called by the lower layer once it has successfully retrieved the stream statistics (i.e. bucket counter values) from the EthSwt driver given with SwitchIdx	
		Tags: atp.Status=draft	
ldsM_SetSecurityEvent (obsolete)	ldsM.h	This API is the application interface to report security events to the IdsM.	
		Tags: atp.Status=obsolete	
ldsM_SetSecurityEventWithContext Data (obsolete)	ldsM.h	This API is the application interface to report security events with context data to the IdsM.	
		Tags: atp.Status=obsolete	
LSduR_EthIfRxIndication (draft)	LSduR_EthIf.h	Indication of a received PDU from a lower layer communication interface module.	
LSduR_EthlfTriggerTransmit (draft)	LSduR_Ethlf.h	Within this API, the upper layer module (called module) shall check whether the available data fits into the buffer size reported by PduInfoPtr->Sdu Length. If it fits, it shall copy its data into the buffer provided by PduInfoPtr->SduDataPtr and update the length of the actual copied data in PduInfoPtr->Sdu Length. If not, it returns E_NOT_OK without changing PduInfoPtr.	
LSduR_EthIfTxConfirmation (draft)	LSduR_Ethlf.h	The lower layer communication interface module confirms the transmission of a PDU, or the failure to transmit a PDU.	
WEth_GetBufWRxParams	WEth.h	Read out values related to the receive direction for a received packet. For example, this could be RSSI or Channel belonging to one single packet. This API is valid only within the context of WEth_Receive	
WEth_GetBufWTxParams	WEth.h	Read out values related to the transmit direction for a transmitted packet. This API is valid only within the context of WEth_TxConfirmation.	
WEth_SetBufWTxParams	WEth.h	Set values related to the transmit direction for a specific buffer (packet to be sent). For example, this can be the desired transmit power or the channel belonging to one single packet.	

API Function	Header File	Description
WEthTrcv_GetChanRxParams	WEthTrcv.h	Read values related to the receive direction of the transceiver. For example, this could be a Channel Busy Ratio (CBR) or the average Channel Idle Time (CIT).
WEthTrcv_SetChanRxParams	WEthTrcv.h	Set values related to the receive direction of a transceiver's wireless channel.For example, this could be a channel parameter like the frequency.
WEthTrcv_SetChanTxParams	WEthTrcv.h	Set values related to the transmit direction of a transceiver's wireless channel. For example, this could be the bitrate of a channel.
WEthTrcv_SetRadioParams	WEthTrcv.h	Set values related to a transceiver's wireless radio. For example, this could be the selection of the radio settings (channel,).

1

8.7.3 Configurable interfaces

In this section, all interfaces are listed where the target function could be configured. The target function is usually a callback function. The names of this kind of interfaces are not fixed because they are configurable.

Terms and definitions:

Reentrant interface is reentrant

Don't care reentrancy of interface not relevant for this module (in general it is in this case not reentrant).

[SWS_EthIf_00108] Definition of configurable interface <User>_TrcvLinkState Chg \lceil

Service Name	<user>_TrcvLinkStateChg</user>		
Syntax	<pre>void <user>_TrcvLinkStateChg (uint8 CtrlIdx, EthTrcv_LinkStateType TrcvLinkState)</user></pre>		
Sync/Async	Synchronous		
Reentrancy	Don't care		
Parameters (in)	Ctrlldx Index of the Ethernet controller within the context of the Ether Interface		
	TrcvLinkState ETHTRCV_LINK_STATE_DOWN transceiver link is down ETHTRCV_LINK_STATE_ACTIVE transceiver link is up		
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Indicates the change of a tra	Indicates the change of a transceiver state	

Available via	configurable

[SWS_EthIf_00109] [The callback function shall be configurable by the configuration parameter: EthIfTrcvLinkStateChgFunction.]

[SWS_EthIf_00230] [Upon change of the physical link state <user>_Tr-cvLinkStateChg shall be invoked for every affected EthIfController.|

Note: This means that <User>_TrcvLinkStateChg can be called independent of the according EthIfController mode when more than one EthIfController is bound to the same physical channel.

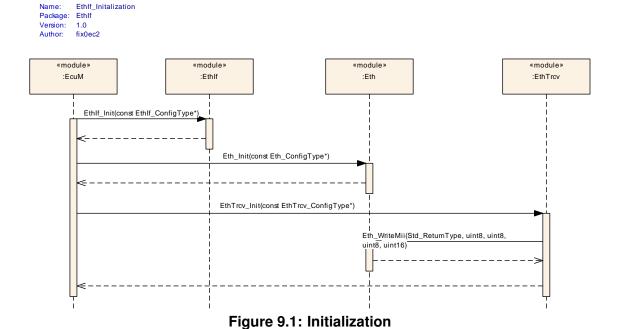

9 Sequence diagrams

The sequence diagrams show the basic operations carried out during operation. They show the interaction of the Ethernet Interface with upper layer BSW module and the underlying Ethernet Controller Driver.

Please note that the sequence diagrams are an extension for illustrational purposes to ease understanding of the specification.

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module Ethernet Interface.

Chapter 10.3 specifies published information of the module Ethernet Interface.

10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS BSWGeneral [6].

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapter 7 and Chapter 8.

10.2.1 Ethlf

[ECUC_EthIf_00049] Definition of EcucModuleDef EthIf [

Module Name	Ethlf	
Description	Configuration of the EthIf (Ethernet Interface) module.	
Post-Build Variant Support	true	
Supported Config Variants	VARIANT-LINK-TIME, VARIANT-POST-BUILD, VARIANT-PRE-COMPILE	

Included Containers		
Container Name	Multiplicity	Scope / Dependency
EthlfConfigSet	1	Collecting container for all parameters with post-build configuration classes.
EthIfGeneral	1	This container contains the general configuration parameters of the Ethernet Interface.

١

10.2.2 EthlfGeneral

[ECUC_EthIf_00001] Definition of EcucParamConfContainerDef EthIfGeneral

Container Name	EthlfGeneral
Parent Container	Ethlf
Description	This container contains the general configuration parameters of the Ethernet Interface.
Configuration Parameters	

Included Parameters		
Parameter Name	Multiplicity	ECUC ID
EthIfDevErrorDetect	1	[ECUC_EthIf_00004]
EthIfEnableCV2xApi	01	[ECUC_EthIf_00091]
EthlfEnableRxInterrupt	1	[ECUC_EthIf_00005]
EthIfEnableSecurityEventReporting	1	[ECUC_EthIf_00079]
EthIfEnableSignalQualityApi	1	[ECUC_EthIf_00076]
EthIfEnableTxInterrupt	1	[ECUC_EthIf_00006]
EthIfEnableWEthApi	01	[ECUC_EthIf_00075]
EthIfFwSupport	1	[ECUC_EthIf_00094]
EthIfGetAndResetMeasurementDataApi	1	[ECUC_EthIf_00072]
EthIfGetBaudRate	1	[ECUC_EthIf_00034]
EthIfGetCounterState	1	[ECUC_EthIf_00035]
EthlfGetCtrlldxList	1	[ECUC_EthIf_00070]
EthIfGetPortMacAddrVlanApi	01	[ECUC_EthIf_00108]
EthlfGetVlanldSupport	1	[ECUC_EthIf_00071]

Included Parameters		
Parameter Name	Multiplicity	ECUC ID
EthIfGlobalTimeSupport	1	[ECUC_EthIf_00039]
EthIfMainFunctionPeriod	1	[ECUC_EthIf_00023]
EthIfMainFunctionStatePeriod	01	[ECUC_EthIf_00056]
EthIfMaxTrcvsTotal	1	[ECUC_EthIf_00003]
EthIfPhcSupport	1	[ECUC_EthIf_00102]
EthIfPortStartupActiveTime	01	[ECUC_EthIf_00055]
EthIfPublicCddHeaderFile	0*	[ECUC_EthIf_00024]
EthIfRxIndicationIterations	01	[ECUC_EthIf_00030]
EthIfSetForwardingModeApi	1	[ECUC_EthIf_00062]
EthIfSignalQualityCheckPeriod	01	[ECUC_EthIf_00077]
EthIfStartAutoNegotiation	1	[ECUC_EthIf_00033]
EthIfSwitchManagementSupport	1	[ECUC_EthIf_00064]
EthIfSwitchOffPortTimeDelay	01	[ECUC_EthIf_00054]
EthIfTrcvLinkStateChgMainReload	1	[ECUC_EthIf_00009]
EthlfVerifyConfigApi	1	[ECUC_EthIf_00063]
EthIfVersionInfoApi	1	[ECUC_EthIf_00007]
EthlfVersionInfoApiMacro	1	[ECUC_EthIf_00008]
EthIfWakeUpSupport	1	[ECUC_EthIf_00040]

Included Containers		
Container Name	Multiplicity	Scope / Dependency
EthIfSecurityEventRefs	01	Container for the references to IdsMEvent elements representing the security events that the Ethlf module shall report to the IdsM in case the coresponding security related event occurs (and if EthlfEnableSecurityEventReporting is set to "true"). The standardized security events in this container can be extended by vendor-specific security events. Tags: atp.Status=draft

Scope / Dependency	scope: local				

١

10.2.3 EthlfConfigSet

[ECUC_EthIf_00010] Definition of EcucParamConfContainerDef EthIfConfigSet \lceil

Container Name	EthlfConfigSet
Parent Container	Ethlf
Description	Collecting container for all parameters with post-build configuration classes.
Configuration Parameters	

No Included Parameters

Included Containers					
Container Name	Multiplicity	Scope / Dependency			
EthIfController	1*	This container contains the configuration of EthIfController.			
EthIfFrameConfig	1*	Configuration of an Ethernet frame.			
		Tags: atp.Status=draft			
EthIfPhysController	1*	This container contains the configuration of EthIfPhysController.			
		The usage of EthlfEthCtrlRef, EthlfCanXLCtrlRef, and EthlfWEth CtrlRef and EthlfCV2xCtrlRef is exclusive OR.			
EthIfRxIndicationConfig	1*	Configuration of receive callback functions.			
EthIfSwitch	0*	This container contains the configuration of EthIfSwitches.			

Included Containers					
Container Name Multiplicity S		Scope / Dependency			
EthlfSwitchPortGroup	0*	This container contains the configuration of EthIfSwitchPort Groups.			
		If EthIfSwitchPortGroups are controlled by PNC one EthIfSwitch PortGroup per PNC shall exist.			
		The host port shall be part of all EthlfSwitchPortGroups.			
		The up link port of a master switch and the up link port of the slave switch shall be part of all EthlfSwitchPortGroups that contain EthSwtPorts belonging to the slave switch.			
EthIfTransceiver	0*	This container contains the configuration of EthIfTransceiver.			
		The usage of EthlfEthTrcvRef, EthlfCanXLTrcvRef, and Ethlf WEthTrcvRef is exclusive OR.			
EthIfTrcvLinkStateChgConfig	1*	Specifies link state change callback function			
EthIfTxConfirmationConfig	0*	Configuration of transmit indication callback functions.			

1

10.2.4 EthlfController

[ECUC_EthIf_00025] Definition of EcucParamConfContainerDef EthIfController \lceil

Container Name	EthIfController
Parent Container	EthIfConfigSet
Description	This container contains the configuration of EthIfController.
Configuration Parameters	

Included Parameters			
Parameter Name	Multiplicity	ECUC ID	
EthlfCtrlldx	1	[ECUC_EthIf_00026]	
EthIfCtrlMtu	1	[ECUC_EthIf_00032]	
EthIfMacSecSupport	01	[ECUC_EthIf_00089]	
EthIfMaxTxBufsTotal	1	[ECUC_EthIf_00002]	
EthlfVlanId	01	[ECUC_EthIf_00029]	
EthIfEthTrcvRef	01	[ECUC_EthIf_00028]	
EthIfPaeInstanceRef	0254	[ECUC_EthIf_00090]	
EthIfPhysControllerRef	1	[ECUC_EthIf_00027]	
EthIfSwitchRefOrPortGroupRef	01	[ECUC_EthIf_00048]	

No Included Containers

[ECUC_EthIf_00026] Definition of EcucIntegerParamDef EthIfCtrlldx

Parameter Name	EthlfCtrlldx	EthlfCtrlldx		
Parent Container	EthlfController	EthIfController		
Description	Communication Controllers.	This parameter provides a zero-based consecutive index of the Ethernet Communication Controllers. Upper layer BSW modules and the EthIf itself use this index to identify a Ethernet CC.		
Multiplicity	1	1		
Туре	EcucIntegerParamDef (Symbol)	EcucIntegerParamDef (Symbolic Name generated for this parameter)

Please note: It is possible to have an EthIfController which do not reference any EthIfTransceiver or EthIfSwitch or EthIfSwitchPortGroup. This is used for a hardware topology where a PHY is controlled by e.g. hardware configuration (e.g. boot strap pins). In this case, the AUTOSAR communication stack would not access the PHY. The PHY will transit to normal mode as soon as the ECU is powered.

[SWS_EthIf_CONSTR_00006] EthIfTransceiver reference configuration constraint for EthIfControllers that refer to the same EthIfPhysController [All EthIfController which refer to the same EthIfPhysController where a <Eth|WEth|CanXL>CtrlDriver is referenced shall reference the same EthIfTransceiver

[SWS_EthIf_CONSTR_00007] EthIfTransceiver reference configuration constraint for an EthIfController that refer to an EthIfPhysController that reference a CanXLCtrlDriver [A EthIfTransceiver which reference a CanXL-TransceiverDriver shall be referenced only by a EthIfController which refer to EthIfPhysController that reference a CanXLCtrlDriver]

[SWS_EthIf_CONSTR_00008] EthIfTransceiver reference configuration constraint for an EthIfController that refer to an EthIfPhysController that reference an EthCtrlDriver [A EthIfTransceiver which reference a Eth-TransceiverDriver shall be referenced only by a EthIfController which refer to EthIfPhysController that reference a EthCtrlDriver

[SWS_EthIf_CONSTR_00009] EthIfTransceiver reference configuration constraint for an EthIfController that refer to an EthIfPhysController that reference a WEthCtrlDriver [A EthIfTransceiver which reference a WEth-TransceiverDriver shall be referenced only by a EthIfController which refer to EthIfPhysController that reference a WEthCtrlDriver

Note: A configuration which deviate from the constraints mentioned before shall be rated as invalid

10.3 Published Information

For details refer to the chapter 10.3 "Published Information" in SWS BSWGeneral [6].

A Not applicable requirements

[SWS_EthIf_00999]

Upstream requirements: SRS_BSW_00170

[These requirements are not applicable to this specification. |

B Change History

Please note that the lists in this chapter also include constraints and specification items that have been removed from the specification in a later version. These constraints and specification items do not appear as hyperlinks in the document.
